1.93. COMPTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Hartslock Wood, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Ashridge Wood, Site of Special Scientific Interest As a whole 0% of COMPTON STW catchment, is designated either at an International, National or Local level. Intersects 10 areas of Priority Habitat which makes up 1 % of the COMPTON STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an	Medium

	important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 5 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of COMPTON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Groundwater Flooding In West Ilsley, East Ilsley, Compton, Chilton And West Hagbourne, Flood Alert Areas River Pang From East Ilsley To Pangbourne And Sulham Brook, Flood Alert Areas Of the total area of the catchment, 16 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of COMPTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land. Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 23 Communities at Risk Areas (flooding) Contains 6 Flood Warning Areas Contains 4 Flood Alert Areas		High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 127 Listed Buildings Intersects 6 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites		Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty High Weald, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park		High

As a whole 1 % of CRAWLEY STW catchment is designated either AONB or National Park.

1.97. CRICKLADE STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites North Meadow & Clattinger Farm, Special Area of Conservation (SAC) Within 2km there are 5 no. SSSI and/or NNR sites Cotswold Water Park, Site of Special Scientific Interest North Meadow, Cricklade, Site of Special Scientific Interest Elmlea Meadows, Site of Special Scientific Interest Upper Waterhay Meadow, Site of Special Scientific Interest North Meadow, Cricklade, National Nature Reserve As a whole 0% of CRICKLADE STW catchment, is designated either at an International, National or Local level. Intersects 14 areas of Priority Habitat which makes up 3 % of the CRICKLADE STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 12 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 2 religious grounds, 4 playing fields, 1 sports facility, 1 golf courses, 0 public parks and 1 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of CRICKLADE STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include:	Medium

	River Thames From Somerford Keynes To Cricklade, Flood Warning Areas River Thames From Ewen Down To And Including Cricklade, Flood Alert Areas Tributaries On The Upper River Thames Above Cricklade, Flood Alert Areas Of the total area of the catchment, 10 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of CRICKLADE STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of CRICKLADE STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 6 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 2 religious grounds, 1 playing fields, 1 sports facility, 0 golf course, 0 public park and 1 cemeteries Within 200 meters, there are 4 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) North Meadow & Clattinger Farm, Special Area of Conservation (SAC) North Meadow, Cricklade, National Nature Reserve Cotswold Water Park, Site of Special Scientific Interest North Meadow, Cricklade, Site of Special Scientific Interest Within 200 meters, there are 8 sensitive receptors (School and education centres, hospitals or residential care homes) St Sampson'S CoFe Primary School, Schools and Education centres None, Allotments St Sampson'S Church, Religious grounds St Mary'S Church, Religious grounds None, Playing fields None, Sports facility None, Golf course None, Cemeteries	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 2 Communities at Risk Areas (flooding) Contains 6 Flood Warning Areas Contains 20 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 110 Listed Buildings Intersects 9 areas designated as Scheduled Monuments	Medium

	Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of CRICKLADE STW catchment is designated either AONB or National Park. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of CUDDSDON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes	Medium

	Intersects 3 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 3 sensitive receptors (School and education centres, hospitals or residential care homes) None, Allotments All Saints' Church, Religious grounds None, Playing fields	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 1 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 25 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of CUDDSDON STW catchment is designated either AONB or National Park.	Low

1.102. CUDDINGTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Chilterns Beechwoods, Special Area of Conservation (SAC)	Medium

	Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of CUDDINGTON STW catchment, is designated either at an International, National or Local level. Intersects 1 areas of Priority Habitat which makes up less than 1 % of the CUDDINGTON STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 8 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 3 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 1 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of CUDDINGTON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: River Thames, Watercourses River Thames From Below Eythrope To Chiselhampton, Flood Warning Areas River Thames And Chalgrove Brook, Flood Alert Areas Of the total area of the catchment, 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a As a whole 99 % of CUDDINGTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of CUDDINGTON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 7 no areas utilised for recreation or which benefit the community. This includes 2 Allotments, 3 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 0 public park and 1 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 7 sensitive receptors (School and education centres, hospitals or residential care homes) Cuddington And Dinton Church Of England School, Schools and Education centres , Allotments St Nicholas' Church, Religious grounds St Nicholas'S Church, Religious grounds St Nicholas Church, Religious grounds , Playing fields , Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 87 Listed Buildings Intersects 1 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of CUDDINGTON STW catchment is designated either AONB or National Park.	Low

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 23 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing	Low

	pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of DANE END STW catchment is designated either AONB or National Park.	

1.107. DIDCOT STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 1 Locally designated sites (LNR) Mowbray Fields, Local Nature Reserve Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Little Wittenham, Special Area of Conservation (SAC) Cothill Fen, Special Area of Conservation (SAC) Hartslock Wood, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Aston Upthorpe Downs, Site of Special Scientific Interest As a whole less than 1% of DIDCOT STW catchment, is designated either at an International, National or Local level. Intersects 162 areas of Priority Habitat which makes up 3 % of the DIDCOT STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 105 areas currently utilised for recreation or which benefit the community. This includes 11 allotments, 14 religious grounds, 36 playing fields, 5 sports facility, 2 golf courses, 13 public parks and 8 cemeteries. Also within the catchment are 16 areas where vulnerable population groups would be expected. This includes 15 Schools and education centres, 1 hospitals, and 0 residential care homes. This is also reflected in the designation of 4 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of DIDCOT STW catchment 58% is classified as urban.	Medium
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of	Medium

	the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 11 statutory rivers / unnamed water bodies. Water environment features intersected include: Mill Brook, Watercourses Moor Ditch, Watercourses , Watercourses Hakka'S Brook, Watercourses River Thames At Clifton Hampden, Dorchester And Little Wittenham, Flood Warning Areas Ginge Brook Between Steventon And Sutton Courtenay, Including Milton And Drayton Mill Areas, Flood Warning Areas River Thames For The Abingdon Area, Flood Alert Areas River Thames And Its Tributaries From Days Lock To Above Pangbourne, Flood Alert Areas Ginge Brook, Flood Alert Areas Of the total area of the catchment, 2 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 77 % of DIDCOT STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of DIDCOT STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 13 no. sensitive receptors. This includes 12 Schools and education centres, 1 hospitals, and 0 residential care homes Intersects 70 no areas utilised for recreation or which benefit the community. This includes 8 Allotments, 12 religious grounds, 26 playing fields, 4 sports facility, 1 golf course, 13 public park and 6 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 32 sensitive receptors (School and education centres, hospitals or residential care homes) Northbourne Church Of England Primary School, Schools and Education centres All Saints Church Of England (Aided) Primary School, Schools and Education centres Blewbury Endowed Church Of England Primary School, Schools and Education centres Ladygrove Park Primary School, Schools and Education centres Willowcroft Community School, Schools and Education centres Hagbourne Church Of England Primary School, Schools and Education centres Didcot Manor Infants School, Schools and Education centres Manor School, Schools and Education centres Harwell Primary School, Schools and Education centres Milton Church Of England Primary School, Schools and Education centres	Medium

1.111. DRAYTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar)	Medium

	Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites Cothill Fen, Special Area of Conservation (SAC) Little Wittenham, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Culham Brake, Site of Special Scientific Interest As a whole 0% of DRAYTON STW catchment, is designated either at an International, National or Local level. Intersects 85 areas of Priority Habitat which makes up 3 % of the DRAYTON STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 28 areas currently utilised for recreation or which benefit the community. This includes 4 allotments, 6 religious grounds, 10 playing fields, 0 sports facility, 1 golf courses, 1 public parks and 2 cemeteries. Also within the catchment are 4 areas where vulnerable population groups would be expected. This includes 4 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of DRAYTON STW catchment 40% is classified as urban.	Medium
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 3 statutory rivers / unnamed water bodies. Water environment features intersected include: Ginge Brook, Watercourses Moor Ditch, Watercourses River Thames At Clifton Hampden, Dorchester And Little Wittenham, Flood Warning Areas River Thames At Culham, Flood Warning Areas Ginge Brook Between Steventon And Sutton Courtenay, Including Milton And Drayton Mill Areas, Flood Warning Areas River Thames For The Abingdon Area, Flood Alert Areas Ginge Brook, Flood Alert Areas Of the total area of the catchment, 15 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades:	Medium

	Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 59 % of DRAYTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of DRAYTON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 3 no. sensitive receptors. This includes 3 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 19 no areas utilised for recreation or which benefit the community. This includes 4 Allotments, 6 religious grounds, 5 playing fields, 0 sports facility, 1 golf course, 1 public park and 2 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 13 sensitive receptors (School and education centres, hospitals or residential care homes) None, Schools and Education centres Drayton Community Primary School, Schools and Education centres St Michael'S Church Of England Primary School, Schools and Education centres None, Allotments St Michael And All Angels' Church, Religious grounds None, Religious grounds All Saint'S Church, Religious grounds St Peter'S Church, Religious grounds St Blaise'S Church, Religious grounds None, Playing fields None, Golf course The Green, Public park None, Cemeteries	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 4 Communities at Risk Areas (flooding) Contains 19 Flood Warning Areas Contains 104 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 150 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing	Low

	pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of DRAYTON STW catchment is designated either AONB or National Park.	

1.112. EARLSWOOD STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 1 Internationally designated sites (SPA, SAC, Ramsar) Mole Gap To Reigate Escarpment, Special Area of Conservation (SAC) Intersects 2 Nationally designated sites (SSSI and NNR) Reigate Heath, Site of Special Scientific Interest Mole Gap To Reigate Escarpment, Site of Special Scientific Interest Intersects 2 Locally designated sites (LNR) Earlswood Common, Local Nature Reserve Reigate Heath, Local Nature Reserve Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Mole Gap To Reigate Escarpment, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Reigate Heath, Site of Special Scientific Interest Mole Gap To Reigate Escarpment, Site of Special Scientific Interest As a whole less than 1% of EARLSWOOD STW catchment, is designated either at an International, National or Local level. Intersects 401 areas of Priority Habitat which makes up 3 % of the EARLSWOOD STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 128 areas currently utilised for recreation or which benefit the community. This includes 15 allotments, 15 religious grounds, 32 playing fields, 4 sports facility, 8 golf courses, 31 public parks and 5 cemeteries. Also within the catchment are 18 areas where vulnerable population groups would be expected. This includes 17 Schools and education centres, 1 hospitals, and 0 residential care homes. This is also reflected in the designation of 30 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of EARLSWOOD STW catchment 84% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of	High

	the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 9 statutory rivers / unnamed water bodies. Water environment features intersected include:																	
	<table><tr><td>, Watercourses</td><td>Salfords Stream At Salfords, Flood Warning</td></tr><tr><td>Earlswood Brook, Watercourses</td><td>Areas</td></tr><tr><td>Salfords Stream, Watercourses</td><td>Redhill Brook At Redhill And Salfords Stream</td></tr><tr><td>Nutfield Brook, Watercourses</td><td>At Salfords, Flood Alert Areas</td></tr><tr><td>Redhill Brook, Watercourses</td><td>River Mole And Its Tributaries</td></tr><tr><td>Redhill Brook At Redhill, Flood Warning</td><td>From Kinnersley Manor To South Hersham,</td></tr><tr><td>Areas</td><td>Flood Alert Areas</td></tr></table> Of the total area of the catchment, 4 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	, Watercourses	Salfords Stream At Salfords, Flood Warning	Earlswood Brook, Watercourses	Areas	Salfords Stream, Watercourses	Redhill Brook At Redhill And Salfords Stream	Nutfield Brook, Watercourses	At Salfords, Flood Alert Areas	Redhill Brook, Watercourses	River Mole And Its Tributaries	Redhill Brook At Redhill, Flood Warning	From Kinnersley Manor To South Hersham,	Areas	Flood Alert Areas

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 2 Communities at Risk Areas (flooding) Contains 17 Flood Warning Areas Contains 17 Flood Alert Areas		High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 125 Listed Buildings Intersects 1 areas designated as Scheduled Monuments Intersects 4 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites		Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Chilterns, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 1 % of EAST HYDE STW catchment is designated either AONB or National Park.		High

1.115. EAST ILSLEY STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of EAST ILSLEY STW catchment, is designated either at an International, National or Local level. Intersects 7 areas of Priority Habitat which makes up 2 % of the EAST ILSLEY STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 7 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 2 religious grounds, 2 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of EAST ILSLEY STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Groundwater Flooding In West Ilsley, East Ilsley, Compton, Chilton And West Hagbourne, Flood Alert Areas River Pang From East Ilsley To Pangbourne And Sulham Brook, Flood Alert Areas Of the total area of the catchment, 2 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as	Medium

	contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of EAST ILSLEY STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of EAST ILSLEY STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 5 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 2 religious grounds, 2 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 6 sensitive receptors (School and education centres, hospitals or residential care homes) The Ilsleys Primary School, Schools and Education centres None, Allotments St Mary'S Church, Religious grounds All Saints' Church, Religious grounds None, Playing fields Millennium Green, Public park	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 20 Communities at Risk Areas (flooding) Contains 5 Flood Warning Areas Contains 26 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 81 Listed Buildings Intersects 3 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Surrey Hills, Area of Outstanding Natural Beauty Intersects 1 areas designated as National Park South Downs, National Park As a whole 84 % of ELSTEAD STW catchment is designated either AONB or National Park.	High

1.119. ESHER STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 2 Internationally designated sites (SPA, SAC, Ramsar) South West London Waterbodies, RAMSAR site South West London Waterbodies, (SPA) Intersects 2 Nationally designated sites (SSSI and NNR) Knight & Bessborough Reservoirs, SSSI Esher Commons, SSSI Intersects 6 Locally designated sites (LNR) Old Common (Map To Be Verified), LNR Claygate Common, LNR West End Common, LNR Within 10km there are 7 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Richmond Park, (SAC) Mole Gap To Reigate Escarpment, (SAC) Wimbledon Common, (SAC) Within 2km there are 8 no. SSSI and/or NNR sites Knight & Bessborough Reservoirs, SSSI Esher Commons, SSSI Esher Common, LNR Stokes Field, LNR Molesey Heath, LNR Thursley, Ash, Pirbright & Chobham, (SAC) South West London Waterbodies, (SPA) Thames Basin Heaths, (SPA) Ockham And Wisley Commons, SSSI Bookham Commons, SSSI	High

	Bushy Park And Home Park, SSSI Kempton Park Reservoirs, SSSI Epsom And Ashtead Commons, SSSI Ashtead Common, NNR As a whole less than 1% of ESHER STW catchment, is designated either at an International, National or Local level. Intersects 536 areas of Priority Habitat which makes up 4 % of the ESHER STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 223 areas currently utilised for recreation or which benefit the community. This includes 22 allotments, 27 religious grounds, 52 playing fields, 12 sports facility, 24 golf courses, 50 public parks and 6 cemeteries. Also within the catchment are 30 areas where vulnerable population groups would be expected. This includes 27 Schools and education centres, 3 hospitals, and 0 residential care homes. This is also reflected in the designation of 36 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of ESHER STW catchment 91% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 4 Drinking Water Safeguard Zones Intersects 19 statutory rivers / unnamed water bodies. Water environment features intersected include: The Rythe, Watercourses , Watercourses River Mole, Watercourses Dead River, Watercourses River Mole At Esher And East Molesey, Flood Warning Areas Properties Closest To The River Thames At Sunbury, Flood Warning Areas Properties Closest To The River Thames From Platts Eyot To Hampton Court Bridge, Flood Warning Areas River Mole At Stoke D'Abernon, Cobham And South Hersham, Flood Warning Areas River Rythe Between Oxshott And Thames Ditton, Flood Warning Areas River Thames At East And West Molesey, Flood Warning Areas River Thames At Thames Ditton Island, Flood Warning Areas River Thames At Walton, Flood Warning Areas River Thames At Thames Ditton, Flood Warning Areas Lower River Mole Area At Esher And East Molesey, Flood Alert Areas River Thames From Shepperton To Molesey, Flood Alert Areas River Thames At Thames Ditton Island, Flood Alert Areas River Rythe From Oxshott To Thames Ditton, Flood Alert Areas River Mole And Its Tributaries From Kinnersley Manor To South Hersham, Flood Alert Areas River Thames From Hampton And Thames Ditton To Teddington, Flood Alert Areas Of the total area of the catchment, 19 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades:	High

	Grade 1, Soil grade 1 Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 89 % of ESHER STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.																																																																																								
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 6 no. areas designated as Air Quality Management Area as follows: Kingston Upon Thames Aqma, AQMA Hinchley Wood Aqma, AQMA Esher Aqma, AQMA Hampton Court Aqma, AQMA Walton Road, Molesey Aqma, AQMA Walton Aqma, AQMA AQMAs constitute 1 % area of ESHER STW catchment. Intersects 13 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 29 no. sensitive receptors. This includes 26 Schools and education centres, 3 hospitals, and 0 residential care homes Intersects 146 no areas utilised for recreation or which benefit the community. This includes 19 Allotments, 23 religious grounds, 38 playing fields, 11 sports facility, 18 golf course, 31 public park and 6 cemeteries Within 200 meters, there are 5 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) South West London Waterbodies, RAMSAR site South West London Waterbodies, (SPA) Knight & Bessborough Reservoirs, SSSI Esher Commons, SSSI Bushy Park And Home Park, SSSI Within 200 meters, there are 75 sensitive receptors (School and education centres, hospitals or residential care homes) <table><tr><td>Esher Church Of England Primary School</td><td>St Paul'S Roman Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A	High

	breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Wicklesham And Coxwell Pits, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 1 no. SSSI and/or NNR sites Wicklesham And Coxwell Pits, Site of Special Scientific Interest As a whole less than 1% of FARINGDON STW catchment, is designated either at an International, National or Local level. Intersects 20 areas of Priority Habitat which makes up 1 % of the FARINGDON STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 22 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 3 religious grounds, 9 playing fields, 1 sports facility, 1 golf courses, 2 public parks and 2 cemeteries. Also within the catchment are 2 areas where vulnerable population groups would be expected. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of FARINGDON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Ock From Watchfield To Abingdon, And Also The Letcombe Brook At Wantage, Grove And East Hanney, Flood Alert Areas River Thames And Tributaries From Buscot Wick Down To Kings Lock, Flood Alert Areas Of the total area of the catchment, less than 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 89 % of FARINGDON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium

Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of FARINGDON STW catchment. Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 2 no. sensitive receptors. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 16 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 3 religious grounds, 7 playing fields, 1 sports facility, 0 golf course, 2 public park and 2 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Wicklesham And Coxwell Pits, Site of Special Scientific Interest Within 200 meters, there are 11 sensitive receptors (School and education centres, hospitals or residential care homes) Faringdon Infants School, Schools and Education centres Faringdon Junior School, Schools and Education centres None, Allotments St Mary'S Church, Religious grounds St Giles'S Church, Religious grounds All Saints' Church, Religious grounds None, Playing fields None, Sports facility Folly Park, Public park None, Public park None, Cemeteries	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 1 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 46 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 148 Listed Buildings Intersects 1 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of FARINGDON STW catchment is designated either AONB or National Park.	Low

Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades:	Medium

	Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 95 % of FIDDLERS HAMLET STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 1 no. areas designated as Air Quality Management Area as follows: Aqma (Epping Forest District Council) No2, AQMA AQMAs constitute less than 1 % area of FIDDLERS HAMLET STW catchment. Intersects 3 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 4 no. sensitive receptors. This includes 3 Schools and education centres, 1 hospitals, and 0 residential care homes Intersects 14 no areas utilised for recreation or which benefit the community. This includes 4 Allotments, 1 religious grounds, 6 playing fields, 0 sports facility, 2 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Epping Forest, Special Area of Conservation (SAC) Epping Forest, Site of Special Scientific Interest Within 200 meters, there are 12 sensitive receptors (School and education centres, hospitals or residential care homes) Epping Primary School, Schools and Education centres Ivy Chimneys Primary School, Schools and Education centres Coopersale And Theydon Garnon Church Of England (Voluntary Controlled) Primary School, Schools and Education centres St Margaret'S Hospital, Hospitals None, Allotments St Alban'S Church, Religious grounds None, Playing fields None, Sports facility Hobbs Cross Golf Centre, Golf course None, Golf course None, Public park None, Cemeteries	High
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 2 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 38 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 65 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst	Low

	integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of FIDDLERS HAMLET STW catchment is designated either AONB or National Park.	

1.127. FINSTOCK STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 2 Nationally designated sites (SSSI and NNR) Stonesfield Slate Mines, Site of Special Scientific Interest Stonesfield Common, Bottoms & Banks, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Oxford Meadows, Special Area of Conservation (SAC) Within 2km there are 9 no. SSSI and/or NNR sites Stonesfield Slate Mines, Site of Special Scientific Interest Stonesfield Common, Bottoms & Banks, Site of Special Scientific Interest Reed Hill, Site of Special Scientific Interest Wychwood, Site of Special Scientific Interest Whitehill Wood, Site of Special Scientific Interest Salt Way, Ditchley, Site of Special Scientific Interest Holly Court Bank, Site of Special Scientific Interest Sturt Copse, Site of Special Scientific Interest Wychwood, National Nature Reserve As a whole less than 1% of FINSTOCK STW catchment, is designated either at an International, National or Local level. Intersects 59 areas of Priority Habitat which makes up 3 % of the FINSTOCK STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 21 areas currently utilised for recreation or which benefit the community. This includes 5 allotments, 4 religious grounds, 6 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 2 cemeteries. Also within the catchment are 3 areas where vulnerable population groups would be expected. This includes 3 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium

Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of FINSTOCK STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Evenlode From Moreton In Marsh To Cassington And Also The River Glyme At Wootton And Woodstock, Flood Alert Areas Of the total area of the catchment, less than 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 88 % of FINSTOCK STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium

Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 3 no. SSSI and/or NNR sites Hillcollins Pit, Site of Special Scientific Interest Great Hornead Park, Site of Special Scientific Interest Patmore Heath, Site of Special Scientific Interest As a whole 0% of FURNEUX PELHAM STW catchment, is designated either at an International, National or Local level. Intersects 5 areas of Priority Habitat which makes up 1 % of the FURNEUX PELHAM STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the	Medium

	environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 3 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of FURNEUX PELHAM STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: River Ash, Watercourses River Ash At Furneux Pelham, Flood Warning Areas River Ash In Hertfordshire, Flood Alert Areas Of the total area of the catchment, 14 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of FURNEUX PELHAM STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of FURNEUX PELHAM STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 1 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Within 200 meters, there are 3 sensitive receptors (School and education centres, hospitals or residential care homes) Furneux Pelham Church Of England School, Schools and Education centres None, Allotments St Mary'S Church, Religious grounds	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 1 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 23 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of FURNEUX PELHAM STW catchment is designated either AONB or National Park.	Low

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 114 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 26 Flood Alert Areas		High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 304 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 2 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites		Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Surrey Hills, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 10 % of GODALMING STW catchment is designated either AONB or National Park.		High

1.136. GORING STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites Hartslock Wood, Special Area of Conservation (SAC) Little Wittenham, Special Area of Conservation (SAC) Within 2km there are 7 no. SSSI and/or NNR sites Bear, Oveys & Great Bottom Woods, Site of Special Scientific Interest Holies Down, Site of Special Scientific Interest Lardon Chase, Site of Special Scientific Interest Hartslock, Site of Special Scientific Interest	Medium

	Moulsford Downs, Site of Special Scientific Interest Berins Hill Bank, Site of Special Scientific Interest Warren Bank, Site of Special Scientific Interest As a whole 0% of GORING STW catchment, is designated either at an International, National or Local level. Intersects 113 areas of Priority Habitat which makes up 4 % of the GORING STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 32 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 10 religious grounds, 10 playing fields, 2 sports facility, 1 golf courses, 1 public parks and 1 cemeteries. Also within the catchment are 5 areas where vulnerable population groups would be expected. This includes 5 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 4 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of GORING STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 3 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 2 statutory rivers / unnamed water bodies. Water environment features intersected include: River Thames, Watercourses , Watercourses River Thames From Days Lock Down To South Stoke, Flood Warning Areas River Thames At Goring And Streatley, Flood Warning Areas River Thames And Its Tributaries From Days Lock To Above Pangbourne, Flood Alert Areas Of the total area of the catchment, 8 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 97 % of GORING STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows;	Medium

	Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of GORING STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 5 no. sensitive receptors. This includes 5 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 20 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 8 religious grounds, 8 playing fields, 1 sports facility, 1 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Bear, Oveys & Great Bottom Woods, Site of Special Scientific Interest Within 200 meters, there are 18 sensitive receptors (School and education centres, hospitals or residential care homes) <table><tr><td>South Stoke Primary School, Schools and Education centres</td><td>St John Evangelist Church, Religious grounds</td></tr><tr><td>Goring Church Of England Primary School, Schools and Education centres</td><td>St Peter And St Paul'S Church, Religious grounds</td></tr><tr><td>Woodcote Primary School, Schools and Education centres</td><td>St Andrew'S Church, Religious grounds</td></tr><tr><td>Checkendon C Of E Primary School, Schools and Education centres</td><td>St Leonard'S Church, Religious grounds</td></tr><tr><td>Stoke Row Church Of England School, Schools and Education centres</td><td>Roman Catholic Church Of Christ The King, Religious grounds</td></tr><tr><td>None, Allotments</td><td>None, Religious grounds</td></tr><tr><td>St Paul'S Church, Religious grounds</td><td>None, Playing fields</td></tr><tr><td>Stoke Row Chapel, Religious grounds</td><td>None, Sports facility</td></tr><tr><td></td><td>None, Golf course</td></tr><tr><td></td><td>The Rectory Garden, Public park</td></tr></table>	South Stoke Primary School, Schools and Education centres	St John Evangelist Church, Religious grounds	Goring Church Of England Primary School, Schools and Education centres	St Peter And St Paul'S Church, Religious grounds	Woodcote Primary School, Schools and Education centres	St Andrew'S Church, Religious grounds	Checkendon C Of E Primary School, Schools and Education centres	St Leonard'S Church, Religious grounds	Stoke Row Church Of England School, Schools and Education centres	Roman Catholic Church Of Christ The King, Religious grounds	None, Allotments	None, Religious grounds	St Paul'S Church, Religious grounds	None, Playing fields	Stoke Row Chapel, Religious grounds	None, Sports facility		None, Golf course		The Rectory Garden, Public park

The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a As a whole 100 % of GREATWORTH STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of GREATWORTH STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 4 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 2 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 5 sensitive receptors (School and education centres, hospitals or residential care homes) Greatworth Primary School, Schools and Education centres None, Allotments St Lawrence'S Church, Religious grounds St Peter'S Church, Religious grounds None, Playing fields	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 1 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 13 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 49 Listed Buildings Intersects 0 areas designated as Scheduled Monuments	Low

	Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of GREATWORTH STW catchment is designated either AONB or National Park.	Low

1.141. GREENHAM COMMON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Greenham And Crookham Commons, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Kennet & Lambourn Floodplain, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Kennet Valley Alderwoods, Special Area of Conservation (SAC) Within 2km there are 4 no. SSSI and/or NNR sites Greenham And Crookham Commons, Site of Special Scientific Interest Bowdown And Chamberhouse Woods, Site of Special Scientific Interest River Kennet, Site of Special Scientific Interest Thatcham Reed Beds, Site of Special Scientific Interest As a whole 6% of GREENHAM COMMON STW catchment, is designated either at an International, National or Local level. Intersects 34 areas of Priority Habitat which makes up 13 % of the GREENHAM COMMON STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 4 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 3 playing fields, 0 sports facility, 1 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium

Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of GREENHAM COMMON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: River Enborne, Watercourses River Enborne From Gore End Down To Aldermaston, Flood Warning Areas River Enborne And Foudry Brook, Flood Alert Areas Of the total area of the catchment, 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 9 % of GREENHAM COMMON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of GREENHAM COMMON STW catchment. Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 3 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 3 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Greenham And Crookham Commons, Site of Special Scientific Interest Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) None, Playing fields	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 3 Communities at Risk Areas (flooding) Contains 6 Flood Warning Areas Contains 25 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are	Low

	recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 2 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. 1.145. HADDENHAM STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites Chilterns Beechwoods, Special Area of Conservation (SAC) Aston Rowant, Special Area of Conservation (SAC) Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of HADDENHAM STW catchment, is designated either at an International, National or Local level. Intersects 20 areas of Priority Habitat which makes up 2 % of the HADDENHAM STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 12 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 3 religious grounds, 4 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 1 cemeteries.	Medium

	Also within the catchment are 3 areas where vulnerable population groups would be expected. This includes 3 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of HADDENHAM STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: Cuttle Brook, Watercourses River Thame And Chalgrove Brook, Flood Alert Areas Of the total area of the catchment, less than 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a As a whole 96 % of HADDENHAM STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of HADDENHAM STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 3 no. sensitive receptors. This includes 3 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 8 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 3 religious grounds, 3 playing fields, 0 sports facility, 0 golf course, 0 public park and 1 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 9 sensitive receptors (School and education centres, hospitals or residential care homes) Haddenham St Mary'S Ce School, Schools and Education centres Haddenham County First School, Schools and Education centres Haddenham Junior School, Schools and Education centres None, Allotments St Mary'S Church, Religious grounds St Nicholas'S Church, Religious grounds St Michael'S Church, Religious grounds	Medium

	None, Playing fields None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 1 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 11 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 130 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of HADDENHAM STW catchment is designated either AONB or National Park.	Low

1.146. HAM HILL STW Catchment

Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Oldbury And Seal Chart, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 4 no. SSSI and/or NNR sites Oldbury And Seal Chart, Site of Special Scientific Interest One Tree Hill And Bitchet Common, Site of Special Scientific Interest Halling To Trottscliffe Escarpment, Site of Special Scientific Interest Knole Park, Site of Special Scientific Interest As a whole less than 1% of HAM HILL (SW) STW catchment, is designated either at an International, National or Local level. Intersects 44 areas of Priority Habitat which makes up 7 % of the HAM HILL (SW) STW catchment area.	High

Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following: 9 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 3 religious grounds, 3 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 0 cemeteries. Also within the catchment are 2 areas where vulnerable population groups would be expected. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. 	Intersects 0 areas designated as National Park	
	As a whole 96 % of HAMSTEAD MARSHALL STW catchment is designated either AONB or National Park.	

1.150. HANNINGTON (WILTS) STW Catchment

Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of HANNINGTON (WILTS) STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the HANNINGTON (WILTS) STW catchment area.	Low
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of HANNINGTON (WILTS) STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include:	Medium

	, Watercourses Bydemill Brook, Watercourses Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of HANNINGTON (WILTS) STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of HANNINGTON (WILTS) STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 1 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) , Playing fields	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 4 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty	Low

	Intersects 0 areas designated as National Park	
	As a whole 0 % of HANNINGTON (WILTS) STW catchment is designated either AONB or National Park.

Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 1 Internationally designated sites (SPA, SAC, Ramsar) Wealden Heaths Phase II, Special Protection Area (SPA) Intersects 1 Nationally designated sites (SSSI and NNR) Devil's Punch Bowl, Site of Special Scientific Interest Intersects 1 Locally designated sites (LNR) Lynchmere Commons, Local Nature Reserve Within 10km there are 7 no. SPAs, SACs and/or Ramsar sites Thursley & Ockley Bogs, RAMSAR site Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Area of Conservation (SAC) Woolmer Forest, Special Area of Conservation (SAC) Ebernoe Common, Special Area of Conservation (SAC) Within 2km there are 3 no. SSSI and/or NNR sites	High

	Devil'S Punch Bowl, Site of Special Scientific Interest Bramshott And Ludshott Commons, Site of Special Scientific Interest Perry Copse Outcrops, Site of Special Scientific Interest As a whole less than 1% of HASLEMERE STW catchment, is designated either at an International, National or Local level. Intersects 441 areas of Priority Habitat which makes up 13 % of the HASLEMERE STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 41 areas currently utilised for recreation or which benefit the community. This includes 3 allotments, 5 religious grounds, 13 playing fields, 1 sports facility, 0 golf courses, 6 public parks and 6 cemeteries. Also within the catchment are 7 areas where vulnerable population groups would be expected. This includes 5 Schools and education centres, 2 hospitals, and 0 residential care homes. This is also reflected in the designation of 3 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of HASLEMERE STW catchment 79% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 3 areas of Source Protections Zones 1 and 2 Intersects 4 Drinking Water Safeguard Zones Intersects 14 statutory rivers / unnamed water bodies. Water environment features intersected include: River Wey, Watercourses , Watercourses Groundwater Flooding In The Haslemere And Churt Areas, Flood Alert Areas Upper River Wey, Flood Alert Areas Of the total area of the catchment, less than 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 64 % of HASLEMERE STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows:	Medium

	AQMAs constitute 0 % area of HASLEMERE STW catchment. Intersects 4 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 6 no. sensitive receptors. This includes 4 Schools and education centres, 2 hospitals, and 0 residential care homes Intersects 29 no areas utilised for recreation or which benefit the community. This includes 2 Allotments, 5 religious grounds, 11 playing fields, 1 sports facility, 0 golf course, 6 public park and 4 cemeteries Within 200 meters, there are 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Wealden Heaths Phase II, Special Protection Area (SPA) Devil's Punch Bowl, Site of Special Scientific Interest Within 200 meters, there are 18 sensitive receptors (School and education centres, hospitals or residential care homes) Camelsdale Primary School, Schools and Education centres Shottermill Infant School, Schools and Education centres Shottermill Junior School, Schools and Education centres St Bartholomew's Church Of England (Aided) Primary School, Schools and Education centres Holy Cross Hospital, Hospitals Haslemere And District Hospital, Hospitals None, Allotments St Stephen's Church, Religious grounds St Michael's Church, Religious grounds St Paul's Church, Religious grounds St Bartholomew's Church, Religious grounds St Christopher's Church, Religious grounds None, Playing fields None, Sports facility Lion Green, Public park St Christopher's Green, Public park None, Public park None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 8 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 26 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 139 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Surrey Hills, Area of Outstanding Natural Beauty Intersects 1 areas designated as National Park South Downs, National Park As a whole 28 % of HASLEMERE STW catchment is designated either AONB or National Park.	High

1.155. HATFIELD HEATH STW Catchment

SEA Topic	Commentary	Sensitivity assigned

Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 1 no. SSSI and/or NNR sites Hatfield Forest, Site of Special Scientific Interest As a whole 0% of HATFIELD HEATH STW catchment, is designated either at an International, National or Local level. Intersects 18 areas of Priority Habitat which makes up 1 % of the HATFIELD HEATH STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of HIGHWORTH STW catchment is designated either AONB or National Park.	Low

1.159. HOCKFORD STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 2 Internationally designated sites (SPA, SAC, Ramsar) Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Thames Basin Heaths, Special Protection Area (SPA) Intersects 4 Nationally designated sites (SSSI and NNR) Ash To Brookwood Heaths, Site of Special Scientific Interest Basingstoke Canal, Site of Special Scientific Interest Colony Bog And Bagshot Heath, Site of Special Scientific Interest Whitmoor Common, Site of Special Scientific Interest Intersects 2 Locally designated sites (LNR) Fox Corner, Local Nature Reserve Whitmoor & Rickford Commons, Local Nature Reserve Within 10km there are 5 no. SPAs, SACs and/or Ramsar sites Thursley & Ockley Bogs, RAMSAR site Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Thames Basin Heaths, Special Protection Area (SPA) Thursley, Hankley & Frensham Commons, Special Protection Area (SPA) Wealden Heaths Phase II, Special Protection Area (SPA)	High

	Within 2km there are 6 no. SSSI and/or NNR sites Ash To Brookwood Heaths, Site of Special Scientific Interest Basingstoke Canal, Site of Special Scientific Interest Colony Bog And Bagshot Heath, Site of Special Scientific Interest Whitmoor Common, Site of Special Scientific Interest Puttenham & Crooksbury Commons, Site of Special Scientific Interest Smart'S And Prey Heaths, Site of Special Scientific Interest As a whole less than 1% of HOCKFORD STW catchment, is designated either at an International, National or Local level. Intersects 302 areas of Priority Habitat which makes up 7 % of the HOCKFORD STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 65 areas currently utilised for recreation or which benefit the community. This includes 3 allotments, 7 religious grounds, 24 playing fields, 0 sports facility, 9 golf courses, 11 public parks and 2 cemeteries. Also within the catchment are 9 areas where vulnerable population groups would be expected. This includes 7 Schools and education centres, 2 hospitals, and 0 residential care homes. This is also reflected in the designation of 8 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of HOCKFORD STW catchment 38% is classified as urban.	Medium
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 7 Drinking Water Safeguard Zones Intersects 26 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Stanford Brook, Watercourses Hoe Stream, Watercourses Hodge Brook, Watercourses Basingstoke Canal, Watercourses Hoe Stream, Flood Alert Areas Of the total area of the catchment, 5 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 47 % of HOCKFORD STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter	Medium

	controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of HOCKFORD STW catchment. Intersects 17 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 6 no. sensitive receptors. This includes 6 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 37 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 7 religious grounds, 14 playing fields, 0 sports facility, 7 golf course, 8 public park and 0 cemeteries Within 200 meters, there are 6 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Thames Basin Heaths, Special Protection Area (SPA) Ash To Brookwood Heaths, Site of Special Scientific Interest Basingstoke Canal, Site of Special Scientific Interest Colony Bog And Bagshot Heath, Site of Special Scientific Interest Whitmoor Common, Site of Special Scientific Interest Within 200 meters, there are 29 sensitive receptors (School and education centres, hospitals or residential care homes) Guildford Grove Primary School, Schools and Education centres St John The Baptist'S Church, Religious grounds Puttenham C Of E Infant School, Schools and Education centres St Michael And All Angels Church, Religious grounds Wyke Primary School, Schools and Education centres St Clare'S Church, Religious grounds Pirbright Village Primary School, Schools and Education centres St Mark'S Church, Religious grounds Worplesdon Primary School, Schools and Education centres St Mary'S Church, Religious grounds St Joseph'S Roman Catholic Primary School, Schools and Education centres None, Playing fields Wood Street Infant School, Schools and Education centres Merrist Wood Golf Club, Golf course Royal Surrey County Hospital, Hospitals None, Golf course Nuffield Health Guildford Hospital, Hospitals Worplesdon Golf Course, Golf course None, Allotments Broadstreet Common, Public park St Albans Church, Religious grounds Wood Street Green, Public park St Bartholomew'S Church, Religious grounds Fox Corner, Public park grounds Cook'S Green, Public park Pirbright Green, Public park Park Barn, Public park None, Public park Brookwood Cemetery, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 111 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 2 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 95 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens	Low

	Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Surrey Hills, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 6 % of HOCKFORD STW catchment is designated either AONB or National Park.	High

1.160. HOLMWOOD STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Intersects 9 no. sensitive receptors. This includes 7 Schools and education centres, 2 hospitals, and 0 residential care homes Intersects 23 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 6 religious grounds, 10 playing fields, 1 sports facility, 0 golf course, 3 public park and 2 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Glover'S Wood, Site of Special Scientific Interest Within 200 meters, there are 22 sensitive receptors (School and education centres, hospitals or residential care homes) Charlwood Village Infant School, Schools and Education centres Meath Green Infant School, Schools and Education centres Meath Green Junior School, Schools and Education centres Yattendon School, Schools and Education centres Horley Infant School, Schools and Education centres Langshott Infant School, Schools and Education centres Manorfield Primary And Nursery School, Schools and Education centres Spire Gatwick Park Hospital, Hospitals Farmfield, Hospitals None, Allotments St Bartholomew'S Church, Religious grounds St Francis Church, Religious grounds Roman Catholic Church Of The English Martyrs, Religious grounds St Nicholas'S Church, Religious grounds Providence Chapel, Religious grounds Lee Street Church, Religious grounds None, Playing fields None, Sports facility Church Meadow, Public park None, Public park Riverside Garden Park, Public park None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 23 Communities at Risk Areas (flooding) Contains 6 Flood Warning Areas Contains 4 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 90 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of HORLEY (SURREY) STW catchment is designated either AONB or National Park.	Low

1.164. HORNTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of HORNTON STW catchment, is designated either at an International, National or Local level. Intersects 5 areas of Priority Habitat which makes up less than 1 % of the HORNTON STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 5 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of HORNTON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as	Medium

	contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of HORNTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of HORNTON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 4 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 5 sensitive receptors (School and education centres, hospitals or residential care homes) Hornton Primary School, Schools and Education centres , Allotments St John The Baptist'S Church, Religious grounds , Playing fields The Green, Public park	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of IRONSBOTTOM STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of IRONSBOTTOM STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 1 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) None, Religious grounds	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 4 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 1 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of IRONSBOTTOM STW catchment is designated either AONB or National Park.	Low

1.169. ISLIP STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Oxford Meadows, Special Area of Conservation (SAC)	Medium

	Within 2km there are 3 no. SSSI and/or NNR sites Woodeaton Quarry, Site of Special Scientific Interest Woodeaton Wood, Site of Special Scientific Interest Otmoor, Site of Special Scientific Interest As a whole 0% of ISLIP STW catchment, is designated either at an International, National or Local level. Intersects 13 areas of Priority Habitat which makes up 4 % of the ISLIP STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 9 areas currently utilised for recreation or which benefit the community. This includes 3 allotments, 2 religious grounds, 2 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 1 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of ISLIP STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 3 statutory rivers / unnamed water bodies. Water environment features intersected include: River Ray, Watercourses River Ray For Islip, Flood Warning Areas River Ray And Its Tributaries From Shipton Lee To And Including Islip, Flood Alert Areas Of the total area of the catchment, 12 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 45 % of ISLIP STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of ISLIP STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 4 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 2 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 6 sensitive receptors (School and education centres, hospitals or residential care homes) Dr South'S Church Of England (Voluntary Aided) Primary School, Schools and Education centres None, Allotments St Giles'S Church, Religious grounds St Nicholas'S Church, Religious grounds None, Playing fields None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 1 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 15 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 42 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of KINGS SUTTON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 2 no. sensitive receptors. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 14 no areas utilised for recreation or which benefit the community. This includes 5 Allotments, 4 religious grounds, 5 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 9 sensitive receptors (School and education centres, hospitals or residential care homes) Kings Sutton Primary School, Schools and Education centres Newbottle And Charlton Church Of England Primary School, Schools and Education centres None, Allotments King'S Sutton Baptist Church, Religious grounds St Peter And St Paul'S Church, Religious grounds St Michael'S Church, Religious grounds St Mary'S Church, Religious grounds None, Playing fields None, Cemeteries	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 4 Communities at Risk Areas (flooding) Contains 8 Flood Warning Areas Contains 13 Flood Alert Areas	High

Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 114 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of KINGS SUTTON STW catchment is designated either AONB or National Park.	Low

1.174. KINGSCLERE STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Kennet & Lambourn Floodplain, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Kennet Valley Alderwoods, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Greenham And Crookham Commons, Site of Special Scientific Interest Bowdown And Chamberhouse Woods, Site of Special Scientific Interest As a whole 0% of KINGSCLERE STW catchment, is designated either at an International, National or Local level. Intersects 59 areas of Priority Habitat which makes up 3 % of the KINGSCLERE STW catchment area.	Medium
Population and human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following;	High

	24 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 3 religious grounds, 7 playing fields, 1 sports facility, 6 golf courses, 0 public parks and 3 cemeteries. Also within the catchment are 2 areas where vulnerable population groups would be expected. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 5 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of KINGSCLERE STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 7 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Enborne From Gore End Down To Aldermaston, Flood Warning Areas River Enborne And Foudry Brook, Flood Alert Areas Of the total area of the catchment, 3 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 93 % of KINGSCLERE STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium

1.178. LEATHERHEAD STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 3 Nationally designated sites (SSSI and NNR) Bookham Commons, Site of Special Scientific Interest Epsom And Ashtead Commons, Site of Special Scientific Interest Ashtead Common, National Nature Reserve Intersects 3 Locally designated sites (LNR) Ashtead Park, Local Nature Reserve River Mole, Local Nature Reserve Epsom Common, Local Nature Reserve Within 10km there are 4 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Mole Gap To Reigate Escarpment, Special Area of Conservation (SAC) Thames Basin Heaths, Special Protection Area (SPA) South West London Waterbodies, Special Protection Area (SPA) Within 2km there are 6 no. SSSI and/or NNR sites Bookham Commons, Site of Special Scientific Interest Epsom And Ashtead Commons, Site of Special Scientific Interest Mole Gap To Reigate Escarpment, Site of Special Scientific Interest Esher Commons, Site of Special Scientific Interest Ranmore Common, Site of Special Scientific Interest Ashtead Common, National Nature Reserve As a whole less than 1% of LEATHERHEAD STW catchment, is designated either at an International, National or Local level. Intersects 319 areas of Priority Habitat which makes up 3 % of the LEATHERHEAD STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 81 areas currently utilised for recreation or which benefit the community. This includes 6 allotments, 13 religious grounds, 20 playing fields, 3 sports facility, 8 golf courses, 12 public parks and 2 cemeteries.	High

	Also within the catchment are 17 areas where vulnerable population groups would be expected. This includes 15 Schools and education centres, 2 hospitals, and 0 residential care homes. This is also reflected in the designation of 10 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of LEATHERHEAD STW catchment 87% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 5 Drinking Water Safeguard Zones Intersects 3 statutory rivers / unnamed water bodies. Water environment features intersected include: The Rye, Watercourses River Mole, Watercourses River Mole At Leatherhead And Fetcham, Flood Warning Areas River Mole And Its Tributaries From Kinnersley Manor To South Hersham, Flood Alert Areas Of the total area of the catchment, 3 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 86 % of LEATHERHEAD STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 1 no. areas designated as Air Quality Management Area as follows: Kingston Upon Thames Aqma, AQMA AQMA's constitute less than 1 % area of LEATHERHEAD STW catchment. Intersects 4 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 15 no. sensitive receptors. This includes 13 Schools and education centres, 2 hospitals, and 0 residential care homes Intersects 55 no areas utilised for recreation or which benefit the community. This includes 6 Allotments, 11 religious grounds, 16 playing fields, 2 sports facility, 7 golf course, 12 public park and 1 cemeteries Within 200 meters, there are 3 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Ashtead Common, National Nature Reserve Bookham Commons, Site of Special Scientific Interest Epsom And Ashtead Commons, Site of Special Scientific Interest Within 200 meters, there are 39 sensitive receptors (School and education centres, hospitals or residential care homes) Leatherhead Trinity School, Schools and Education centres West Ashtead Primary School, Schools and Education centres	High

	St Peter'S Roman Catholic Primary School, Schools and Education centres The Greville Primary School, Schools and Education centres St Giles Church Of England (Aided) Infant School, Schools and Education centres Barnett Wood Infant School, Schools and Education centres Polesden Lacey Infant School, Schools and Education centres Eastwick Infant School, Schools and Education centres Eastwick Junior School, Schools and Education centres Oakfield Junior School, Schools and Education centres Fetcham Village Infant School, Schools and Education centres The Dawnay Primary School, Schools and Education centres The Ashtead Hospital, Hospitals Leatherhead Hospital, Hospitals None, Allotments Our Lady And St Peter Roman Catholic Church, Religious grounds All Saints Church, Religious grounds St Mary And St Nicholas'S Church, Religious grounds None, Religious grounds Christ Church, Religious grounds St Mary'S Church, Religious grounds St Giles' Church, Religious grounds St Nicolas Church, Religious grounds Bookham United Reformed Church, Religious grounds Roman Catholic Church Of The Holy Spirit, Religious grounds Roman Catholic Church Of St Michael, Religious grounds None, Playing fields None, Sports facility Pachesham Golf Centre, Golf course Tyrrell'S Wood Golf Course, Golf course Leatherhead Golf Club, Golf course Woodcote Park, Golf course None, Public park Mansion Garden, Public park King George V Memorial Gardens, Public park Park Gardens, Public park Ashtead Park, Public park Wood Field, Public park Randall'S Park Lawn Cemetery, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 111 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 4 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 164 Listed Buildings Intersects 6 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty	High

	Surrey Hills, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole less than 1 % of LEATHERHEAD STW catchment is designated either AONB or National Park.	

1.179. LECHLADE STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Cotswold Water Park, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 1 no. SSSI and/or NNR sites Cotswold Water Park, Site of Special Scientific Interest As a whole less than 1% of LECHLADE STW catchment, is designated either at an International, National or Local level. Intersects 27 areas of Priority Habitat which makes up 2 % of the LECHLADE STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 9 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 1 religious grounds, 3 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 2 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of LECHLADE STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include:	Medium

	, Watercourses River Thames From Calcutt To Lechlade Including Hannington Wick, Flood Warning Areas River Thames And Its Small Tributaries From Calcutt To Lechlade, Flood Alert Areas Of the total area of the catchment, 13 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 98 % of LECHLADE STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 1 no. areas designated as Air Quality Management Area as follows: Thames Street, Lechlade, AQMA AQMAs constitute less than 1 % area of LECHLADE STW catchment. Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 5 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 1 religious grounds, 3 playing fields, 0 sports facility, 0 golf course, 0 public park and 1 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Cotswold Water Park, Site of Special Scientific Interest Within 200 meters, there are 6 sensitive receptors (School and education centres, hospitals or residential care homes) St Lawrence Church Of England Primary School, Schools and Education centres None, Allotments St Lawrence'S Church, Religious grounds None, Playing fields Riverside Park, Public park None, Cemeteries	High
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain	Medium

	through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 1 no. SSSI and/or NNR sites Cross Hands Quarry, Site of Special Scientific Interest As a whole 0% of LITTLE COMPTON STW catchment, is designated either at an International, National or Local level. Intersects 5 areas of Priority Habitat which makes up 1 % of the LITTLE COMPTON STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 3 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 1 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of LITTLE COMPTON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Evenlode From Moreton In Marsh To Cassington And Also The River Glyme At Wootton And Woodstock, Flood Alert Areas Of the total area of the catchment, 8 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a	Medium

	As a whole 96 % of LITTLE COMPTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of LITTLE COMPTON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 3 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 1 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 3 sensitive receptors (School and education centres, hospitals or residential care homes) None, Allotments St Denis'S Church, Religious grounds None, Cemeteries	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 11 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 12 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Cotswolds, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of LITTLE COMPTON STW catchment is designated either AONB or National Park.	High

Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 1 no. SSSI and/or NNR sites Buckland Warren, Site of Special Scientific Interest As a whole 0% of LITTLEWORTH STW catchment, is designated either at an International, National or Local level. Intersects 6 areas of Priority Habitat which makes up 4 % of the LITTLEWORTH STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level	Low

	of urbanisation within it. In respect of LITTLEWORTH STW catchment 0% is classified as urban.	
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of LITTLEWORTH STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of LITTLEWORTH STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 2 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 2 sensitive receptors (School and education centres, hospitals or residential care homes) None, Allotments Holy Ascension Church, Religious grounds	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 7 Listed Buildings	Low

	Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of LITTLEWORTH STW catchment is designated either AONB or National Park.	Low

These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 6 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 0 religious grounds, 4 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of LONGWATER STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Blackwater At Eversley And Bramshill, Flood Warning Areas River Blackwater At Camberley And Sandhurst, Flood Warning Areas River Blackwater And The Cove Brook, Flood Alert Areas Of the total area of the catchment, 16 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 87 % of LONGWATER STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of LONGWATER STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries	Medium

	Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 2 sensitive receptors (School and education centres, hospitals or residential care homes) Charles Kingsley'S Church Of England Primary School, Schools and Education centres None, Playing fields	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 2 Communities at Risk Areas (flooding) Contains 10 Flood Warning Areas Contains 13 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 18 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of LONGWATER STW catchment is designated either AONB or National Park.	Low

1.193. LOWER BASILDON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Hartslock Wood, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Hartslock, Site of Special Scientific Interest Holies Down, Site of Special Scientific Interest	Medium

	As a whole 0% of LOWER BASILDON STW catchment, is designated either at an International, National or Local level. Intersects 9 areas of Priority Habitat which makes up 28 % of the LOWER BASILDON STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar)	Medium

	Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of MANUDEN STW catchment, is designated either at an International, National or Local level. Intersects 6 areas of Priority Habitat which makes up 10 % of the MANUDEN STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 8 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 2 religious grounds, 2 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 2 areas where vulnerable population groups would be expected. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MANUDEN STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: River Stort, Watercourses River Stort At Clavering And Manuden, Flood Warning Areas River Stort And Stansted Brook Catchment, Flood Alert Areas Of the total area of the catchment, 11 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of MANUDEN STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences	Medium

	for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of MANUDEN STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 2 no. sensitive receptors. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 4 no areas utilised for recreation or which benefit the community. This includes 2 Allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 5 sensitive receptors (School and education centres, hospitals or residential care homes) Farnham Church Of England Primary School, Schools and Education centres Manuden Primary School, Schools and Education centres None, Allotments St Mary'S Church, Religious grounds None, Playing fields	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 67 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of MANUDEN STW catchment is designated either AONB or National Park.	Low

1.198. MAPLE LODGE STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and	High

	nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 1 Internationally designated sites (SPA, SAC, Ramsar) Chilterns Beechwoods, Special Area of Conservation (SAC) Intersects 7 Nationally designated sites (SSSI and NNR) Old Rectory Meadows, SSSI Water End Swallow Holes, SSSI Whippendell Wood, SSSI Bricket Wood Common, SSSI Intersects 23 Locally designated sites (LNR) Fisher'S Field, LNR Chorleywood Common, LNR Chorleywood House Estate, LNR Colney Heath, LNR Croxley Common Moor, LNR Stanmore Common, LNR Furzeffield Wood & Lower Halfpenny Bottom, LNR Howe Grove Wood, LNR Prestwick Road Meadows, LNR Oxhey Woods, LNR Oxleys Wood, LNR Within 10km there are 5 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Chilterns Beechwoods, Special Area of Conservation (SAC) Wormley-Hoddesdonpark Woods, Special Area of Conservation (SAC) Burnham Beeches, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 29 no. SSSI and/or NNR sites Old Rectory Meadows, SSSI Water End Swallow Holes, SSSI Whippendell Wood, SSSI Bricket Wood Common, SSSI Ashridge Commons And Woods, SSSI Croxley Common Moor, SSSI Mid Colne Valley, SSSI Roughdown Common, SSSI Hodgemoor Wood, SSSI Moor Mill Quarry, West, SSSI Castle Lime Works Quarry, SSSI Northaw Great Wood, SSSI Westwood Quarry, SSSI Froghall Brickworks, SSSI Old Park Wood, SSSI As a whole less than 1% of MAPLE LODGE STW catchment, is designated either at an International, National or Local level. Intersects 2938 areas of Priority Habitat which makes up 4 % of the MAPLE LODGE STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1262 areas currently utilised for recreation or which benefit the community. This includes 135 allotments, 136 religious grounds, 368 playing fields, 32 sports facility, 51 golf courses, 275 public parks and 41 cemeteries. Also within the catchment are 224 areas where vulnerable population groups would be expected. This includes 208 Schools and education centres, 16 hospitals, and 0 residential care homes.	High

	This is also reflected in the designation of 168 no. Noise Important Areas within the catchment.																																																																	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MAPLE LODGE STW catchment 73% is classified as urban.	High																																																																
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 24 areas of Source Protections Zones 1 and 2 Intersects 8 Drinking Water Safeguard Zones Intersects 115 statutory rivers / unnamed water bodies. Water environment features intersected include: <table><tr><td>Grand Union Canal, Watercourses</td><td>River Ver At St Albans, Flood Warning Areas</td></tr><tr><td>Mimmshall Brook, Watercourses</td><td>River Ver At Redbourn, Flood Warning Areas</td></tr><tr><td>Borehamwood Brook, Watercourses</td><td>River Gade At Kings Langley And Croxley, Flood Warning Areas</td></tr><tr><td>, Watercourses</td><td></td></tr><tr><td>River Bulbourne, Watercourses</td><td>River Colne At Willowbank, Flood Warning Areas</td></tr><tr><td>River Gade, Watercourses</td><td></td></tr><tr><td>Tykes Water, Watercourses</td><td>River Colne At Rickmansworth, Flood Warning Areas</td></tr><tr><td>River Colne, Watercourses</td><td></td></tr><tr><td>Ray Brook, Watercourses</td><td>Radlett And Borehamwood Brooks At Borehamwood, Flood Warning Areas</td></tr><tr><td>Potters Bar Brook, Watercourses</td><td>River Gade At Hemel Hempstead, Flood Warning Areas</td></tr><tr><td>River Chess, Watercourses</td><td></td></tr><tr><td>Oxhey Brook, Watercourses</td><td>River Bulbourne At Boxmoor, Flood Warning Areas</td></tr><tr><td>Hartsbourne, Watercourses</td><td></td></tr><tr><td>Hilfield Brook, Watercourses</td><td>Radlett Brook At Radlett, Flood Warning Areas</td></tr><tr><td>Kitwells Brook, Watercourses</td><td></td></tr><tr><td>The Brook, Watercourses</td><td>River Colne At Colney Heath, Flood Warning Areas</td></tr><tr><td>River Ver, Watercourses</td><td></td></tr><tr><td>Ellen Brook, Watercourses</td><td>River Colne At London Colney, Flood Warning Areas</td></tr><tr><td>Taylors Cut, Watercourses</td><td></td></tr><tr><td>Town Ditch, Watercourses</td><td>Upper River Colne And Radlett Brook, Flood Alert Areas</td></tr><tr><td>Butterwick Brook, Watercourses</td><td></td></tr><tr><td>River Misbourne, Watercourses</td><td>Mimmshall Brook, Flood Alert Areas</td></tr><tr><td>Catharine Bourne, Watercourses</td><td>Lower River Colne And Frays River, Flood Alert Areas</td></tr><tr><td>Mimmshall Brook At Warrengate Road, Flood Warning Areas</td><td></td></tr><tr><td>River Chess At Chenies, Flood Warning Areas</td><td>River Ver In Hertfordshire, Flood Alert Areas</td></tr><tr><td>River Misbourne At The Chalfonts, Flood Warning Areas</td><td>Middle River Colne, Flood Alert Areas</td></tr><tr><td></td><td>Lower Lee Tributaries, Flood Alert Areas</td></tr><tr><td>River Misbourne At Amersham, Flood Warning Areas</td><td>River Chess In The Chilterns And Three Rivers Districts, Flood Alert Areas</td></tr><tr><td>River Chess At Loudwater, Flood Warning Areas</td><td>Rivers Gade And Bulbourne, Flood Alert Areas</td></tr><tr><td></td><td>River Misbourne, Flood Alert Areas</td></tr><tr><td>River Gade At Frogmore End, Flood Warning Areas</td><td></td></tr><tr><td>River Colne At Watford, Flood Warning Areas</td><td></td></tr></table> Of the total area of the catchment, 3 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk. Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 7 Communities at Risk Areas (flooding) Contains 20 Flood Warning Areas Contains 50 Flood Alert Areas			High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 1865 Listed Buildings Intersects 34 areas designated as Scheduled Monuments Intersects 18 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites			Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Chilterns, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 7 % of MAPLE LODGE STW catchment is designated either AONB or National Park.			High

1.199. MARKYATE STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Chilterns Beechwoods, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Kensworth Chalk Pit, Site of Special Scientific Interest Dunstable And Whipsnade Downs, Site of Special Scientific Interest As a whole 0% of MARKYATE STW catchment, is designated either at an International, National or Local level. Intersects 36 areas of Priority Habitat which makes up 5 % of the MARKYATE STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 16 areas currently utilised for recreation or which benefit the community. This includes 3 allotments, 3 religious grounds, 4 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 3 cemeteries. Also within the catchment are 2 areas where vulnerable population groups would be expected. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 8 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MARKYATE STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 2 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Ver At Markyate, Flood Warning Areas Groundwater Flooding In Flamstead, Flood Alert Areas River Ver In Hertfordshire, Flood Alert Areas Of the total area of the catchment, 4 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium

Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of MARKYATE STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of MARKYATE STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 2 no. sensitive receptors. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 13 no areas utilised for recreation or which benefit the community. This includes 3 Allotments, 3 religious grounds, 4 playing fields, 0 sports facility, 0 golf course, 0 public park and 3 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 9 sensitive receptors (School and education centres, hospitals or residential care homes) Flamstead Village School, Schools and Education centres Kensworth (Voluntary Controlled) Lower School, Schools and Education centres None, Allotments St John'S Church, Religious grounds None, Religious grounds St Leonard'S Church, Religious grounds None, Playing fields Cavendish Road Play Area, Playing fields None, Cemeteries	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. 	Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Mole Gap To Reigate Escarpment, Special Area of Conservation (SAC) Within 2km there are 4 no. SSSI and/or NNR sites Quarry Hangers, Site of Special Scientific Interest Chipstead Downs, Site of Special Scientific Interest Mole Gap To Reigate Escarpment, Site of Special Scientific Interest Farthing Downs And Happy Valley, Site of Special Scientific Interest As a whole 0% of MERSTHAM STW catchment, is designated either at an International, National or Local level. Intersects 96 areas of Priority Habitat which makes up 7 % of the MERSTHAM STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 20 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 5 religious grounds, 6 playing fields, 0 sports facility, 1 golf courses, 3 public parks and 1 cemeteries. Also within the catchment are 3 areas where vulnerable population groups would be expected. This includes 3 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 7 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MERSTHAM STW catchment 72% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Redhill Brook At Redhill And Salfords Stream At Salfords, Flood Alert Areas Of the total area of the catchment, 12 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 20 % of MERSTHAM STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences	Medium

	for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 2 no. areas designated as Air Quality Management Area as follows: Aqma No.1 (M25), AQMA Aqma No.10, AQMA AQMA's constitute 2 % area of MERSTHAM STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 2 no. sensitive receptors. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 12 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 5 religious grounds, 2 playing fields, 0 sports facility, 0 golf course, 3 public park and 1 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 14 sensitive receptors (School and education centres, hospitals or residential care homes) Merstham Primary School, Schools and Education centres Furze Field Community Primary School, Schools and Education centres None, Allotments St Katharine'S Church, Religious grounds All Saints' Parish Church, Religious grounds Church Of The Epiphany, Religious grounds Merstham Baptist Church, Religious grounds St Teresa'S Roman Catholic Church, Religious grounds None, Playing fields None, Golf course Mercers Park, Public park Crossways Rest Garden, Public park None, Public park None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 10 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 47 Listed Buildings Intersects 5 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Surrey Hills, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 10 % of MERSTHAM STW catchment is designated either AONB or National Park.	High

1.203. MIDDLE BARTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Middle Barton Fen, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 2 no. SSSI and/or NNR sites Middle Barton Fen, Site of Special Scientific Interest Horsehay Quarries, Site of Special Scientific Interest As a whole less than 1% of MIDDLE BARTON STW catchment, is designated either at an International, National or Local level. Intersects 7 areas of Priority Habitat which makes up 5 % of the MIDDLE BARTON STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 6 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 2 religious grounds, 1 playing fields, 1 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. This is also reflected in the designation of 12 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level	High

	of urbanisation within it. In respect of MILL GREEN STW catchment 72% is classified as urban.	
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 11 statutory rivers / unnamed water bodies. Water environment features intersected include: River Lea Or Lee, Watercourses , Watercourses Essendon Brook, Watercourses River Lee At Harpenden, Flood Warning Areas River Lee From Lemsford To Hertford, Flood Warning Areas River Lee At Luton, Harpenden And Wheathampstead, Flood Alert Areas River Lee At Hertford, Flood Alert Areas Of the total area of the catchment, 2 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 86 % of MILL GREEN STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of MILL GREEN STW catchment. Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 10 no. sensitive receptors. This includes 9 Schools and education centres, 1 hospitals, and 0 residential care homes Intersects 49 no areas utilised for recreation or which benefit the community. This includes 3 Allotments, 7 religious grounds, 17 playing fields, 0 sports facility, 9 golf course, 12 public park and 1 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Sherrardspark Wood, Site of Special Scientific Interest Within 200 meters, there are 36 sensitive receptors (School and education centres, hospitals or residential care homes) Green Lanes Primary School, Schools and Education centres The Ryde School, Schools and Education centres Birchwood Avenue Primary School, Schools and Education centres Countess Anne School, Schools and Education centres St John'S (Voluntary Aided) Church Of England Primary School, Schools and Education centres Essendon Church Of England (Voluntary Controlled) Primary School, Schools and Education centres Creswick Primary And Nursery School, Schools and Education centres Our Lady Catholic Primary School, Schools and Education centres	Medium

	Applecroft Primary School, Schools and Education centres Hatfield Community Free School, Schools and Education centres St Philip Howard Catholic Primary School, Schools and Education centres One Hatfield Hospital, Hospitals None, Allotments Green Lanes Allotments, Allotments St Lukes Church, Religious grounds Roman Catholic Church Of Marychurch, Religious grounds St John'S Church, Religious grounds Christ Church, Religious grounds St Mary'S Church, Religious grounds St Etheldreda'S Church, Religious grounds Church Of St Michael And All Angels, Religious grounds Gracemead Church, Religious grounds None, Religious grounds The Link Skate Park, Playing fields None, Playing fields Bloody Hollow Childrens Play Area, Playing fields None, Golf course Mill Green Golf Club, Golf course Brocket Park, Golf course Coronation Gardens, Public park None, Public park Old Palace Garden, Public park Sundial Garden, Public park Stanborough Park, Public park Ellenbrook Fields, Public park None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 4 Flood Warning Areas Contains 19 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 123 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 2 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of MILL GREEN STW catchment is designated either AONB or National Park.	Low

1.208. MILTON-UNDER-WYCHWOOD STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 3 no. SSSI and/or NNR sites Bould Wood, Site of Special Scientific Interest Wychwood, Site of Special Scientific Interest Wychwood, National Nature Reserve As a whole 0% of MILTON-UNDER-WYCHWOOD STW catchment, is designated either at an International, National or Local level. Intersects 33 areas of Priority Habitat which makes up 2 % of the MILTON-UNDER-WYCHWOOD STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 20 areas currently utilised for recreation or which benefit the community. This includes 3 allotments, 8 religious grounds, 4 playing fields, 1 sports facility, 1 golf courses, 1 public parks and 1 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. 	differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 16 areas currently utilised for recreation or which benefit the community. This includes 4 allotments, 2 religious grounds, 4 playing fields, 1 sports facility, 0 golf courses, 1 public parks and 2 cemeteries. Also within the catchment are 2 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 1 hospitals, and 0 residential care homes. This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MORETON-IN-MARSH STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Evenlode At Moreton In Marsh, Flood Warning Areas River Evenlode From Moreton In Marsh To Cassington And Also The River Glyme At Wootton And Woodstock, Flood Alert Areas Of the total area of the catchment, 10 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a As a whole 54 % of MORETON-IN-MARSH STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of MORETON-IN-MARSH STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 2 no. sensitive receptors. This includes 1 Schools and education centres, 1 hospitals, and 0 residential care homes Intersects 13 no areas utilised for recreation or which benefit the community. This includes 3 Allotments, 2 religious grounds, 4 playing fields, 1 sports facility, 0 golf course, 1 public park and 2 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Within 200 meters, there are 9 sensitive receptors (School and education centres, hospitals or residential care homes) St David'S C Of E Primary School, Schools and Education centres North Cotswold Hospital, Hospitals None, Allotments St Lawrence'S Church, Religious grounds St David'S Church, Religious grounds None, Playing fields None, Sports facility Queen Victoria'S Garden, Public park None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 2 Flood Warning Areas Contains 11 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 134 Listed Buildings Intersects 2 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Cotswolds, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 37 % of MORETON-IN-MARSH STW catchment is designated either AONB or National Park.	High

1.213. MORTIMER STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites	Medium

	Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 1 no. SSSI and/or NNR sites Stanford End Mill And River Loddon, Site of Special Scientific Interest As a whole 0% of MORTIMER STW catchment, is designated either at an International, National or Local level. Intersects 34 areas of Priority Habitat which makes up 4 % of the MORTIMER STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 11 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 3 religious grounds, 2 playing fields, 0 sports facility, 4 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 2 areas where vulnerable population groups would be expected. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MORTIMER STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: Foudry Brook, Watercourses Foudry Brook From Stratfield Mortimer To Green Park, Flood Warning Areas River Enborne And Foudry Brook, Flood Alert Areas Of the total area of the catchment, 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 91 % of MORTIMER STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. 1.217. NEW MILL STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 1 Internationally designated sites (SPA, SAC, Ramsar) Thames Basin Heaths, Special Protection Area (SPA) Intersects 1 Nationally designated sites (SSSI and NNR) Bramshill, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 1 no. SSSI and/or NNR sites Bramshill, Site of Special Scientific Interest As a whole less than 1% of NEW MILL STW catchment, is designated either at an International, National or Local level. Intersects 40 areas of Priority Habitat which makes up 8 % of the NEW MILL STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following;	Medium

	1 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of NEW MILL STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 2 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Blackwater River, Watercourses River Blackwater At Eversley And Bramshill, Flood Warning Areas River Blackwater And The Cove Brook, Flood Alert Areas Of the total area of the catchment, 9 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 13 % of NEW MILL STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of NEW MILL STW catchment. Intersects 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 1 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Thames Basin Heaths, Special Protection Area (SPA) Bramshill, Site of Special Scientific Interest Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) , Allotments	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier	Medium

	summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 12 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of NEW MILL STW catchment is designated either AONB or National Park. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of NUNEHAM COURTENAY STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter	Medium

	regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of NUNEHAM COURTENAY STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 3 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 4 sensitive receptors (School and education centres, hospitals or residential care homes) Marsh Baldon Church Of England Primary School, Schools and Education centres None, Allotments St Peter'S Church, Religious grounds Marsh Baldon Green, Public park	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 56 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of NUNEHAM COURTENAY STW catchment is designated either AONB or National Park.	Low

1.222. OXFORD STW Catchment

SEA Topic	Commentary	Sensitivity assigned

	material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of OXFORD STW catchment 83% is classified as urban.																																															
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 33 statutory rivers / unnamed water bodies. Water environment features intersected include: <table><tr><td>Oxford Canal, Watercourses</td><td>Area Of Kidlington Benefiting From The Flood</td></tr><tr><td>, Watercourses</td><td>Alleviation Scheme, Flood Warning</td></tr><tr><td>River Thames, Watercourses</td><td>Areas River</td></tr><tr><td>Wytham Stream, Watercourses</td><td>Thames And Tributaries In</td></tr><tr><td>Littlemore Brook, Watercourses</td><td>The Binsey, Osney And Osney Island Areas In</td></tr><tr><td>Northfield Brook, Watercourses</td><td>Oxford, Flood Warning Areas</td></tr><tr><td>River Cherwell, Watercourses</td><td>River Thames Between Newbridge And Kings</td></tr><tr><td>Bayswater Brook, Watercourses</td><td>Lock Above Oxford, Flood Warning Areas</td></tr><tr><td>Boundary Brook, Watercourses</td><td>River Thames And Tributaries At Sandford And</td></tr><tr><td>Eastwyke Ditch, Watercourses</td><td>Radley Near Oxford, Flood Warning Areas</td></tr><tr><td>Kingsbridge Brook, Watercourses</td><td>River Cherwell From Lower Heyford Down To</td></tr><tr><td>River Thames And</td><td>Cherwell Bridge, Flood Warning Areas</td></tr><tr><td>Tributaries At Kennington, Flood Warning</td><td>River Thames And Tributaries From Buscot Wick</td></tr><tr><td>Areas</td><td>Down To Kings Lock, Flood Alert Areas</td></tr><tr><td>River Thames And Tributaries At New</td><td>River Cherwell From Lower Heyford Down To</td></tr><tr><td>Botley, New And</td><td>And Including Oxford, Flood Alert Areas</td></tr><tr><td>North Hinksey And Grandpont In Oxford,</td><td>River Thames And Tributaries In The Oxford Area,</td></tr><tr><td>Flood Warning Areas</td><td>Flood Alert Areas</td></tr><tr><td>River Cherwell For The Oxford Area, Flood</td><td></td></tr><tr><td>Warning Areas</td><td></td></tr><tr><td>River Thames And Tributaries At</td><td></td></tr><tr><td>Wolvercote In Oxford, Flood Warning</td><td></td></tr><tr><td>Areas</td><td></td></tr></table> Of the total area of the catchment, 9 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk. Low

1.223. PANGBOURNE STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR)	Medium

	Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Hartslock Wood, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Sulham And Tidmarsh Woods And Meadows, Site of Special Scientific Interest Hartslock, Site of Special Scientific Interest As a whole 0% of PANGBOURNE STW catchment, is designated either at an International, National or Local level. Intersects 90 areas of Priority Habitat which makes up 4 % of the PANGBOURNE STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 40 areas currently utilised for recreation or which benefit the community. This includes 3 allotments, 7 religious grounds, 16 playing fields, 2 sports facility, 0 golf courses, 3 public parks and 2 cemeteries. Also within the catchment are 7 areas where vulnerable population groups would be expected. This includes 7 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 8 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of PANGBOURNE STW catchment 41% is classified as urban.	Medium
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 7 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Pang, Watercourses River Thames, Watercourses Sulham Brook For Sulham, Flood Warning Areas Briars Close, Pangbourne Benefiting From The Flood Alleviation Scheme, Flood Warning Areas River Thames At Pangbourne And Whitchurch, Flood Warning Areas River Pang At Pangbourne, Flood Warning Areas Sulham Brook At Pangbourne, Flood Warning Areas River Thames At Purley Village, Flood Warning Areas River Pang From East Ilsley To Pangbourne And Sulham Brook, Flood Alert Areas River Thames From Pangbourne To Purley, Flood Alert Areas Of the total area of the catchment, 11 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades:	Medium

	Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 98 % of PANGBOURNE STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.

Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Cherwell From Charwelton To Just Above Upper Heyford, Flood Alert Areas Of the total area of the catchment, 2 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a As a whole 40 % of PRIORS MARSTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of PRIORS MARSTON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 2 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 2 sensitive receptors (School and education centres, hospitals or residential care homes) St Leonards Church, Religious grounds , Playing fields	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding)	Medium

	Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 36 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of PRIORS MARSTON STW catchment is designated either AONB or National Park.	Low

1.226. PURTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites North Meadow & Clattinger Farm, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Restrop Farm And Brockhurst Wood, Site of Special Scientific Interest As a whole 0% of PURTON STW catchment, is designated either at an International, National or Local level. Intersects 3 areas of Priority Habitat which makes up less than 1 % of the PURTON STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following;	Medium

	9 areas currently utilised for recreation or which benefit the community. This includes 3 allotments, 1 religious grounds, 2 playing fields, 1 sports facility, 0 golf courses, 1 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of PURTON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Key From The Bentham Area To Cricklade Including Purton Stoke, Flood Warning Areas Tributaries On The Upper River Thames Above Cricklade, Flood Alert Areas Of the total area of the catchment, 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 92 % of PURTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 3 Communities at Risk Areas (flooding) Contains 68 Flood Warning Areas Contains 58 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 639 Listed Buildings Intersects 6 areas designated as Scheduled Monuments Intersects 6 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst	High

	integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 2 areas designated as Area of Outstanding Natural Beauty Chilterns, Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 4 % of READING STW catchment is designated either AONB or National Park.	

1.230. RIPLEY STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 2 Nationally designated sites (SSSI and NNR) Papercourt, Site of Special Scientific Interest Sheepheas, Site of Special Scientific Interest Intersects 1 Locally designated sites (LNR) Sheepheas, Local Nature Reserve Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Mole Gap To Reigate Escarpment, Special Area of Conservation (SAC) Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 6 no. SSSI and/or NNR sites Papercourt, Site of Special Scientific Interest Sheepheas, Site of Special Scientific Interest Ockham And Wisley Commons, Site of Special Scientific Interest Bookham Commons, Site of Special Scientific Interest Ranmore Common, Site of Special Scientific Interest Upper Common Pits, Site of Special Scientific Interest As a whole less than 1% of RIPLEY STW catchment, is designated either at an International, National or Local level. Intersects 278 areas of Priority Habitat which makes up 4 % of the RIPLEY STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 51 areas currently utilised for recreation or which benefit the community. This includes 5 allotments, 11 religious grounds, 10 playing fields, 2 sports facility, 4 golf courses, 7 public parks and 5 cemeteries. Also within the catchment are 7 areas where vulnerable population groups would be expected. This includes 7 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 3 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which	Low

	material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of RIPLEY STW catchment 12% is classified as urban.	
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 2 areas of Source Protections Zones 1 and 2 Intersects 4 Drinking Water Safeguard Zones Intersects 15 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Wey At Old Woking, Flood Warning Areas East Clandon Stream At Send, Flood Warning Areas Lower River Wey, Flood Alert Areas Of the total area of the catchment, 6 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 81 % of RIPLEY STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of RIPLEY STW catchment. Intersects 4 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 7 no. sensitive receptors. This includes 7 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 32 no areas utilised for recreation or which benefit the community. This includes 3 Allotments, 7 religious grounds, 7 playing fields, 1 sports facility, 3 golf course, 6 public park and 5 cemeteries Within 200 meters, there are 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Papercourt, Site of Special Scientific Interest Sheepleas, Site of Special Scientific Interest Within 200 meters, there are 27 sensitive receptors (School and education centres, hospitals or residential care homes) Clandon C Of E Infant School, Schools and Education centres Ripley C Of E Primary School, Schools and Education centres The Raleigh School, Schools and Education centres Send C Of E Primary School, Schools and Education centres Glenesk School, Schools and Education centres St Lawrence County Primary School, Schools and Education centres None, Allotments St Mary'S Daughter Church, Religious grounds St Martin'S Church, Religious grounds St Thomas Of Canterbury'S Church, Religious grounds St Mary'S Church, Religious grounds	Medium

	St Peter And St Paul'S Church, Religious grounds Church Of Our Lady Of Sorrows, Religious grounds St Laurence'S Church, Religious grounds All Saints Church, Religious grounds All Saints' Church, Religious grounds None, Playing fields None, Sports facility Ripley Bowling Club, Sports facility None, Golf course Effingham House, Golf course Clandon Regis Golf Club, Golf course Heath Field, Public park Brick Field, Public park Ripley Green, Public park None, Public park None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 4 Flood Warning Areas Contains 9 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 184 Listed Buildings Intersects 1 areas designated as Scheduled Monuments Intersects 2 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Surrey Hills, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole less than 1 % of RIPLEY STW catchment is designated either AONB or National Park.	High

1.231. ROWSHAM STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of RYE COMMON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows:	Low

	AQMAs constitute 0 % area of RYE COMMON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of RYE COMMON STW catchment is designated either AONB or National Park.	Low

1.235. RYE MEADS STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 2 Internationally designated sites (SPA, SAC, Ramsar) Lee Valley, RAMSAR site Lee Valley, (SPA) Intersects 7 Nationally designated sites (SSSI and NNR) Amwell Quarry, SSSI Tewinbury, SSSI Sherrardspark Wood, SSSI Harlow Woods, SSSI Hertford Heath, SSSI	High

	Rye Meads, SSSI Hunsdon Mead, SSSI Intersects 10 Locally designated sites (LNR) Parndon Woods & Common, LNR Top Field And Cozens Grove, LNR Singlers Marsh, LNR The Commons, LNR Sherrardspark Wood, LNR Within 10km there are 4 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Wormley-Hoddesdonpark Woods, (SAC) Within 2km there are 20 no. SSSI and/or NNR sites Amwell Quarry, SSSI Sherrardspark Wood, SSSI Rye Meads, SSSI Hunsdon Mead, SSSI Tewinbury, SSSI Harlow Woods, SSSI Hertford Heath, SSSI Knebworth Woods, SSSI Turnford & Cheshunt Pits, SSSI Downfield Pit, Westmill, SSSI As a whole less than 1% of RYE MEADS STW catchment, is designated either at an International, National or Local level. Intersects 1948 areas of Priority Habitat which makes up 6 % of the RYE MEADS STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 853 areas currently utilised for recreation or which benefit the community. This includes 115 allotments, 95 religious grounds, 275 playing fields, 25 sports facility, 28 golf courses, 159 public parks and 19 cemeteries. Also within the catchment are 137 areas where vulnerable population groups would be expected. This includes 130 Schools and education centres, 7 hospitals, and 0 residential care homes. This is also reflected in the designation of 78 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of RYE MEADS STW catchment 72% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 20 areas of Source Protections Zones 1 and 2 Intersects 5 Drinking Water Safeguard Zones Intersects 94 statutory rivers / unnamed water bodies. Water environment features intersected include: River Rib, Watercourses River Lea Or Lee, Watercourses Parndon Brook, Watercourses , Watercourses Todd Brook, Watercourses Canons Brook, Watercourses River Mimram At Welwyn, Flood Warning Areas River Lee From Lemsford To Hertford, Flood Warning Areas River Lee At Hertford And Ware, Flood Warning Areas	High

	Dane End Tributary, Watercourses River Beane, Watercourses River Stort, Watercourses New River, Watercourses Golden Brook, Watercourses Fiddlers' Brook, Watercourses The Bourne, Watercourses Spital Brook, Watercourses River Ash, Watercourses Stanstead Mill Stream, Watercourses Woollens Brook, Watercourses Brickendon Brook, Watercourses Toll House Stream, Watercourses Nazeing Brook, Watercourses Hunsdon Brook, Watercourses Stapleford Marsh Ditch, Watercourses Stevenage Brook, Watercourses River Mimram, Watercourses Pincey Brook, Watercourses Shonks Brook, Watercourses Manifold Ditch, Watercourses River Stort At Sawbridgeworth, Flood Warning Areas Lower River Lee At Hoddesdon And Cheshunt, Flood Warning Areas Nazeing Brook At Lower Nazeing, Flood Warning Areas Of the total area of the catchment, 8 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	River Rib At Wadesmill To Hertford, Flood Warning Areas River Mimram From Tewin To Hertford, Flood Warning Areas River Beane At Watton-At-Stone To Waterford, Flood Warning Areas River Beane At Hertford, Flood Warning Areas River Stort At Harlow, Flood Warning Areas River Beane At Walkern, Flood Warning Areas Stevenage Brook At Stevenage, Flood Warning Areas Dane End Tributary At Dane End, Flood Warning Areas River Stort And Stansted Brook Catchment, Flood Alert Areas River Ivel In Hertfordshire And Central Bedfordshire, Flood Alert Areas River Beane Catchment, Flood Alert Areas River Lee At Hertford, Flood Alert Areas Lower Lee Tributaries, Flood Alert Areas Rivers Rib And Quin, Flood Alert Areas Canons Brook From Harlow To Parndon Mead, Flood Alert Areas River Mimram In Hertfordshire, Flood Alert Areas Lower River Lee From Hoddesdon To Canning Town, Flood Alert Areas	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 94 % of RYE MEADS STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.		Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 3 no. areas designated as Air Quality Management Area as follows: Hertford Aqma, AQMA Aqma Sawbridgeworth, AQMA Aqma 7 High Road In Wormley (A1170), AQMA AQMA's constitute less than 1 % area of RYE MEADS STW catchment. Intersects 20 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 136 no. sensitive receptors. This includes 129 Schools and education centres, 7 hospitals, and 0 residential care homes Intersects 651 no areas utilised for recreation or which benefit the community. This includes 107 Allotments, 87 religious grounds, 251 playing fields, 22 sports facility, 13 golf course, 157 public park and 14 cemeteries Within 200 meters, there are 12 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Lee Valley, RAMSAR site Lee Valley, (SPA) Amwell Quarry, SSSI Sherrardspark Wood, SSSI Rye Meads, SSSI Hunsdon Mead, SSSI	Tewinbury, SSSI Harlow Woods, SSSI Hertford Heath, SSSI Knebworth Woods, SSSI Turnford & Cheshunt Pits, SSSI Downfield Pit, Westmill, SSSI	High

Within 200 meters, there are 279 sensitive receptors (School and education centres, hospitals or residential care homes)

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 6 Flood Warning Areas Contains 13 Flood Alert Areas	Medium																																										
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from	Medium																																										

	infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 39 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 3 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of SANDHURST STW catchment is designated either AONB or National Park.	Low

1.238. SELBORNE STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 1 Internationally designated sites (SPA, SAC, Ramsar) East Hampshire Hangers, Special Area of Conservation (SAC) Intersects 1 Nationally designated sites (SSSI and NNR) Selborne Common, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 4 no. SPAs, SACs and/or Ramsar sites East Hampshire Hangers, Special Area of Conservation (SAC) Shortheath Common, Special Area of Conservation (SAC) Woolmer Forest, Special Area of Conservation (SAC) Wealden Heaths Phase II, Special Protection Area (SPA) Within 2km there are 6 no. SSSI and/or NNR sites Selborne Common, Site of Special Scientific Interest Coombe Wood And The Lythe, Site of Special Scientific Interest Noar Hill, Site of Special Scientific Interest Wick Wood And Worldham Hangers, Site of Special Scientific Interest Upper Greensand Hangers : Empshott To Hawkley, Site of Special Scientific Interest Wealden Edge Hangers, Site of Special Scientific Interest As a whole less than 1% of SELBORNE STW catchment, is designated either at an International, National or Local level. Intersects 43 areas of Priority Habitat which makes up 15 % of the SELBORNE STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an	Medium

	important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 6 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of SELBORNE STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 2 statutory rivers / unnamed water bodies. Water environment features intersected include: The Well Head Stream, Watercourses Oakhanger Stream, Watercourses Upper River Wey, Flood Alert Areas Of the total area of the catchment, 2 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 99 % of SELBORNE STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of SELBORNE STW catchment. Intersects 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 3 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 3 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) East Hampshire Hangers, Special Area of Conservation (SAC) Selborne Common, Site of Special Scientific Interest Coombe Wood And The Lythe, Site of Special Scientific Interest Within 200 meters, there are 5 sensitive receptors (School and education centres, hospitals or residential care homes)	Medium

	Selborne Church Of England Primary School, Schools and Education centres None, Allotments St Mary'S Church, Religious grounds None, Playing fields Church Meadow, Public park	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. 	Within 10km there are 4 no. SPAs, SACs and/or Ramsar sites Thursley & Ockley Bogs, RAMSAR site Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Thursley, Hankley & Frensham Commons, Special Protection Area (SPA) Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 3 no. SSSI and/or NNR sites Blackheath, Site of Special Scientific Interest Wey Valley Meadows, Site of Special Scientific Interest Colyers Hanger, Site of Special Scientific Interest As a whole less than 1% of SHAMLEY GREEN STW catchment, is designated either at an International, National or Local level. Intersects 209 areas of Priority Habitat which makes up 14 % of the SHAMLEY GREEN STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 52 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 6 religious grounds, 4 playing fields, 2 sports facility, 1 golf courses, 29 public parks and 6 cemeteries. Also within the catchment are 2 areas where vulnerable population groups would be expected. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 5 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of SHAMLEY GREEN STW catchment 55% is classified as urban.	Medium
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 15 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Littlebrook, Watercourses Cranleigh Waters At Bramley, Flood Warning Areas Cranleigh Waters Near Cranleigh And Shamley Green, Flood Warning Areas Cranleigh Waters, Flood Alert Areas Of the total area of the catchment, 6 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 24 % of SHAMLEY GREEN STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter	Medium

	regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of SHAMLEY GREEN STW catchment. Intersects 4 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 2 no. sensitive receptors. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 21 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 5 religious grounds, 4 playing fields, 2 sports facility, 1 golf course, 7 public park and 1 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Blackheath, Site of Special Scientific Interest Within 200 meters, there are 13 sensitive receptors (School and education centres, hospitals or residential care homes) Wonersh And Shamley Green C Of E Primary School, Schools and Education centres Bramley Church Of England (Aided) Infant School, Schools and Education centres None, Allotments None, Religious grounds Christ Church, Religious grounds St John The Baptist'S Church, Religious grounds Holy Trinity Church, Religious grounds St Augustine'S Abbey, Religious grounds None, Playing fields None, Sports facility None, Golf course Lordshill Common, Public park None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 2 Flood Warning Areas Contains 7 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 95 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Surrey Hills, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 30 % of SHAMLEY GREEN STW catchment is designated either AONB or National Park.	High

A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites River Lambourn, Special Area of Conservation (SAC) Hackpen Hill, Special Area of Conservation (SAC) Within 2km there are 4 no. SSSI and/or NNR sites Tuckmill Meadows, Site of Special Scientific Interest Fernham Meadows, Site of Special Scientific Interest The Coombs, Hinton Parva, Site of Special Scientific Interest Wicklesham And Coxwell Pits, Site of Special Scientific Interest As a whole 0% of SHRIVENHAM STW catchment, is designated either at an International, National or Local level. Intersects 69 areas of Priority Habitat which makes up 6 % of the SHRIVENHAM STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 51 areas currently utilised for recreation or which benefit the community. This includes 7 allotments, 9 religious grounds, 14 playing fields, 1 sports facility, 11 golf courses, 2 public parks and 2 cemeteries. Also within the catchment are 5 areas where vulnerable population groups would be expected. This includes 5 Schools and education centres, 0 hospitals, and 0 residential care homes.	Medium

	This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of SHRIVENHAM STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 6 statutory rivers / unnamed water bodies. Water environment features intersected include: Bower Brook, Watercourses , Watercourses Tuckmill Brook, Watercourses River Cole And Dorcan Brook, Flood Alert Areas Of the total area of the catchment, 3 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 95 % of SHRIVENHAM STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of SHRIVENHAM STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 5 no. sensitive receptors. This includes 5 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 40 no areas utilised for recreation or which benefit the community. This includes 5 Allotments, 8 religious grounds, 12 playing fields, 1 sports facility, 11 golf course, 2 public park and 1 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Tuckmill Meadows, Site of Special Scientific Interest Within 200 meters, there are 19 sensitive receptors (School and education centres, hospitals or residential care homes) Shrivenham Church Of England (Controlled) St Mary'S Church School, St John'S Church Bishopstone Church Of England Primary St Andrew'S Church School St Thomas Church Watchfield Primary School None, Playing fields Ashbury With Compton Beauchamp None, Sports facility Church Of England (Aided) Primary School None, Golf course Longcot And Fernham Church Of England Shrivenham Park Golf Club Primary School None, Public park	Medium

	None, Allotments None, Religious grounds St Patrick'S Roman Catholic Church	The Green, Public park None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 8 Flood Alert Areas		Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 121 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites		Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 3 % of SHRIVENHAM STW catchment is designated either AONB or National Park.		High

1.248. SHUTFORD STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of SHUTFORD STW catchment, is designated either at an International, National or Local level. Intersects 21 areas of Priority Habitat which makes up 2 % of the SHUTFORD STW catchment area.	Medium

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 2 Communities at Risk Areas (flooding) Contains 68 Flood Warning Areas Contains 36 Flood Alert Areas			High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 384 Listed Buildings Intersects 3 areas designated as Scheduled Monuments Intersects 10 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites			Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of SLOUGH STW catchment is designated either AONB or National Park.			Low

1.251. SONNING COMMON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs,	Medium

	Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Hartslock Wood, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Bear, Oveys & Great Bottom Woods, Site of Special Scientific Interest As a whole 0% of SONNING COMMON STW catchment, is designated either at an International, National or Local level. Intersects 26 areas of Priority Habitat which makes up 4 % of the SONNING COMMON STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 12 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 4 religious grounds, 4 playing fields, 1 sports facility, 0 golf courses, 1 public parks and 0 cemeteries. Also within the catchment are 2 areas where vulnerable population groups would be expected. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of SONNING COMMON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 99 % of SONNING COMMON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium

Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of SONNING COMMON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 8 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 3 religious grounds, 3 playing fields, 1 sports facility, 0 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 6 sensitive receptors (School and education centres, hospitals or residential care homes) Sonning Common Primary School, Schools and Education centres None, Religious grounds St Michael'S Roman Catholic Church, Religious grounds None, Playing fields None, Sports facility None, Public park	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 5 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Chilterns, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 16 % of SONNING COMMON STW catchment is designated either AONB or National Park.	High

The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of STANDLAKE STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 7 no areas utilised for recreation or which benefit the community. This includes 2 Allotments, 1 religious grounds, 4 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 4 sensitive receptors (School and education centres, hospitals or residential care homes) Standlake Church Of England Primary School, Schools and Education centres None, Allotments	Medium

	St Giles' Church, Religious grounds None, Playing fields	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 12 Flood Warning Areas Contains 16 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 51 Listed Buildings Intersects 5 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of STANDLAKE STW catchment is designated either AONB or National Park.	Low

1.256. STANDON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Lee Valley, Special Protection Area (SPA) Within 2km there are 1 no. SSSI and/or NNR sites Plashes Wood, Site of Special Scientific Interest As a whole 0% of STANDON STW catchment, is designated either at an International, National or Local level. Intersects 21 areas of Priority Habitat which makes up 3 % of the STANDON STW catchment area.	Medium

Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 10 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 3 religious grounds, 2 playing fields, 1 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 3 areas where vulnerable population groups would be expected. This includes 3 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 3 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of STANDON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 8 statutory rivers / unnamed water bodies. Water environment features intersected include: River Rib, Watercourses , Watercourses Puckeridge Tributary, Watercourses River Rib At Buntingford To Barwick, Flood Warning Areas Rivers Rib And Quin, Flood Alert Areas Of the total area of the catchment, 17 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of STANDON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of STANDON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 3 no. sensitive receptors. This includes 3 Schools and education centres, 0 hospitals, and 0 residential care homes	Medium

	Intersects 5 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 1 religious grounds, 2 playing fields, 1 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 7 sensitive receptors (School and education centres, hospitals or residential care homes) St Thomas Of Canterbury Roman Catholic Primary School, Schools and Education centres Ralph Sadleir Middle School, Schools and Education centres Roger De Clare Church Of England First School And Nursery, Schools and Education centres None, Allotments St Mary'S Church, Religious grounds None, Playing fields None, Sports facility	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 93 Listed Buildings Intersects 6 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of STANDON STW catchment is designated either AONB or National Park. Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 96 % of STANTON HARCOURT STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of STANTON HARCOURT STW catchment. Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 5 no areas utilised for recreation or which benefit the community. This includes 2 Allotments, 2 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries	Medium

	Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Stanton Harcourt, Site of Special Scientific Interest Within 200 meters, there are 6 sensitive receptors (School and education centres, hospitals or residential care homes) Stanton Harcourt Church Of England Primary School, Schools and Education centres None, Allotments Sutton Methodist Church, Religious grounds St Michael'S Church, Religious grounds None, Playing fields None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 11 Flood Warning Areas Contains 14 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 61 Listed Buildings Intersects 1 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of STANTON HARCOURT STW catchment is designated either AONB or National Park.	Low

1.261. STANTON ST JOHN STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 2 Nationally designated sites (SSSI and NNR) Holly Wood, Site of Special Scientific Interest Stanton Great Wood, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites	High

	Oxford Meadows, Special Area of Conservation (SAC) Within 2km there are 6 no. SSSI and/or NNR sites Holly Wood, Site of Special Scientific Interest Stanton Great Wood, Site of Special Scientific Interest Waterperry Wood, Site of Special Scientific Interest Sidling's Copse And College Pond, Site of Special Scientific Interest Holton Wood, Site of Special Scientific Interest Shabbington Woods Complex, Site of Special Scientific Interest As a whole less than 1% of STANTON ST JOHN STW catchment, is designated either at an International, National or Local level. Intersects 15 areas of Priority Habitat which makes up 9 % of the STANTON ST JOHN STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 3 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of STANTON ST JOHN STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 96 % of STANTON ST JOHN STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of STREATLEY STW catchment. Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 3 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Lardon Chase, Site of Special Scientific Interest Within 200 meters, there are 5 sensitive receptors (School and education centres, hospitals or residential care homes) Streatley Church Of England Primary School, Schools and Education centres None, Allotments St Mary'S Church, Religious grounds None, Playing fields Lough Down, Public park	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 20 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 29 Listed Buildings Intersects 1 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 2 areas designated as Area of Outstanding Natural Beauty Chilterns, Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of STREATLEY STW catchment is designated either AONB or National Park.	High

1.266. STUDHAM STW Catchment

Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 2 no. SSSI and/or NNR sites Dunstable And Whipsnade Downs, Site of Special Scientific Interest Kensworth Chalk Pit, Site of Special Scientific Interest As a whole 0% of STUDHAM STW catchment, is designated either at an International, National or Local level. Intersects 70 areas of Priority Habitat which makes up 16 % of the STUDHAM STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 11 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 2 religious grounds, 2 playing fields, 0 sports facility, 0 golf courses, 4 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of STUDHAM STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium

Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 99 % of STUDHAM STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of STUDHAM STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 6 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 2 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 2 public park and 0 cemeteries Within 200 meters, there are 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Dunstable And Whipsnade Downs, Site of Special Scientific Interest Kensworth Chalk Pit, Site of Special Scientific Interest Within 200 meters, there are 9 sensitive receptors (School and education centres, hospitals or residential care homes) Studham Church Of England (Voluntary Controlled) Lower School , Allotments St Mary Magdalen'S Church, Religious grounds St Mary'S Church, Religious grounds , Playing fields The Green, Public park Studham Common, Public park , Public park Dunstable Downs, Public park	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 15 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low

North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park	
As a whole 3 % of SWINDON STW catchment is designated either AONB or National Park.	

1.269. TACKLEY STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Oxford Meadows, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Kirtlington Quarry, Site of Special Scientific Interest Shipton-On-Cherwell & Whitehill Farm Quarries, Site of Special Scientific Interest As a whole 0% of TACKLEY STW catchment, is designated either at an International, National or Local level. Intersects 3 areas of Priority Habitat which makes up 1 % of the TACKLEY STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 8 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 2 golf courses, 0 public parks and 1 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of TACKLEY STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include:	Medium

	River Cherwell From Lower Heyford Down To Cherwell Bridge, Flood Warning Areas River Cherwell From Lower Heyford Down To And Including Oxford, Flood Alert Areas Of the total area of the catchment, less than 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 98 % of TACKLEY STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of TACKLEY STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 3 no areas utilised for recreation or which benefit the community. This includes 2 Allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 4 sensitive receptors (School and education centres, hospitals or residential care homes) Tackley Church Of England Primary School, Schools and Education centres None, Allotments St Nicholas'S Church, Religious grounds None, Playing fields	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 15 Flood Warning Areas Contains 11 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 21 Listed Buildings Intersects 1 areas designated as Scheduled Monuments Intersects 2 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered;	Low

	Intersects 0 areas designated as Area of Outstanding Natural Beauty	
	Intersects 0 areas designated as National Park	
	As a whole 0 % of TACKLEY STW catchment is designated either AONB or National Park.	

1.270. TAKELEY STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 2 Nationally designated sites (SSSI and NNR) Hatfield Forest, Site of Special Scientific Interest Hatfield Forest, National Nature Reserve Intersects 1 Locally designated sites (LNR) Flitch Way, Local Nature Reserve Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 2 no. SSSI and/or NNR sites Hatfield Forest, Site of Special Scientific Interest Hatfield Forest, National Nature Reserve As a whole 1% of TAKELEY STW catchment, is designated either at an International, National or Local level. Intersects 6 areas of Priority Habitat which makes up 2 % of the TAKELEY STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 10 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 2 religious grounds, 4 playing fields, 0 sports facility, 0 golf courses, 3 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 3 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of TAKELEY STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones	Medium

	Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: Pincey Brook, Watercourses Pincey Brook From Takeley To Harlow, Flood Alert Areas Of the total area of the catchment, 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a As a whole 100 % of TAKELEY STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of TAKELEY STW catchment. Intersects 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 5 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf course, 3 public park and 0 cemeteries Within 200 meters, there are 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Hatfield Forest, National Nature Reserve Hatfield Forest, Site of Special Scientific Interest Within 200 meters, there are 5 sensitive receptors (School and education centres, hospitals or residential care homes) Roseacres Primary School, Schools and Education centres None, Religious grounds Holy Trinity Church, Religious grounds None, Playing fields Hatfield Forest, Public park	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 92 % of THEYDON BOIS STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of THEYDON BOIS STW catchment. Intersects 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes	Medium

	Intersects 7 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 2 golf course, 2 public park and 0 cemeteries Within 200 meters, there are 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Epping Forest, Special Area of Conservation (SAC) Epping Forest, Site of Special Scientific Interest Within 200 meters, there are 7 sensitive receptors (School and education centres, hospitals or residential care homes) Theydon Bois Primary School, Schools and Education centres None, Allotments St Mary'S Church, Religious grounds All Saints' Church, Religious grounds None, Playing fields None, Golf course Theydon Green, Public park	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 2 Flood Warning Areas Contains 2 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 16 Listed Buildings Intersects 2 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of THEYDON BOIS STW catchment is designated either AONB or National Park.	Low

1.275. THORNWOOD STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR)	High

	Epping Forest, Site of Special Scientific Interest Intersects 1 Locally designated sites (LNR) Thornwood Common Flood Meadow, Local Nature Reserve Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 1 no. SSSI and/or NNR sites Epping Forest, Site of Special Scientific Interest As a whole less than 1% of THORNWOOD STW catchment, is designated either at an International, National or Local level. Intersects 11 areas of Priority Habitat which makes up 5 % of the THORNWOOD STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 3 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 1 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of THORNWOOD STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Cripsey Brook In Epping Forest District Council, Flood Alert Areas Of the total area of the catchment, 16 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 98 % of THORNWOOD STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. This includes 2 Allotments, 3 religious grounds, 5 playing fields, 1 sports facility, 0 golf course, 9 public park and 2 cemeteries Within 200 meters, there are 3 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Chilterns Beechwoods, Special Area of Conservation (SAC) Tring Reservoirs, Site of Special Scientific Interest Tring Woodlands, Site of Special Scientific Interest Within 200 meters, there are 15 sensitive receptors (School and education centres, hospitals or residential care homes) Goldfield Infants And Nursery School, Schools and Education centres Bishop Wood Church Of England Junior School, Schools and Education centres Dundale Primary School And Nursery, Schools and Education centres Grove Road Primary School, Schools and Education centres None, Allotments New Mill Baptist Church, Religious grounds Akeman Street Baptist Church, Religious grounds St Peter And St Paul Church, Religious grounds None, Playing fields None, Sports facility Pond Close, Public park Tring Park, Public park Tring Memorial Gardens, Public park Tring Cemetery, Cemeteries None, Cemeteries	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 11 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 63 Listed Buildings Intersects 0 areas designated as Scheduled Monuments	Medium

	Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Chilterns, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 7 % of TRING STW catchment is designated either AONB or National Park.	High

1.280. TYLERS LANE (BUCKLEBURY) STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Kennet & Lambourn Floodplain, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Kennet Valley Alderwoods, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Briff Lane Meadows, Site of Special Scientific Interest As a whole 0% of TYLERS LANE (BUCKLEBURY) STW catchment, is designated either at an International, National or Local level. Intersects 10 areas of Priority Habitat which makes up less than 1 % of the TYLERS LANE (BUCKLEBURY) STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level	Low

	of urbanisation within it. In respect of TYLERS LANE (BUCKLEBURY) STW catchment 0% is classified as urban.	
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of TYLERS LANE (BUCKLEBURY) STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of TYLERS LANE (BUCKLEBURY) STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Briff Lane Meadows, Site of Special Scientific Interest Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Medium

Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 7 no areas utilised for recreation or which benefit the community. This includes 2 Allotments, 2 religious grounds, 2 playing fields, 1 sports facility, 0 golf course, 0 public park and 0 cemeteries	Medium

	Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 8 sensitive receptors (School and education centres, hospitals or residential care homes) Wanborough Primary School, Schools and Education centres Chiseldon Primary School, Schools and Education centres None, Allotments St Andrew'S Church, Religious grounds All Saints' Church, Religious grounds None, Playing fields None, Sports facility None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 8 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 48 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 58 % of WANBOROUGH STW catchment is designated either AONB or National Park.	High

1.285. WANTAGE STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR)	Medium

	Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Hackpen Hill, Special Area of Conservation (SAC) Cothill Fen, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Whitehorse Hill, Site of Special Scientific Interest Hackpen, Warren & Gramp's Hill Downs, Site of Special Scientific Interest As a whole 0% of WANTAGE STW catchment, is designated either at an International, National or Local level. Intersects 157 areas of Priority Habitat which makes up 2 % of the WANTAGE STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 96 areas currently utilised for recreation or which benefit the community. This includes 18 allotments, 16 religious grounds, 26 playing fields, 3 sports facility, 0 golf courses, 10 public parks and 11 cemeteries. Also within the catchment are 12 areas where vulnerable population groups would be expected. This includes 11 Schools and education centres, 1 hospitals, and 0 residential care homes. This is also reflected in the designation of 3 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of WANTAGE STW catchment 55% is classified as urban.	Medium
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 13 statutory rivers / unnamed water bodies. Water environment features intersected include: Letcombe Brook, Watercourses Ginge Brook, Watercourses Lockinge Brook, Watercourses Betterton Brook, Watercourses West Hendred Brook, Watercourses Goddard's Brook, Watercourses Childrey Brook, Watercourses Letcombe Brook At Wantage, Grove And East Hanney, Flood Warning Areas Letcombe Brook At Letcombe Bassett And Letcombe Regis, Flood Warning Areas River Ock From Watchfield To Abingdon, And Also The Letcombe Brook At Wantage, Grove And East Hanney, Flood Alert Areas Ginge Brook, Flood Alert Areas Of the total area of the catchment, 5 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades:	Medium

	Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 96 % of WANTAGE STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of WANTAGE STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 11 no. sensitive receptors. This includes 10 Schools and education centres, 1 hospitals, and 0 residential care homes Intersects 67 no areas utilised for recreation or which benefit the community. This includes 14 Allotments, 16 religious grounds, 17 playing fields, 2 sports facility, 0 golf course, 10 public park and 8 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 33 sensitive receptors (School and education centres, hospitals or residential care homes) Wantage Church Of England Primary School, Schools and Education centres The Ridgeway Church Of England Primary School, Schools and Education centres St James Church Of England School, Schools and Education centres Grove Church Of England Primary School, Schools and Education centres Millbrook School, Schools and Education centres St Nicholas Church Of England Primary School, Schools and Education centres St Amand'S Roman Catholic Primary School, Schools and Education centres Stockham Primary School, Schools and Education centres Charlton Primary School, Schools and Education centres The Hendreds Church Of England School, Schools and Education centres Gems Wantage Primary Academy, Schools and Education centres Wantage Community Hospital, Hospitals None, Allotments St Amand'S Chapel, Religious grounds St Nicolas Church, Religious grounds St Andrew'S Church, Religious grounds St Laurence'S Church, Religious grounds St Mary'S Church, Religious grounds St John The Baptist'S Church, Religious grounds St Augustine'S Church, Religious grounds All Saints' Church, Religious grounds None, Religious grounds Grove Strict Baptist Chapel, Religious grounds St James'S Church, Religious grounds St James Church, Religious grounds Holy Trinity Church, Religious grounds None, Playing fields None, Sports facility Morland Bowling Club, Sports facility None, Public park The Green, Public park Betjeman Millenium Park, Public park None, Cemeteries	Medium

Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 27 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 58 % of WASH WATER STW catchment is designated either AONB or National Park.	High

1.289. WATLINGTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar)	Medium

	Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Aston Rowant, Special Area of Conservation (SAC) Chilterns Beechwoods, Special Area of Conservation (SAC) Little Wittenham, Special Area of Conservation (SAC) Within 2km there are 4 no. SSSI and/or NNR sites Watlington And Pyrton Hills, Site of Special Scientific Interest Swyncombe Downs, Site of Special Scientific Interest Knightsbridge Lane, Site of Special Scientific Interest Shirburn Hill, Site of Special Scientific Interest As a whole 0% of WATLINGTON STW catchment, is designated either at an International, National or Local level. Intersects 12 areas of Priority Habitat which makes up 2 % of the WATLINGTON STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 11 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 4 religious grounds, 3 playing fields, 1 sports facility, 0 golf courses, 1 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of WATLINGTON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 2 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 3 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Thame And Chalgrove Brook, Flood Alert Areas Of the total area of the catchment, 9 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of WATLINGTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium

Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 1 no. areas designated as Air Quality Management Area as follows: Watlington Aqma, AQMA AQMA's constitute 3 % area of WATLINGTON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 8 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 3 religious grounds, 2 playing fields, 1 sports facility, 0 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 7 sensitive receptors (School and education centres, hospitals or residential care homes) Watlington Primary School, Schools and Education centres None, Allotments Holy Rood Church, Religious grounds St Leonard'S Church, Religious grounds None, Playing fields None, Sports facility None, Public park	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 11 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 135 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Chilterns, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 10 % of WATLINGTON STW catchment is designated either AONB or National Park.	High

The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 16 Flood Warning Areas Contains 16 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 50 Listed Buildings Intersects 12 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of WEYBRIDGE STW catchment is designated either AONB or National Park.	Low

1.294. WHEATLEY STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Littleworth Brick Pit, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Oxford Meadows, Special Area of Conservation (SAC) Within 2km there are 6 no. SSSI and/or NNR sites Littleworth Brick Pit, Site of Special Scientific Interest Lyehill Quarry, Site of Special Scientific Interest	High

	Brasenose Wood And Shotover Hill, Site of Special Scientific Interest Holton Wood, Site of Special Scientific Interest Waterperry Wood, Site of Special Scientific Interest Stanton Great Wood, Site of Special Scientific Interest As a whole less than 1% of WHEATLEY STW catchment, is designated either at an International, National or Local level. Intersects 30 areas of Priority Habitat which makes up 3 % of the WHEATLEY STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 10 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 2 religious grounds, 3 playing fields, 0 sports facility, 0 golf courses, 3 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of WHEATLEY STW catchment 89% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Thame From Below Eythrope To Chiselhampton, Flood Warning Areas River Thame And Chalgrove Brook, Flood Alert Areas Of the total area of the catchment, 9 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 94 % of WHEATLEY STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of WHEATLEY STW catchment.	Medium

	Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 6 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 2 religious grounds, 3 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Littleworth Brick Pit, Site of Special Scientific Interest Within 200 meters, there are 4 sensitive receptors (School and education centres, hospitals or residential care homes) None, Allotments St Mary'S Church, Religious grounds St Bartholomew'S Church, Religious grounds None, Playing fields	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 3 Flood Warning Areas Contains 11 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 76 Listed Buildings Intersects 2 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of WHEATLEY STW catchment is designated either AONB or National Park.	Low

1.295. WHITE RODING STW Catchment

Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 5 Listed Buildings Intersects 0 areas designated as Scheduled Monuments	Low

	Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of WICKHAM STW catchment is designated either AONB or National Park.	High

1.299. WIDFORD STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Patmore Heath, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Wormley-Hoddesdonpark Woods, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 2 no. SSSI and/or NNR sites Patmore Heath, Site of Special Scientific Interest Hillcollins Pit, Site of Special Scientific Interest As a whole 4% of WIDFORD STW catchment, is designated either at an International, National or Local level. Intersects 72 areas of Priority Habitat which makes up 6 % of the WIDFORD STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 27 areas currently utilised for recreation or which benefit the community. This includes 6 allotments, 6 religious grounds, 5 playing fields, 1 sports facility, 2 golf courses, 0 public parks and 2 cemeteries. Also within the catchment are 5 areas where vulnerable population groups would be expected. This includes 5 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 2 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which	Low

	material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of WIDFORD STW catchment 0% is classified as urban.	
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 2 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 3 statutory rivers / unnamed water bodies. Water environment features intersected include: Nimney Bourne, Watercourses River Ash, Watercourses River Ash At Furneux Pelham, Flood Warning Areas River Ash At The Hadhams, Flood Warning Areas River Ash In Hertfordshire, Flood Alert Areas Of the total area of the catchment, 9 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of WIDFORD STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of WIDFORD STW catchment. Intersects 3 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 5 no. sensitive receptors. This includes 5 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 15 no areas utilised for recreation or which benefit the community. This includes 6 Allotments, 5 religious grounds, 3 playing fields, 1 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Patmore Heath, Site of Special Scientific Interest Within 200 meters, there are 15 sensitive receptors (School and education centres, hospitals or residential care homes) Wareside Church Of England Primary School, Schools and Education centres Widford School, Schools and Education centres St Andrew'S Church Of England Primary School, Schools and Education centres Albury Church Of England (Voluntary Aided) Primary School, Schools and Education centres Little Hadham Primary School, Schools and Education centres None, Allotments St Andrew'S Church, Religious grounds Holy Trinty Church, Religious grounds Church Of St Mary The Virgin, Religious grounds Church End Farmhouse, Religious grounds St Cecilia'S Church, Religious grounds	Medium

	None, Playing fields None, Sports facility None, Golf course None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 2 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 238 Listed Buildings Intersects 1 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of WIDFORD STW catchment is designated either AONB or National Park.	Low

1.300. WILLINGALE STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of WINGRAVE STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes	Medium

	Intersects 5 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 1 religious grounds, 1 playing fields, 1 sports facility, 0 golf course, 0 public park and 1 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 6 sensitive receptors (School and education centres, hospitals or residential care homes) Wingrave Church Of England Combined School, Schools and Education centres None, Allotments St Peter And St Paul'S Church, Religious grounds None, Playing fields None, Sports facility None, Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 37 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of WINGRAVE STW catchment is designated either AONB or National Park.	Low

1.304. WINTERBOURNE STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR)	Medium

	Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Kennet & Lambourn Floodplain, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Kennet Valley Alderwoods, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Snelsmore Common, Site of Special Scientific Interest Winterbourne Chalk Pit, Site of Special Scientific Interest As a whole 0% of WINTERBOURNE STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the WINTERBOURNE STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 3 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 2 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of WINTERBOURNE STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Lambourn From Weston To Bagnor Including Boxford, Flood Warning Areas River Lambourn And Its Tributaries From Upper Lambourn Down To Newbury, Flood Alert Areas Of the total area of the catchment, 20 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of WINTERBOURNE STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences	Low

	for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of WINTERBOURNE STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 15 Flood Warning Areas Contains 42 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 4 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of WINTERBOURNE STW catchment is designated either AONB or National Park. SSSI and/or NNR sites Smart'S And Prey Heaths, Site of Special Scientific Interest Horsell Common, Site of Special Scientific Interest Basingstoke Canal, Site of Special Scientific Interest Colony Bog And Bagshot Heath, Site of Special Scientific Interest Papercourt, Site of Special Scientific Interest Whitmoor Common, Site of Special Scientific Interest Ash To Brookwood Heaths, Site of Special Scientific Interest As a whole less than 1% of WOKING STW catchment, is designated either at an International, National or Local level. Intersects 531 areas of Priority Habitat which makes up 6 % of the WOKING STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 143 areas currently utilised for recreation or which benefit the community. This includes 6 allotments, 19 religious grounds, 51 playing fields, 5 sports facility, 11 golf courses, 22 public parks and 5 cemeteries. Also within the catchment are 24 areas where vulnerable population groups would be expected. This includes 20 Schools and education centres, 4 hospitals, and 0 residential care homes. This is also reflected in the designation of 13 no. Noise Important Areas within the catchment.	High

Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of WOKING STW catchment 92% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 4 Drinking Water Safeguard Zones Intersects 11 statutory rivers / unnamed water bodies. Water environment features intersected include: Hoe Stream, Watercourses Basingstoke Canal, Watercourses , Watercourses River Wey, Watercourses Hoe Stream At Woking, Flood Warning Areas River Wey At Old Woking, Flood Warning Areas The Area Of Woking Benefiting From The Hoe Stream Flood Alleviation Scheme, Flood Warning Areas Lower River Wey, Flood Alert Areas Windle Brook And Hale, Mill And Addlestone Bournes, Flood Alert Areas Hoe Stream, Flood Alert Areas Of the total area of the catchment, 4 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 76 % of WOKING STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 2 no. areas designated as Air Quality Management Area as follows: Aqma Order 2, AQMA Aqma For Anchor Hill, AQMA AQMAs constitute less than 1 % area of WOKING STW catchment. Intersects 9 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 22 no. sensitive receptors. This includes 19 Schools and education centres, 3 hospitals, and 0 residential care homes Intersects 95 no areas utilised for recreation or which benefit the community. This includes 3 Allotments, 17 religious grounds, 36 playing fields, 5 sports facility, 7 golf course, 22 public park and 5 cemeteries Within 200 meters, there are 5 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Thames Basin Heaths, Special Protection Area (SPA) Smart'S And Prey Heaths, Site of Special Scientific Interest Horsell Common, Site of Special Scientific Interest Basingstoke Canal, Site of Special Scientific Interest Colony Bog And Bagshot Heath, Site of Special Scientific Interest	High

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 5 Flood Warning Areas Contains 16 Flood Alert Areas	Medium																																																										
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 113 Listed Buildings Intersects 2 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium																																																										
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of WOKING STW catchment is designated either AONB or National Park.	Low																																																										

1.309. WOLVERTON TOWNSEND STW Catchment

Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 1 no. SSSI and/or NNR sites Ashford Hill Woods And Meadows, Site of Special Scientific Interest As a whole 0% of WOLVERTON TOWNSEND STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the WOLVERTON TOWNSEND STW catchment area.	Medium

This includes 2 allotments, 4 religious grounds, 3 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 3 areas where vulnerable population groups would be expected. This includes 3 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of WORMINGHALL STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Thame And Chalgrove Brook, Flood Alert Areas Of the total area of the catchment, 2 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 25 % of WORMINGHALL STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of WORMINGHALL STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 3 no. sensitive receptors. This includes 3 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 9 no areas utilised for recreation or which benefit the community. This includes 2 Allotments, 4 religious grounds, 3 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Within 200 meters, there are 9 sensitive receptors (School and education centres, hospitals or residential care homes) Oakley Church Of England Combined School, Schools and Education centres Ickford School, Schools and Education centres Brill Church Of England Combined School, Schools and Education centres None, Allotments St Mary'S Church, Religious grounds St Peter And St Paul'S Church, Religious grounds St Nicholas'S Church, Religious grounds All Saints' Church, Religious grounds None, Playing fields	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 11 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 103 Listed Buildings Intersects 1 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of WORMINGHALL STW catchment is designated either AONB or National Park.	Low

1.313. YATTENDON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites	Medium

	Hartslock Wood, Special Area of Conservation (SAC) Kennet & Lambourn Floodplain, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Coombe Wood, Frilsham, Site of Special Scientific Interest As a whole 0% of YATTENDON STW catchment, is designated either at an International, National or Local level. Intersects 2 areas of Priority Habitat which makes up less than 1 % of the YATTENDON STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of YATTENDON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of YATTENDON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of YATTENDON STW catchment.	Medium

	Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 1 no. sensitive receptors. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 1 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 2 sensitive receptors (School and education centres, hospitals or residential care homes) Yattendon Church Of England Primary School, Schools and Education centres St Peter And St Paul'S Church, Religious grounds

1. London Catchments

This section of the document presents all proformas for the London Catchments. These are environmental baseline proformas that cover the nine SEA topics. Also reported is the sensitivity assigned to the SEA topic based on the rules presented in Table 4-2 of the Main Report.

GSOs listed in the Catchment Proformas are those briefed for the catchment. Significance of effect for each GSO indicated has therefore been generated and are presented in Appendix E. Where no entry is made against the 'GSO Proposed' row, no GSO has been promoted for this location. They are, nevertheless, included here as they inform part of the environmental baseline gathering exercise. Please see Chapter 11 of the Environmental Report and Appendix E which highlights those GSOs promoted in the Final Plan.

1.1. BECKTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned																																								
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 3 Internationally designated sites (SPA, SAC, Ramsar) Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Intersects 6 Nationally designated sites (SSSI and NNR) <table><tr><td>Brent Reservoir, SSSI</td><td>Hampstead Heath Woods, SSSI</td></tr><tr><td>Epping Forest, SSSI</td><td>Hainault Forest, SSSI</td></tr><tr><td>Walthamstow Reservoirs, SSSI</td><td>Roding Valley Meadows, SSSI</td></tr></table> Intersects 24 Locally designated sites (LNR) <table><tr><td>Ackroyd Drive, LNR</td><td>Mudchute Park Farm, LNR</td></tr><tr><td>Linders Field, LNR</td><td>Roding Valley Meadows, LNR</td></tr><tr><td>St John'S Wood Church Grounds, LNR</td><td>Home Mead, LNR</td></tr><tr><td>Brent Reservoir / Welsh Harp, LNR</td><td>Gillespie Park, LNR</td></tr><tr><td>Tower Hamlets Cemetery Park, LNR</td><td>Wormwood Scrubs, LNR</td></tr><tr><td>Camley Street Nature Park, LNR</td><td>Belsize Wood, LNR</td></tr><tr><td>Springfield Park, LNR</td><td>Gunnersbury Triangle, LNR</td></tr><tr><td>Scrattons Ecopark Amd Extension, LNR</td><td>Barnsbury Wood, LNR</td></tr><tr><td>Westbere Copse, LNR</td><td>Abney Park Cemetery, LNR</td></tr><tr><td>Railway Fields, LNR</td><td>Alexandra Palace & Park, LNR</td></tr><tr><td>Parkland Walk, LNR</td><td>Mayesbrook Park, South, LNR</td></tr><tr><td>Queen'S Wood, LNR</td><td>Adelaide, LNR</td></tr></table> Within 10km there are 5 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Wimbledon Common, Special Area of Conservation (SAC) Richmond Park, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 10 no. SSSI and/or NNR sites <table><tr><td>Brent Reservoir, SSSI</td><td>Roding Valley Meadows, SSSI</td></tr><tr><td>Epping Forest, SSSI</td><td>Walthamstow Marshes, SSSI</td></tr><tr><td>Walthamstow Reservoirs, SSSI</td><td>Barn Elms Wetland Centre, SSSI</td></tr><tr><td>Hampstead Heath Woods, SSSI</td><td>Gilbert'S Pit (Charlton), SSSI</td></tr><tr><td>Hainault Forest, SSSI</td><td>Chingford Reservoirs, SSSI</td></tr></table> As a whole less than 1% of BECKTON STW catchment, is designated either at an International, National or Local level. Intersects 3262 areas of Priority Habitat which makes up 1 % of the BECKTON STW catchment area	Brent Reservoir, SSSI	Hampstead Heath Woods, SSSI	Epping Forest, SSSI	Hainault Forest, SSSI	Walthamstow Reservoirs, SSSI	Roding Valley Meadows, SSSI	Ackroyd Drive, LNR	Mudchute Park Farm, LNR	Linders Field, LNR	Roding Valley Meadows, LNR	St John'S Wood Church Grounds, LNR	Home Mead, LNR	Brent Reservoir / Welsh Harp, LNR	Gillespie Park, LNR	Tower Hamlets Cemetery Park, LNR	Wormwood Scrubs, LNR	Camley Street Nature Park, LNR	Belsize Wood, LNR	Springfield Park, LNR	Gunnersbury Triangle, LNR	Scrattons Ecopark Amd Extension, LNR	Barnsbury Wood, LNR	Westbere Copse, LNR	Abney Park Cemetery, LNR	Railway Fields, LNR	Alexandra Palace & Park, LNR	Parkland Walk, LNR	Mayesbrook Park, South, LNR	Queen'S Wood, LNR	Adelaide, LNR	Brent Reservoir, SSSI	Roding Valley Meadows, SSSI	Epping Forest, SSSI	Walthamstow Marshes, SSSI	Walthamstow Reservoirs, SSSI	Barn Elms Wetland Centre, SSSI	Hampstead Heath Woods, SSSI	Gilbert'S Pit (Charlton), SSSI	Hainault Forest, SSSI	Chingford Reservoirs, SSSI	High

Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 3208 areas currently utilised for recreation or which benefit the community. This includes 170 allotments, 189 religious grounds, 1376 playing fields, 68 sports facility, 15 golf courses, 594 public parks and 71 cemeteries.	High																																								

	Also within the catchment are 725 areas where vulnerable population groups would be expected. This includes 657 Schools and education centres, 68 hospitals, and 0 residential care homes. This is also reflected in the designation of 331 no. Noise Important Areas within the catchment.																																																																			
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of BECKTON STW catchment 98% is classified as urban.	High																																																																		
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 27 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 64 statutory rivers / unnamed water bodies. Water environment features intersected include: <table><tr><td>New River, Watercourses</td><td>Tidal Thames At South Fulham, Flood Warning Areas</td></tr><tr><td>Regent'S Canal, Watercourses</td><td>River Brent In The London Borough Of Brent, Flood Warning Areas</td></tr><tr><td>The Ching, Watercourses</td><td>River Roding In Barking, Flood Warning Areas</td></tr><tr><td>Chigwell Brook, Watercourses</td><td>River Roding At Loughton, Flood Warning Areas</td></tr><tr><td>Grand Union Canal, Watercourses</td><td>River Roding At Abridge, Flood Warning Areas</td></tr><tr><td>River Roding, Watercourses</td><td>Tidal Thames At North Fulham, Flood Warning Areas</td></tr><tr><td>, Watercourses</td><td>Tidal Thames At Mill Meads And East 	Tidal Thames From Putney Bridge To The Hogarth Lane Roundabout, Flood Warning Areas Tidal Thames From Battersea Bridge To Putney Bridge, Flood Warning Areas Tidal Thames From The Mardyke To Barking Creek, Flood Warning Areas River Roding In Redbridge, Flood Warning AreasRiver Roding From Ongar To Stapleford, Flood Warning Areas Of the total area of the catchment, 16 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Tidal Thames Riverside From The Thames Barrier To Putney Bridge, Flood Alert Areas River Brent From Hendon To Brentford, Flood Alert Areas Lower River Lee From Hoddesdon To Canning Town, Flood Alert Areas	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 98 % of BECKTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.		Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 17 no. areas designated as Air Quality Management Area as follows: Hackney Aqma, AQMA Barnet Aqma, AQMA Kensington And Chelsea Aqma, AQMA Redbridge Aqma, AQMA Barking And Dagenham Aqma, AQMA City Of London Aqma, AQMA Waltham Forest Aqma, AQMA Tower Hamlets Aqma, AQMA Ealing Aqma, AQMA Brent Aqma, AQMA Hammersmith And Fulham Aqma, AQMA Hounslow Aqma, AQMA Newham Aqma, AQMA Westminster Aqma, AQMA Camden Aqma, AQMA Haringey Aqma, AQMA Islington Aqma, AQMA AQMAs constitute 94 % area of BECKTON STW catchment. Intersects 37 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 681 no. sensitive receptors. This includes 620 Schools and education centres, 61 hospitals, and 0 residential care homes Intersects 2077 no areas utilised for recreation or which benefit the community. This includes 141 Allotments, 169 religious grounds, 1134 playing fields, 37 sports facility, 10 golf course, 524 public park and 62 cemeteries Within 200 meters, there are 10 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Brent Reservoir, SSSI Epping Forest, SSSI Walthamstow Reservoirs, SSSI Hampstead Heath Woods, SSSI Hainault Forest, SSSI Roding Valley Meadows, SSSI Walthamstow Marshes, SSSI		High

Within 200 meters, there are 1181 sensitive receptors (School and education centres, hospitals or residential care homes)

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 15 Communities at Risk Areas (flooding) Contains 38 Flood Warning Areas Contains 62 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 3 World Heritage Sites Intersects 10896 Listed Buildings Intersects 75 areas designated as Scheduled Monuments Intersects 109 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 3 World Heritage Sites Tower Of London, World heritage sites Palace Of Westminster, Westminster Abbey And St. Margaret'S Church, World heritage sites Maritime Greenwich, World heritage sites	High
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of BECKTON STW catchment is designated either AONB or National Park.	Low

1.2. BEDDINGTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 5 Nationally designated sites (SSSI and NNR) Riddlesdown, SSSI Croham Hurst, SSSI Chipstead Downs, SSSI Woldingham & Oxted Downs, SSSI Farthing Downs And Happy Valley, SSSI Intersects 10 Locally designated sites (LNR) Banstead Woods And Chipstead Downs, LNR Foxley Wood, LNR Streatham Common, LNR Blanchman'S Farm, LNR	High

	The Spinney, Carshalton, LNR Sutton Ecology Centre Grounds, LNR Wandle Valley Wetland, LNR Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Mole Gap To Reigate Escarpment, (SAC) Wimbledon Common, (SAC) Richmond Park, Special Area of Conservation (SAC) Within 2km there are 9 no. SSSI and/or NNR sites Riddlesdown, SSSI Croham Hurst, SSSI Wilderness Island, LNR Bramley Bank, LNR Roundshaw Downs, LNR Chipstead Downs, SSSI Woldingham & Oxted Downs, SSSI Farthing Downs And Happy Valley, SSSI Mole Gap To Reigate Escarpment, SSSI Quarry Hangers, SSSI Banstead Downs, SSSI Reigate Heath, SSSI As a whole less than 1% of BEDDINGTON STW catchment, is designated either at an International, National or Local level. Intersects 1324 areas of Priority Habitat which makes up 3 % of the BEDDINGTON STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 559 areas currently utilised for recreation or which benefit the community. This includes 48 allotments, 78 religious grounds, 138 playing fields, 27 sports facility, 15 golf courses, 117 public parks and 11 cemeteries. Also within the catchment are 125 areas where vulnerable population groups would be expected. This includes 115 Schools and education centres, 10 hospitals, and 0 residential care homes. This is also reflected in the designation of 78 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of BEDDINGTON STW catchment 94% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 10 areas of Source Protections Zones 1 and 2 Intersects 11 Drinking Water Safeguard Zones Intersects 6 statutory rivers / unnamed water bodies. Water environment features intersected include: River Wandle, Watercourses , Watercourses River Wandle At Beddington Park, Flood Warning Areas Norbury Brook At Thornton Heath And Streatham Vale, Flood Warning Areas Groundwater Flooding In The Caterham Bourne Catchment, Flood Alert Areas River Wandle Area In The London Boroughs Of Wandsworth, Merton, Lambeth, Croydon And Sutton, Flood Alert Areas Groundwater Flooding In South East London, Flood Alert Areas Of the total area of the catchment, 3 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades:	Medium

	Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 98 % of BEDDINGTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.																																															
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 6 no. areas designated as Air Quality Management Area as follows: Merton Aqma, AQMA Croydon Aqma, AQMA Lambeth Aqma, AQMA Aqma No.1 (M25), AQMA Hooley Air Quality Management Area, AQMA Sutton Aqma, AQMA AQMA's constitute 74 % area of BEDDINGTON STW catchment. Intersects 9 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 101 no. sensitive receptors. This includes 94 Schools and education centres, 7 hospitals, and 0 residential care homes Intersects 331 no areas utilised for recreation or which benefit the community. This includes 41 Allotments, 67 religious grounds, 85 playing fields, 21 sports facility, 11 golf course, 99 public park and 7 cemeteries Within 200 meters, there are 8 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Mole Gap To Reigate Escarpment, Special Area of Conservation (SAC) Riddlesdown, SSSI Croham Hurst, SSSI Chipstead Downs, SSSI Woldingham & Oxted Downs, SSSI Farthing Downs And Happy Valley, SSSI Mole Gap To Reigate Escarpment, SSSI Quarry Hangers, SSSI Within 200 meters, there are 231 sensitive receptors (School and education centres, hospitals or residential care homes) <table><tr><td>Beddington Park Primary School</td><td>St Margaret'S Catholic Church</td></tr><tr><td>Elmwood Junior School Elmwood Infant School</td><td>Church Of The Good Shepherd</td></tr><tr><td>Broadmead Primary School</td><td>St Peter'S Church</td></tr><tr><td>West Thornton Primary Academy</td><td>None, Religious grounds</td></tr><tr><td>Ecclesbourne Primary School</td><td>Carshalton Beeches Baptist Free Church</td></tr><tr><td>The Crescent Primary School</td><td>St Saviour'S Church</td></tr><tr><td>Rushy Meadow Primary School</td><td>All Saints' Church</td></tr><tr><td>West Thornton Canterbury Hub</td><td>St Michael And All Angels Church</td></tr><tr><td>Muschamp Primary School</td><td>St Andrew'S Church</td></tr><tr><td>Hackbridge Primary School</td><td>The Church Of Jesus Christ The Wisdom Of God</td></tr><tr><td>Culvers House Primary School</td><td>Woodmansterne Baptist Church</td></tr><tr><td>Tweeddale Primary School</td><td>St Aidan'S Roman Catholic Church</td></tr><tr><td>Green Wrythe Primary School</td><td>Bandon Hill Methodist Church</td></tr><tr><td>Harris Junior Academy Carshalton</td><td>St Jude'S Church</td></tr><tr><td>Woodmansterne Primary School</td><td>St Elphege'S Roman Catholic Church</td></tr><tr><td>Chestnut Park Primary School</td><td>Milton Hall, Religious grounds</td></tr><tr><td>Bandon Hill Primary School</td><td>St John'S Church</td></tr><tr><td>All Saints Carshalton Church Of England Primary School</td><td>Church Of The Sacred Heart Of Jesus</td></tr><tr><td>Chipstead Valley Primary School</td><td>St Lawrence'S Church</td></tr><tr><td>Stanley Park Infants School</td><td>St Mary'S Church</td></tr><tr><td>Stanley Park Junior School</td><td>Oakhall Church</td></tr><tr><td>Victor Seymour Infants' School</td><td>Roman Catholic Church Of The Holy Family</td></tr><tr><td>And Children'S Centre</td><td>The Parish Church Of St Matthew Christ Church</td></tr></table>	Beddington Park Primary School	St Margaret'S Catholic Church	Elmwood Junior School Elmwood Infant School	Church Of The Good Shepherd	Broadmead Primary School	St Peter'S Church	West Thornton Primary Academy	None, Religious grounds	Ecclesbourne Primary School	Carshalton Beeches Baptist Free Church	The Crescent Primary School	St Saviour'S Church	Rushy Meadow Primary School	All Saints' Church	West Thornton Canterbury Hub	St Michael And All Angels Church	Muschamp Primary School	St Andrew'S Church	Hackbridge Primary School	The Church Of Jesus Christ The Wisdom Of God	Culvers House Primary School	Woodmansterne Baptist Church	Tweeddale Primary School	St Aidan'S Roman Catholic Church	Green Wrythe Primary School	Bandon Hill Methodist Church	Harris Junior Academy Carshalton	St Jude'S Church	Woodmansterne Primary School	St Elphege'S Roman Catholic Church	Chestnut Park Primary School	Milton Hall, Religious grounds	Bandon Hill Primary School	St John'S Church	All Saints Carshalton Church Of England Primary School	Church Of The Sacred Heart Of Jesus	Chipstead Valley Primary School	St Lawrence'S Church	Stanley Park Infants School	St Mary'S Church	Stanley Park Junior School	Oakhall Church	Victor Seymour Infants' School	Roman Catholic Church Of The Holy Family	And Children'S Centre	The Parish Church Of St Matthew Christ Church	High
