

Replacing lead supply pipe application form

Property owner's details

Name:

Address:

Postcode: Telephone no.

Account number:

Property address (to which application relates to if different than the address above)

Address:

Postcode:

This property is: House Flat/apartment Commercial Conversion

And is currently connected to: A common supply pipe*
A separate supply pipe

Do you have a water meter? Yes No

If yes, where is it fitted?

Please arrange to collect drinking water samples from the property to evaluate the levels of lead.

I confirm I have a full working kitchen with cold water tap complete with sink for flushing, there has been no building work going on in the property close to or on pipework within the last 6 weeks, and my property was not built after 1970.

I understand that if the results of these sample tests are less than the future lead standard of 10 ug/l then it is not necessary for any pipe replacement to be undertaken.

I understand that if the results of these sample tests are greater than the future lead standard then Thames Water Utilities Ltd will replace their communications pipe. In this case I intend to replace the existing lead supply pipe within the property and any internal pipework.

If the property is on a common supply pipe* I will provide a separate supply pipe to the boundary. Please supply a separate communications pipe to my property. I will remove the branches for the existing common supply pipe and note that if the pipe is not removed I will be liable for any costs to remove the pipework.
