Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 2 Internationally designated sites (SPA, SAC, Ramsar) Wimbledon Common, Special Area of Conservation (SAC) Richmond Park, Special Area of Conservation (SAC) Intersects 5 Nationally designated sites (SSSI and NNR) <table><tr><td>Oxleas Woodlands, SSSI</td><td>Richmond Park, SSSI</td></tr><tr><td>Wimbledon Common, SSSI</td><td>Richmond Park, NNR</td></tr><tr><td>Gilbert'S Pit (Charlton), SSSI</td><td></td></tr></table> Intersects 33 Locally designated sites (LNR) <table><tr><td>Stave Hill Ecology Park, LNR</td><td>Lower Wandle, LNR</td></tr><tr><td>Downham Woodland Walk, LNR</td><td>Myrna Close, LNR</td></tr><tr><td>Oxleas Wood, LNR</td><td>Morden Park, LNR</td></tr><tr><td>Dulwich Upper Wood, LNR</td><td>One Tree Hill, LNR</td></tr><tr><td>Sydenham Hill Wood And Fern Bank, LNR</td><td>Russia Dock Woodland, LNR</td></tr><tr><td>Sutcliffe Park, LNR</td><td>Crossness, LNR</td></tr><tr><td>Lavender Pond, LNR</td><td>Spencer Road Wetlands, LNR</td></tr><tr><td>Sue Godfrey Nature Park, LNR</td><td>Cherry Wood, LNR</td></tr><tr><td>Lesnes Abbey Woods, LNR</td><td>Beckenham Place Park, LNR</td></tr><tr><td>Dacres Wood, LNR</td><td>Bennett'S Hole, LNR</td></tr><tr><td>Oakleigh Way, LNR</td><td>Cranmer Green, LNR</td></tr><tr><td>Nunhead Cemetery, LNR</td><td>Battersea Park Nature Areas, LNR</td></tr><tr><td>Merton Park Green Walks, LNR</td><td>Brookmill Road, LNR</td></tr><tr><td>Maryon Wilson Park & Gilbert'S Pit, LNR</td><td>Barnes Common, LNR</td></tr><tr><td>Ravensbury Park, LNR</td><td>Burnt Ash Pond, LNR</td></tr><tr><td>Pyl Brook, LNR</td><td>Streatham Common, LNR</td></tr><tr><td></td><td>Cannon Hill Common, LNR</td></tr></table> Within 10km there are 7 no. SPAs, SACs and/or Ramsar sites <table><tr><td>Lee Valley, RAMSAR site</td><td>Epping Forest, (SAC)</td></tr><tr><td>South West London Waterbodies, RAMSAR site</td><td>Lee Valley, (SPA)</td></tr><tr><td></td><td>South West London Waterbodies, (SPA)</td></tr></table> Wimbledon Common, (SAC) Richmond Park, (SAC) Within 2km there are 8 no. SSSI and/or NNR sites <table><tr><td>Oxleas Woodlands, SSSI</td><td>Abbey Wood, SSSI</td></tr><tr><td>Wimbledon Common, SSSI</td><td>Barn Elms Wetland Centre, SSSI</td></tr><tr><td>Gilbert'S Pit (Charlton), SSSI</td><td>Elmstead Pit, SSSI</td></tr><tr><td>Richmond Park, SSSI</td><td>Richmond Park, NNR</td></tr></table> As a whole less than 1% of CROSSNESS STW catchment, is designated either at an International, National or Local level. Intersects 2203 areas of Priority Habitat which makes up 2 % of the CROSSNESS STW catchment area.	Oxleas Woodlands, SSSI	Richmond Park, SSSI	Wimbledon Common, SSSI	Richmond Park, NNR	Gilbert'S Pit (Charlton), SSSI		Stave Hill Ecology Park, LNR	Lower Wandle, LNR	Downham Woodland Walk, LNR	Myrna Close, LNR	Oxleas Wood, LNR	Morden Park, LNR	Dulwich Upper Wood, LNR	One Tree Hill, LNR	Sydenham Hill Wood And Fern Bank, LNR	Russia Dock Woodland, LNR	Sutcliffe Park, LNR	Crossness, LNR	Lavender Pond, LNR	Spencer Road Wetlands, LNR	Sue Godfrey Nature Park, LNR	Cherry Wood, LNR	Lesnes Abbey Woods, LNR	Beckenham Place Park, LNR	Dacres Wood, LNR	Bennett'S Hole, LNR	Oakleigh Way, LNR	Cranmer Green, LNR	Nunhead Cemetery, LNR	Battersea Park Nature Areas, LNR	Merton Park Green Walks, LNR	Brookmill Road, LNR	Maryon Wilson Park & Gilbert'S Pit, LNR	Barnes Common, LNR	Ravensbury Park, LNR	Burnt Ash Pond, LNR	Pyl Brook, LNR	Streatham Common, LNR		Cannon Hill Common, LNR	Lee Valley, RAMSAR site	Epping Forest, (SAC)	South West London Waterbodies, RAMSAR site	Lee Valley, (SPA)		South West London Waterbodies, (SPA)	Oxleas Woodlands, SSSI	Abbey Wood, SSSI	Wimbledon Common, SSSI	Barn Elms Wetland Centre, SSSI	Gilbert'S Pit (Charlton), SSSI	Elmstead Pit, SSSI	Richmond Park, SSSI	Richmond Park, NNR	High

Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2511 areas currently utilised for recreation or which benefit the community. This includes 175 allotments, 181 religious grounds, 1004 playing fields, 65 sports facility, 25 golf courses, 501 public parks and 50 cemeteries. Also within the catchment are 510 areas where vulnerable population groups would be expected. This includes 476 Schools and education centres, 34 hospitals, and 0 residential care homes. This is also reflected in the designation of 209 no. Noise Important Areas within the catchment.	High																																								
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of CROSSNESS STW catchment 99% is classified as urban.	High																																								
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 9 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 33 statutory rivers / unnamed water bodies. Water environment features intersected include: <table><tr><td>, Watercourses</td><td>East Pyl Brook At Morden Park, Flood Warning Areas</td></tr><tr><td>River Shuttle, Watercourses</td><td></td></tr><tr><td>Beverley Brook, Watercourses</td><td>River Quaggy At Kidbrooke, Lee And Hither Green, Flood Warning Areas</td></tr><tr><td>Ravensbourne River, Watercourses</td><td>Norbury Brook At Thornton Heath And Streatham Vale, Flood Warning Areas</td></tr><tr><td>River Wandle, Watercourses</td><td>Beverley Brook At Wimbledon Common And Richmond Park, Flood Warning Areas</td></tr><tr><td>Pyl Brook, Watercourses</td><td></td></tr><tr><td>Chaffinch Brook, Watercourses</td><td>Tidal Thames From Putney Bridge To Mortlake High Street East, Flood Warning Areas</td></tr><tr><td>Quaggy River, Watercourses</td><td></td></tr><tr><td>Deptford Creek, Watercourses</td><td>Pyl Brook At North Cheam, Flood Warning Areas</td></tr><tr><td>Pool River, Watercourses</td><td>River Quaggy At Chinbrook, Mottingham And Eltham, Flood Warning Areas</td></tr><tr><td>Coombe Brook, Watercourses</td><td>Properties Around Chinbrook Meadows, Flood Warning Areas</td></tr><tr><td>The Pickle, Watercourses</td><td>Ravensbourne At Lewisham, Flood Warning Areas</td></tr><tr><td>Beck At Beckenham, Flood Warning Areas</td><td>River Wandle At Beddington Park, Flood Warning Areas</td></tr><tr><td>Tidal Thames From Deptford Creek To Rotherhithe Station, Flood Warning Areas</td><td></td></tr><tr><td>River Graveney At Tooting And Colliers Wood, Flood Warning Areas</td><td>Tidal Thames From London Bridge To Hungerford Bridge, Flood Warning Areas</td></tr><tr><td>Tidal Thames From Rotherhithe Station To London Bridge, Flood Warning Areas</td><td>Ravensbourne From Bellingham To Catford, Flood Warning Areas</td></tr><tr><td>Tidal Thames At Walworth, Flood Warning Areas</td><td>Tidal Thames In The Boroughs Of Wandsworth And Richmond-Upon-Thames, Flood Alert Areas</td></tr><tr><td>Pool River At Bell Green And New Beckenham, Flood Warning Areas</td><td></td></tr><tr><td>Tidal Thames At Deptford And Southwark Park, Flood Warning Areas</td><td></td></tr><tr><td>Ravensbourne At Deptford, Flood Warning Areas</td><td></td></tr></table>	, Watercourses	East Pyl Brook At Morden Park, Flood Warning Areas	River Shuttle, Watercourses		Beverley Brook, Watercourses	River Quaggy At Kidbrooke, Lee And Hither Green, Flood Warning Areas	Ravensbourne River, Watercourses	Norbury Brook At Thornton Heath And Streatham Vale, Flood Warning Areas	River Wandle, Watercourses	Beverley Brook At Wimbledon Common And Richmond Park, Flood Warning Areas	Pyl Brook, Watercourses		Chaffinch Brook, Watercourses	Tidal Thames From Putney Bridge To Mortlake High Street East, Flood Warning Areas	Quaggy River, Watercourses		Deptford Creek, Watercourses	Pyl Brook At North Cheam, Flood Warning Areas	Pool River, Watercourses	River Quaggy At Chinbrook, Mottingham And Eltham, Flood Warning Areas	Coombe Brook, Watercourses	Properties Around Chinbrook Meadows, Flood Warning Areas	The Pickle, Watercourses	Ravensbourne At Lewisham, Flood Warning Areas	Beck At Beckenham, Flood Warning Areas	River Wandle At Beddington Park, Flood Warning Areas	Tidal Thames From Deptford Creek To Rotherhithe Station, Flood Warning Areas		River Graveney At Tooting And Colliers Wood, Flood Warning Areas	Tidal Thames From London Bridge To Hungerford Bridge, Flood Warning Areas	Tidal Thames From Rotherhithe Station To London Bridge, Flood Warning Areas	Ravensbourne From Bellingham To Catford, Flood Warning Areas	Tidal Thames At Walworth, Flood Warning Areas	Tidal Thames In The Boroughs Of Wandsworth And Richmond-Upon-Thames, Flood Alert Areas	Pool River At Bell Green And New Beckenham, Flood Warning Areas		Tidal Thames At Deptford And Southwark Park, Flood Warning Areas		Ravensbourne At Deptford, Flood Warning Areas		High

	Tidal Thames From Hungerford Bridge To Battersea Power Station, Flood Warning Areas Tidal Thames From Woolwich Arsenal To Deptford Creek, Flood Warning Areas Tidal Thames From Erith High Street To Thamesmead, Flood Warning Areas Tidal Thames From Thamesmead To Woolwich Arsenal, Flood Warning Areas River Wandle At Wandsworth, Flood Warning Areas Tidal Thames From Battersea Bridge To Wandsworth Bridge, Flood Warning Areas Pyl Brook At West Barnes, Flood Warning Areas Tidal Thames From Wandsworth Bridge To Putney Bridge, Flood Warning Areas Beverley Brook At West Barnes, Flood Warning Areas River Wandle At Wimbledon, Flood Warning Areas River Wandle At Morden, Flood Warning Areas Beverley Brook At Raynes Park, Flood Warning Areas Tidal Thames At South Bermondsey, Flood Warning Areas Tidal Thames At Camberwell, Flood Warning Areas Tidal Thames From Blackfriars Bridge To Vauxhall Bridge, Flood Warning Areas Beverley Brook At Barnes, Flood Warning Areas Tidal Thames From Battersea Power Station To Battersea Bridge, Flood Warning Areas Of the total area of the catchment, 22 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Tidal Thames In The Boroughs Of Greenwich, Lewisham, Southwark, Lambeth And Wandsworth, Flood Alert Areas Tidal Thames Riverside From Putney Bridge To Teddington Weir, Flood Alert Areas Tidal Thames In The Boroughs Of Tower Hamlets, City Of London, City Of Westminster, Ken And Chelsea, Flood Alert Areas Ravensbourne Area In The London Boroughs Of Lewisham, Bromley, Greenwich And Croydon, Flood Alert Areas Beverley Brook Area In Merton, Sutton, Kingston Upon Thames, Richmond Upon Thames And Wandsworth, Flood Alert Areas Tidal Thames In The Boroughs Of Bexley And Greenwich, Flood Alert Areas Groundwater Flooding In South East London, Flood Alert Areas River Wandle Area In The London Boroughs Of Wandsworth, Merton, Lambeth, Croydon And Sutton, Flood Alert Areas Tidal Thames Riverside From Dartford Creek And The Mardyke To The Thames Barrier, Flood Alert Areas Tidal Thames Riverside From The Thames Barrier To Putney Bridge, Flood Alert Areas	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 98 % of CROSSNESS STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.		Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 14 no. areas designated as Air Quality Management Area as follows: Bromley Aqma, AQMA Richmond Aqma, AQMA	Lambeth Aqma, AQMA Croydon Aqma, AQMA	High

	Sutton Aqma, AQMA Kingston Upon Thames Aqma, AQMA Southwark Aqma, AQMA Lewisham Aqma, AQMA Crofton Park And Honor Oak Park Air Quality Management Area, AQMA AQMAs constitute 91 % area of CROSSNESS STW catchment. Intersects 9 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 452 no. sensitive receptors. This includes 423 Schools and education centres, 29 hospitals, and 0 residential care homes Intersects 1626 no areas utilised for recreation or which benefit the community. This includes 131 Allotments, 161 religious grounds, 804 playing fields, 39 sports facility, 20 golf course, 430 public park and 41 cemeteries Within 200 meters, there are 8 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Wimbledon Common, (SAC) Richmond Park, (SAC) Richmond Park, NNR Oxleas Woodlands, SSSI	Wandsworth Aqma, AQMA Greenwich Aqma, AQMA Westminster Aqma, AQMA Merton Aqma, AQMA Bexley Aqma, AQMA Wimbledon Common, SSSI Gilbert'S Pit (Charlton), SSSI Richmond Park, SSSI Abbey Wood, SSSI Within 200 meters, there are 816 sensitive receptors (School and education centres, hospitals or residential care homes)

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 107 Communities at Risk Areas (flooding) Contains 45 Flood Warning Areas Contains 28 Flood Alert Areas			High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 1 World Heritage Sites Intersects 3134 Listed Buildings Intersects 23 areas designated as Scheduled Monuments Intersects 33 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields			High

	Within 500 meters, there are 3 World Heritage Sites Maritime Greenwich, World heritage sites Palace Of Westminster, Westminster Abbey And St. Margaret'S Church, World heritage sites Tower Of London, World heritage sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of CROSSNESS STW catchment is designated either AONB or National Park.	Low

1.4. DEEPHAMS STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 3 Internationally designated sites (SPA, SAC, Ramsar) Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Intersects 6 Nationally designated sites (SSSI and NNR) Epping Forest, SSSI Northaw Great Wood, SSSI Chingford Reservoirs, SSSI Intersects 9 Locally designated sites (LNR) Coppetts Wood And Glebelands, LNR Alexandra Palace & Park, LNR Cheshunt Park, LNR Coldfall Wood, LNR Ainslie Wood, LNR Within 10km there are 4 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Wormley-Hoddesdonpark Woods, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 12 no. SSSI and/or NNR sites Epping Forest, SSSI Northaw Great Wood, SSSI Chingford Reservoirs, SSSI Hampstead Heath Woods, SSSI Cornmill Stream And Old River Lea, SSSI Turnford & Cheshunt Pits, SSSI Walthamstow Reservoirs, SSSI As a whole less than 1% of DEEPHAMS STW catchment, is designated either at an International, National or Local level. Intersects 2075 areas of Priority Habitat which makes up 3 % of the DEEPHAMS STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an	High

	important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1131 areas currently utilised for recreation or which benefit the community. This includes 140 allotments, 88 religious grounds, 320 playing fields, 53 sports facility, 35 golf courses, 227 public parks and 32 cemeteries. Also within the catchment are 236 areas where vulnerable population groups would be expected. This includes 225 Schools and education centres, 11 hospitals, and 0 residential care homes. This is also reflected in the designation of 97 no. Noise Important Areas within the catchment.																																																															
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of DEEPHAMS STW catchment 91% is classified as urban.	High																																																														
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 16 areas of Source Protections Zones 1 and 2 Intersects 5 Drinking Water Safeguard Zones Intersects 95 statutory rivers / unnamed water bodies. Water environment features intersected include: <table><tr><td>Pymme'S Brook, Watercourses</td><td>Small River Lee At Cheshunt, Flood Warning Areas</td></tr><tr><td>Dollis Brook, Watercourses</td><td>Lower River Lee At Hoddesdon And Cheshunt, Flood Warning Areas</td></tr><tr><td>Monken Mead Brook, Watercourses</td><td>Turkey Brook At Enfield, Flood Warning Areas</td></tr><tr><td>River Lea Or Lee, Watercourses</td><td>Dollis Brook From Barnet To Hendon, Flood Warning Areas</td></tr><tr><td>The Ching, Watercourses</td><td>Lower River Lee At Enfield, Flood Warning Areas</td></tr><tr><td>Turkey Brook, Watercourses</td><td>Rags Brook At Flamstead End, Flood Warning Areas</td></tr><tr><td>, Watercourses</td><td>Pymmes Brook From Bowes Park To Edmonton, Flood Warning Areas</td></tr><tr><td>Northaw Brook, Watercourses</td><td>Ching Brook In The London Borough Of Waltham Forest, Flood Warning Areas</td></tr><tr><td>Merryhills Brook, Watercourses</td><td>Trinity Marsh Ditch At Waltham Cross, Flood Warning Areas</td></tr><tr><td>Bounds Green Brook, Watercourses</td><td>Cobbins Brook At Waltham Abbey, Flood Warning Areas</td></tr><tr><td>Folly Brook, Watercourses</td><td>Salmons Brook At Grange Park And Lower Edmonton, Flood Warning Areas</td></tr><tr><td>Hempshill Brook, Watercourses</td><td>Pymmes Brook At East Barnet, Flood Warning Areas</td></tr><tr><td>Salmon'S Brook, Watercourses</td><td>Mutton Brook At Hampstead Garden Suburb, Flood Warning Areas</td></tr><tr><td>Houndsden Gutter, Watercourses</td><td>Silk Stream And The Deans, Edgware, Dollis, Mutton And Wealdstone Brooks, Flood Alert Areas</td></tr><tr><td>Cornmill Stream, Watercourses</td><td>Lower Lee Tributaries, Flood Alert Areas</td></tr><tr><td>Old River Lea Or Lee, Watercourses</td><td>Lower River Lee From Hoddesdon To Canning Town, Flood Alert Areas</td></tr><tr><td>Shirebourne, Watercourses</td><td></td></tr><tr><td>Cobbin'S Brook, Watercourses</td><td></td></tr><tr><td>Theobalds Brook, Watercourses</td><td></td></tr><tr><td>New River, Watercourses</td><td></td></tr><tr><td>Grimes Brook, Watercourses</td><td></td></tr><tr><td>Rags Brook, Watercourses</td><td></td></tr><tr><td>The Moselle, Watercourses</td><td></td></tr><tr><td>Turnford Brook, Watercourses</td><td></td></tr><tr><td>Small River Lea Or Lee, Watercourses</td><td></td></tr><tr><td>Cuffley Brook, Watercourses</td><td></td></tr><tr><td>College Brook, Watercourses</td><td></td></tr><tr><td>Trinity Marsh Ditch, Watercourses</td><td></td></tr><tr><td>Leeging Beech Gutter, Watercourses</td><td></td></tr><tr><td>Lower River Lee At Hackney And Walthamstow, Flood Warning Areas</td><td></td></tr><tr><td>Pymmes Brook At Upper Edmonton And Tottenham, Flood Warning Areas</td><td></td></tr></table> Of the total area of the catchment, 9 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Pymme'S Brook, Watercourses	Small River Lee At Cheshunt, Flood Warning Areas	Dollis Brook, Watercourses	Lower River Lee At Hoddesdon And Cheshunt, Flood Warning Areas	Monken Mead Brook, Watercourses	Turkey Brook At Enfield, Flood Warning Areas	River Lea Or Lee, Watercourses	Dollis Brook From Barnet To Hendon, Flood Warning Areas	The Ching, Watercourses	Lower River Lee At Enfield, Flood Warning Areas	Turkey Brook, Watercourses	Rags Brook At Flamstead End, Flood Warning Areas	, Watercourses	Pymmes Brook From Bowes Park To Edmonton, Flood Warning Areas	Northaw Brook, Watercourses	Ching Brook In The London Borough Of Waltham Forest, Flood Warning Areas	Merryhills Brook, Watercourses	Trinity Marsh Ditch At Waltham Cross, Flood Warning Areas	Bounds Green Brook, Watercourses	Cobbins Brook At Waltham Abbey, Flood Warning Areas	Folly Brook, Watercourses	Salmons Brook At Grange Park And Lower Edmonton, Flood Warning Areas	Hempshill Brook, Watercourses	Pymmes Brook At East Barnet, Flood Warning Areas	Salmon'S Brook, Watercourses	Mutton Brook At Hampstead Garden Suburb, Flood Warning Areas	Houndsden Gutter, Watercourses	Silk Stream And The Deans, Edgware, Dollis, Mutton And Wealdstone Brooks, Flood Alert Areas	Cornmill Stream, Watercourses	Lower Lee Tributaries, Flood Alert Areas	Old River Lea Or Lee, Watercourses	Lower River Lee From Hoddesdon To Canning Town, Flood Alert Areas	Shirebourne, Watercourses		Cobbin'S Brook, Watercourses		Theobalds Brook, Watercourses		New River, Watercourses		Grimes Brook, Watercourses		Rags Brook, Watercourses		The Moselle, Watercourses		Turnford Brook, Watercourses		Small River Lea Or Lee, Watercourses		Cuffley Brook, Watercourses		College Brook, Watercourses		Trinity Marsh Ditch, Watercourses		Leeging Beech Gutter, Watercourses		Lower River Lee At Hackney And Walthamstow, Flood Warning Areas		Pymmes Brook At Upper Edmonton And Tottenham, Flood Warning Areas		High

Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades:	Medium																																																														

	Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 96 % of DEEPHAMS STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.																																																																															
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 12 no. areas designated as Air Quality Management Area as follows: <table><tr><td>Extension To Aqma 1, AQMA</td><td>Monarchs Way, AQMA</td></tr><tr><td>Aqma 7 High Road In Wormley (A1170), AQMA</td><td>Haringey Aqma, AQMA</td></tr><tr><td>Aqma 6 Great Cambridge Road (A10), AQMA</td><td>Monarchs Way / Winston Churchill Way, AQMA</td></tr><tr><td>Redbridge Aqma, AQMA</td><td>Barnet Aqma, AQMA</td></tr><tr><td>Hackney Aqma, AQMA</td><td>Camden Aqma, AQMA</td></tr><tr><td>Aqma No.4 Eleanor Cross Road /</td><td>Enfield Aqma, AQMA</td></tr><tr><td></td><td>Waltham Forest Aqma, AQMA</td></tr></table> AQMA's constitute 83 % area of DEEPHAMS STW catchment. Intersects 47 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 216 no. sensitive receptors. This includes 206 Schools and education centres, 10 hospitals, and 0 residential care homes Intersects 738 no areas utilised for recreation or which benefit the community. This includes 117 Allotments, 81 religious grounds, 238 playing fields, 44 sports facility, 28 golf course, 207 public park and 23 cemeteries Within 200 meters, there are 11 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) <table><tr><td>Lee Valley, RAMSAR site</td><td>Hampstead Heath Woods, SSSI</td></tr><tr><td>Epping Forest, Special Area of Conservation (SAC)</td><td>Cornmill Stream And Old River Lea, SSSI</td></tr><tr><td>Lee Valley, Special Protection Area (SPA)</td><td>Turnford & Cheshunt Pits, SSSI</td></tr><tr><td>Epping Forest, SSSI</td><td>Walthamstow Reservoirs, SSSI</td></tr><tr><td>Northaw Great Wood, SSSI</td><td>Waltham Abbey, SSSI</td></tr><tr><td>Chingford Reservoirs, SSSI</td><td></td></tr></table> Within 200 meters, there are 437 sensitive receptors (School and education centres, hospitals or residential care homes) <table><tr><td>Eden Primary School</td><td>South Harringay Junior School</td></tr><tr><td>Devonshire Hill Primary School</td><td>Woodford Green Primary School</td></tr><tr><td>Wilbury Primary School</td><td>North Harringay Primary School</td></tr><tr><td>Firs Farm Primary School</td><td>Wells Primary School</td></tr><tr><td>Oakthorpe Primary School</td><td>North Middlesex University Hospital</td></tr><tr><td>Highfield Primary School</td><td>Barnet Hospital</td></tr><tr><td>St Paul'S Church Of England Primary School</td><td>Bullimore House/Finchley Memorial Hospital</td></tr><tr><td>Hazelwood Schools</td><td>St Ann'S Hospital</td></tr><tr><td>St Michael-At-Bowes Church Of England Junior School</td><td>Cheshunt Community Hospital</td></tr><tr><td>Tottenham Infant School</td><td>The Priory Hospital North London</td></tr><tr><td>And Children'S Centre</td><td>Redford Lodge Psychiatric Hospital</td></tr><tr><td>Hazelbury Primary School</td><td>The Cavell Hospital</td></tr><tr><td>St Martin Of Porres Primary School</td><td>Chase Farm Hospital</td></tr><tr><td>Summerside Primary School</td><td>The Kings Oak Private Hospital</td></tr><tr><td>Bounds Green Junior And Infants Schools</td><td>Holly House, Hospitals</td></tr><tr><td>Hollickwood School</td><td>None, Allotments</td></tr><tr><td>Earlham Primary School</td><td>Cadmore Lane Allotment</td></tr><tr><td>Coppetts Wood Primary School</td><td>Trinity South Allotment Gardens</td></tr><tr><td>Rhodes Avenue Primary School</td><td>Trinity North Allotment Gardens</td></tr><tr><td>Raglan Infant School</td><td>Holdbrook Allotment Gardens</td></tr><tr><td>The Raglan Junior School</td><td>St Bartholomew'S Church</td></tr><tr><td>Starks Field Primary School</td><td>St Mary'S Church</td></tr><tr><td>Risley Avenue Primary School</td><td>Community Church Of God</td></tr><tr><td>St Catherine'S Primary School</td><td>St Ann'S Church</td></tr><tr><td>St Ann'S Church Of England Primary School</td><td>Woodberry Down Baptist Church</td></tr><tr><td></td><td>Christ Church</td></tr></table>	Extension To Aqma 1, AQMA	Monarchs Way, AQMA	Aqma 7 High Road In Wormley (A1170), AQMA	Haringey Aqma, AQMA	Aqma 6 Great Cambridge Road (A10), AQMA	Monarchs Way / Winston Churchill Way, AQMA	Redbridge Aqma, AQMA	Barnet Aqma, AQMA	Hackney Aqma, AQMA	Camden Aqma, AQMA	Aqma No.4 Eleanor Cross Road /	Enfield Aqma, AQMA		Waltham Forest Aqma, AQMA	Lee Valley, RAMSAR site	Hampstead Heath Woods, SSSI	Epping Forest, Special Area of Conservation (SAC)	Cornmill Stream And Old River Lea, SSSI	Lee Valley, Special Protection Area (SPA)	Turnford & Cheshunt Pits, SSSI	Epping Forest, SSSI	Walthamstow Reservoirs, SSSI	Northaw Great Wood, SSSI	Waltham Abbey, SSSI	Chingford Reservoirs, SSSI		Eden Primary School	South Harringay Junior School	Devonshire Hill Primary School	Woodford Green Primary School	Wilbury Primary School	North Harringay Primary School	Firs Farm Primary School	Wells Primary School	Oakthorpe Primary School	North Middlesex University Hospital	Highfield Primary School	Barnet Hospital	St Paul'S Church Of England Primary School	Bullimore House/Finchley Memorial Hospital	Hazelwood Schools	St Ann'S Hospital	St Michael-At-Bowes Church Of England Junior School	Cheshunt Community Hospital	Tottenham Infant School	The Priory Hospital North London	And Children'S Centre	Redford Lodge Psychiatric Hospital	Hazelbury Primary School	The Cavell Hospital	St Martin Of Porres Primary School	Chase Farm Hospital	Summerside Primary School	The Kings Oak Private Hospital	Bounds Green Junior And Infants Schools	Holly House, Hospitals	Hollickwood School	None, Allotments	Earlham Primary School	Cadmore Lane Allotment	Coppetts Wood Primary School	Trinity South Allotment Gardens	Rhodes Avenue Primary School	Trinity North Allotment Gardens	Raglan Infant School	Holdbrook Allotment Gardens	The Raglan Junior School	St Bartholomew'S Church	Starks Field Primary School	St Mary'S Church	Risley Avenue Primary School	Community Church Of God	St Catherine'S Primary School	St Ann'S Church	St Ann'S Church Of England Primary School	Woodberry Down Baptist Church		Christ Church	High

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 113 Communities at Risk Areas (flooding) Contains 42 Flood Warning Areas Contains 60 Flood Alert Areas		High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 852 Listed Buildings Intersects 13 areas designated as Scheduled Monuments Intersects 10 areas designated as Registered parks and gardens Intersects 1 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites		High
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of DEEPHAMS STW catchment is designated either AONB or National Park.		Low

1.5. HOGSMILL STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new	High

	development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 1 Internationally designated sites (SPA, SAC, Ramsar) Richmond Park, Special Area of Conservation (SAC) Intersects 6 Nationally designated sites (SSSI and NNR) Banstead Downs, SSSI Stones Road Pond, SSSI Epsom And Ashted Commons, SSSI Richmond Park, SSSI Ashted Common, NNR Richmond Park, NNR Intersects 20 Locally designated sites (LNR) Anton Crescent Wetland, LNR Hogsmill River Park, LNR Hogsmill, LNR Ham Common, Richmond, London, LNR Rose Walk, LNR Morden Park, LNR Raeburn Open Space, LNR The Wood And Richard Jefferies Bird Sanctuary, LNR Southwood Open Space, LNR Tolworth Court Farm Fields, LNR Within 10km there are 6 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Richmond Park, Special Area of Conservation (SAC) Wimbledon Common, Special Area of Conservation (SAC) Mole Gap To Reigate Escarpment, Special Area of Conservation (SAC) South West London Waterbodies, Special Protection Area (SPA) Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 10 no. SSSI and/or NNR sites Banstead Downs, SSSI Stones Road Pond, SSSI Epsom And Ashted Commons, SSSI Richmond Park, SSSI Wimbledon Common, SSSI Horton Country Park, LNR Belmont Pastures, LNR Epsom Common, LNR Elmbridge Open Space, LNR Edith Gardens Nature Reserve, LNR Devonshire Avenue Nature Area, LNR Cuddington Meadows, LNR Bonesgate Open Space, LNR Castle Hill, LNR Coombe Wood, LNR	
	As a whole less than 1% of HOGSMILL STW catchment, is designated either at an International, National or Local level. Intersects 869 areas of Priority Habitat which makes up 2 % of the HOGSMILL STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 497 areas currently utilised for recreation or which benefit the community. This includes 64 allotments, 52 religious grounds, 131 playing fields, 25 sports facility, 26 golf courses, 77 public parks and 14 cemeteries. Also within the catchment are 108 areas where vulnerable population groups would be expected. This includes 94 Schools and education centres, 14 hospitals, and 0 residential care homes. This is also reflected in the designation of 34 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of HOGSMILL STW catchment 97% is classified as urban.	High

Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 5 areas of Source Protections Zones 1 and 2 Intersects 8 Drinking Water Safeguard Zones Intersects 18 statutory rivers / unnamed water bodies. Water environment features intersected include: <table><tr><td>Hogsmill River, Watercourses</td><td>River Thames At Kingston-Upon-Thames, Flood Warning Areas</td></tr><tr><td>, Watercourses</td><td>Surbiton Stream At Kingston, Flood Warning Areas</td></tr><tr><td>The Creek, Watercourses</td><td>Beverley Brook At Worcester Park, Flood Warning Areas</td></tr><tr><td>River Hogsmill, Watercourses</td><td>Beverley Brook At Wimbledon Common And Richmond Park, Flood Warning Areas</td></tr><tr><td>Beverley Brook, Watercourses</td><td>River Hogsmill Area From Ewell To Kingston Upon Thames, Flood Alert Areas</td></tr><tr><td>Pyl Brook, Watercourses</td><td>Groundwater Flooding In South East London, Flood Alert Areas</td></tr><tr><td>River Thames At Thames Ditton, Flood Warning Areas</td><td>River Mole And Its Tributaries From Kinnerley Manor To South Hersham, Flood Alert Areas</td></tr><tr><td>Beverley Brook At West Barnes, Flood Warning Areas</td><td>River Thames From Hampton And Thames Ditton To Teddington, Flood Alert Areas</td></tr><tr><td>River Hogsmill At Ewell Court, Ruxley And Old Malden, Flood Warning Areas</td><td>Beverley Brook Area In Merton, Sutton, Kingston Upon Thames, Richmond Upon Thames And Wandsworth, Flood Alert Areas</td></tr><tr><td>Beverley Brook At Raynes Park, Flood Warning Areas</td><td></td></tr><tr><td>Pyl Brook At North Cheam, Flood Warning Areas</td><td></td></tr><tr><td>River Hogsmill At Kingston, Flood Warning Areas</td><td></td></tr><tr><td>Properties Closest To The River Thames From Raven'S Ait To Teddington Weir, Flood Warning Areas</td><td></td></tr><tr><td>Areas</td><td>River Hogsmill At Ewell, Flood Warning Areas</td></tr><tr><td>East Pyl Brook At Morden Park, Flood Warning Areas</td><td></td></tr></table> Of the total area of the catchment, 5 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Hogsmill River, Watercourses	River Thames At Kingston-Upon-Thames, Flood Warning Areas	, Watercourses	Surbiton Stream At Kingston, Flood Warning Areas	The Creek, Watercourses	Beverley Brook At Worcester Park, Flood Warning Areas	River Hogsmill, Watercourses	Beverley Brook At Wimbledon Common And Richmond Park, Flood Warning Areas	Beverley Brook, Watercourses	River Hogsmill Area From Ewell To Kingston Upon Thames, Flood Alert Areas	Pyl Brook, Watercourses	Groundwater Flooding In South East London, Flood Alert Areas	River Thames At Thames Ditton, Flood Warning Areas	River Mole And Its Tributaries From Kinnerley Manor To South Hersham, Flood Alert Areas	Beverley Brook At West Barnes, Flood Warning Areas	River Thames From Hampton And Thames Ditton To Teddington, Flood Alert Areas	River Hogsmill At Ewell Court, Ruxley And Old Malden, Flood Warning Areas	Beverley Brook Area In Merton, Sutton, Kingston Upon Thames, Richmond Upon Thames And Wandsworth, Flood Alert Areas	Beverley Brook At Raynes Park, Flood Warning Areas		Pyl Brook At North Cheam, Flood Warning Areas		River Hogsmill At Kingston, Flood Warning Areas		Properties Closest To The River Thames From Raven'S Ait To Teddington Weir, Flood Warning Areas		Areas	River Hogsmill At Ewell, Flood Warning Areas	East Pyl Brook At Morden Park, Flood Warning Areas		High

Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 96 % of HOGSMILL STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium																														
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 8 no. areas designated as Air Quality Management Area as follows: <table><tr><td>Kingston Upon Thames Aqma, AQMA</td><td>Wandsworth Aqma, AQMA</td></tr><tr><td>Ewell Aqma, AQMA</td><td>Richmond Aqma, AQMA</td></tr><tr><td>Sutton Aqma, AQMA</td><td>Merton Aqma, AQMA</td></tr><tr><td>Aqma No.1 (M25), AQMA</td><td>Aqma No.8, AQMA</td></tr></table> AQMAs constitute 59 % area of HOGSMILL STW catchment. Intersects 8 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 95 no. sensitive receptors. This includes 83 Schools and education centres, 12 hospitals, and 0 residential care homes	Kingston Upon Thames Aqma, AQMA	Wandsworth Aqma, AQMA	Ewell Aqma, AQMA	Richmond Aqma, AQMA	Sutton Aqma, AQMA	Merton Aqma, AQMA	Aqma No.1 (M25), AQMA	Aqma No.8, AQMA	High

Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the	High																																																																

	environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1341 areas currently utilised for recreation or which benefit the community. This includes 157 allotments, 162 religious grounds, 341 playing fields, 54 sports facility, 56 golf courses, 269 public parks and 43 cemeteries. Also within the catchment are 259 areas where vulnerable population groups would be expected. This includes 241 Schools and education centres, 18 hospitals, and 0 residential care homes. This is also reflected in the designation of 125 no. Noise Important Areas within the catchment.																															
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of LONG REACH STW catchment 85% is classified as urban.	High																														
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 26 areas of Source Protections Zones 1 and 2 Intersects 11 Drinking Water Safeguard Zones Intersects 102 statutory rivers / unnamed water bodies. Water environment features intersected include: <table><tr><td>, Watercourses</td><td>Dartford, Crayford And Greenhithe, Flood Warning Areas</td></tr><tr><td>The Beck, Watercourses</td><td>Ravensbourne At Bromley, Flood Warning Areas</td></tr><tr><td>River Darent, Watercourses</td><td>River Shuttle At Blackfen, Sidcup, Old Bexley And Crayford, Flood Warning Areas</td></tr><tr><td>Cross Dyke, Watercourses</td><td>River Darent At Dartford Trade Park, Brooklands And Dartford To The Thames Estuary, Flood Warning Areas</td></tr><tr><td>River Cray, Watercourses</td><td>Properties Seaward Side Of Tidal Defences From Greenhithe To Gravesend, Flood Warning Areas</td></tr><tr><td>River Shuttle, Watercourses</td><td>River Darent From Westerham To Sevenoaks, Flood Warning Areas</td></tr><tr><td>Manor Drain, Watercourses</td><td>River Darent From Otford To Darenth, Flood Warning Areas</td></tr><tr><td>Stanham River, Watercourses</td><td>Beck At Beckenham, Flood Warning Areas</td></tr><tr><td>Ravens Bourne, Watercourses</td><td>Shuttle And Cray, Flood Alert Areas</td></tr><tr><td>Kyd Brook, Watercourses</td><td>River Darent From Westerham To Dartford, Flood Alert Areas</td></tr><tr><td>Ravensbourne River, Watercourses</td><td>Coast From Dartford To Allhallows, Flood Alert Areas</td></tr><tr><td>Wyncham Stream, Watercourses</td><td>Ravensbourne Area In The London Boroughs Of Lewisham, Bromley, Greenwich And Croydon, Flood Alert Areas</td></tr><tr><td>Chaffinch Brook, Watercourses</td><td>Tidal Thames Riverside From Dartford Creek And The Mardyke To The Thames Barrier, Flood Alert Areas</td></tr><tr><td>Quaggy River, Watercourses</td><td>Tidal Thames In The Boroughs Of Bexley And Greenwich, Flood Alert Areas</td></tr><tr><td>Ravensbourne From Bellingham To Catford, Flood Warning Areas</td><td>Groundwater Flooding In South East London, Flood Alert Areas</td></tr></table> Tidal Thames From Dartford Creek To Erith High Street East, Flood Warning Areas Chaffinch Brook And St James Stream At Elmers End, Flood Warning Areas Kyd Brook At Petts Wood, Flood Warning Areas Tidal Thames From Erith High Street To Thamesmead, Flood Warning Areas River Cray In St Marys Cray, Sidcup, Bexley And Crayford, Flood Warning Areas Kyd Brook At Sundridge Park, Flood Warning Areas Pool River At Bell Green And New Beckenham, Flood Warning Areas River Quaggy At Chinbrook, Mottingham And Eltham, Flood Warning Areas Properties Around Chinbrook Meadows, Flood Warning Areas	, Watercourses	Dartford, Crayford And Greenhithe, Flood Warning Areas	The Beck, Watercourses	Ravensbourne At Bromley, Flood Warning Areas	River Darent, Watercourses	River Shuttle At Blackfen, Sidcup, Old Bexley And Crayford, Flood Warning Areas	Cross Dyke, Watercourses	River Darent At Dartford Trade Park, Brooklands And Dartford To The Thames Estuary, Flood Warning Areas	River Cray, Watercourses	Properties Seaward Side Of Tidal Defences From Greenhithe To Gravesend, Flood Warning Areas	River Shuttle, Watercourses	River Darent From Westerham To Sevenoaks, Flood Warning Areas	Manor Drain, Watercourses	River Darent From Otford To Darenth, Flood Warning Areas	Stanham River, Watercourses	Beck At Beckenham, Flood Warning Areas	Ravens Bourne, Watercourses	Shuttle And Cray, Flood Alert Areas	Kyd Brook, Watercourses	River Darent From Westerham To Dartford, Flood Alert Areas	Ravensbourne River, Watercourses	Coast From Dartford To Allhallows, Flood Alert Areas	Wyncham Stream, Watercourses	Ravensbourne Area In The London Boroughs Of Lewisham, Bromley, Greenwich And Croydon, Flood Alert Areas	Chaffinch Brook, Watercourses	Tidal Thames Riverside From Dartford Creek And The Mardyke To The Thames Barrier, Flood Alert Areas	Quaggy River, Watercourses	Tidal Thames In The Boroughs Of Bexley And Greenwich, Flood Alert Areas	Ravensbourne From Bellingham To Catford, Flood Warning Areas	Groundwater Flooding In South East London, Flood Alert Areas	High

Ravensbourne From Bellingham To Catford, Flood Warning Areas	Groundwater Flooding In South East London, Flood Alert Areas																															
	Of the total area of the catchment, 7 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.																															
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination	Medium																														

	or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 95 % of LONG REACH STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.																																																																																													
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 17 no. areas designated as Air Quality Management Area as follows: <table><tr><td>Bromley Aqma, AQMA</td><td>Aqma No. 13 (A25), AQMA</td></tr><tr><td>Aqma No. 14 (Junction Or Brichwood And London Roads, Swanley, AQMA</td><td>Aqma No.1 (M20), AQMA</td></tr><tr><td>Greenwich Aqma, AQMA</td><td>Aqma No.4 (A20(T)), AQMA</td></tr><tr><td>Croydon Aqma, AQMA</td><td>Aqma No.2 (M25), AQMA</td></tr><tr><td>Dartford Aqma No.1, AQMA</td><td>Dartford Aqma No.2, AQMA</td></tr><tr><td>Dartford Aqma No.4, AQMA</td><td>Aqma No. 8 (Swanley Town Centre), AQMA</td></tr><tr><td>Dartford Aqma No.3, AQMA</td><td>Bexley Aqma, AQMA</td></tr><tr><td>Aqma No.6 (M25-Pm10), AQMA</td><td>Aqma No.3 (M26), AQMA</td></tr><tr><td>Aqma No.10 (Sevenoaks High Street), AQMA</td><td></td></tr></table> AQMAs constitute 43 % area of LONG REACH STW catchment. Intersects 23 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 231 no. sensitive receptors. This includes 214 Schools and education centres, 17 hospitals, and 0 residential care homes Intersects 836 no areas utilised for recreation or which benefit the community. This includes 132 Allotments, 143 religious grounds, 213 playing fields, 39 sports facility, 41 golf course, 237 public park and 31 cemeteries Within 200 meters, there are 19 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) <table><tr><td>Sevenoaks Gravel Pits, SSSI</td><td>Oxleas Woodlands, SSSI</td></tr><tr><td>Westerham Mines, SSSI</td><td>Darenth Wood, SSSI</td></tr><tr><td>Ruxley Gravel Pits, SSSI</td><td>Wansunt Pit, SSSI</td></tr><tr><td>Otford To Shoreham Downs, SSSI</td><td>Saltbox Hill, SSSI</td></tr><tr><td>Scords Wood And Brockhoul Mount, SSSI</td><td>Knole Park, SSSI</td></tr><tr><td>Keston And Hayes Commons, SSSI</td><td>Hubbard'S Hill, SSSI</td></tr><tr><td>Elmstead Pit, SSSI</td><td>Farningham Wood, SSSI</td></tr><tr><td>Downe Bank And High Elms, SSSI</td><td>Westerham Wood, SSSI</td></tr><tr><td>Crofton Woods, SSSI</td><td>Greatness Brickworks, SSSI</td></tr><tr><td></td><td>Dryhill, SSSI</td></tr></table> Within 200 meters, there are 490 sensitive receptors (School and education centres, hospitals or residential care homes) <table><tr><td>Bursted Wood Primary School</td><td>Pratts Bottom Primary School</td><td>St John The Baptist'S Church</td></tr><tr><td>Bean Primary School</td><td>Rowdown Primary School</td><td>Church Of St Mary Of</td></tr><tr><td>Hartley Primary School,</td><td>Wolsey Junior Academy Good</td><td>Nazareth</td></tr><tr><td>Schools and Education centres</td><td>Shepherd Catholic</td><td>The Church Of St Giles The</td></tr><tr><td>New Ash Green Primary</td><td>Primary And Nursery School</td><td>Abbot</td></tr><tr><td>School</td><td>Applegarth Academy</td><td>Keston Parish Church</td></tr><tr><td>Our Lady Of Hartley Roman</td><td>Green Street Green Primary</td><td>Roman Catholic Church Of The</td></tr><tr><td>Catholic Primary School</td><td>School</td><td>Holy Family</td></tr><tr><td>Blenheim Primary School And</td><td>Amherst School</td><td>St Alban'S Church</td></tr><tr><td>Nursery</td><td>Lessness Heath Primary School</td><td>None, Playing fields</td></tr><tr><td>The Anthony Roper Primary</td><td>Bedonwell Infant And Nursery</td><td>The Copse And The</td></tr><tr><td>School</td><td>School</td><td>Firs Children'S Play Area</td></tr><tr><td>St Philomena'S Roman Catholic</td><td>Bedonwell Junior School</td><td>Hill Rise Playground</td></tr><tr><td>Primary School</td><td>Ide Hill Church Of England</td><td>Playground</td></tr><tr><td>Fawkham Church Of England</td><td>Primary School</td><td>Jessamine Place Play Area</td></tr><tr><td>(Voluntary Controlled) Primary</td><td>Churchill Church Of England</td><td>Attlee Drive Play Area</td></tr><tr><td>School</td><td>Voluntary Controlled Primary</td><td>None, Sports facility</td></tr><tr><td>Crockenhill Primary School</td><td>School</td><td>Bromley Bowling Club</td></tr></table>	Bromley Aqma, AQMA	Aqma No. 13 (A25), AQMA	Aqma No. 14 (Junction Or Brichwood And London Roads, Swanley, AQMA	Aqma No.1 (M20), AQMA	Greenwich Aqma, AQMA	Aqma No.4 (A20(T)), AQMA	Croydon Aqma, AQMA	Aqma No.2 (M25), AQMA	Dartford Aqma No.1, AQMA	Dartford Aqma No.2, AQMA	Dartford Aqma No.4, AQMA	Aqma No. 8 (Swanley Town Centre), AQMA	Dartford Aqma No.3, AQMA	Bexley Aqma, AQMA	Aqma No.6 (M25-Pm10), AQMA	Aqma No.3 (M26), AQMA	Aqma No.10 (Sevenoaks High Street), AQMA		Sevenoaks Gravel Pits, SSSI	Oxleas Woodlands, SSSI	Westerham Mines, SSSI	Darenth Wood, SSSI	Ruxley Gravel Pits, SSSI	Wansunt Pit, SSSI	Otford To Shoreham Downs, SSSI	Saltbox Hill, SSSI	Scords Wood And Brockhoul Mount, SSSI	Knole Park, SSSI	Keston And Hayes Commons, SSSI	Hubbard'S Hill, SSSI	Elmstead Pit, SSSI	Farningham Wood, SSSI	Downe Bank And High Elms, SSSI	Westerham Wood, SSSI	Crofton Woods, SSSI	Greatness Brickworks, SSSI		Dryhill, SSSI	Bursted Wood Primary School	Pratts Bottom Primary School	St John The Baptist'S Church	Bean Primary School	Rowdown Primary School	Church Of St Mary Of	Hartley Primary School,	Wolsey Junior Academy Good	Nazareth	Schools and Education centres	Shepherd Catholic	The Church Of St Giles The	New Ash Green Primary	Primary And Nursery School	Abbot	School	Applegarth Academy	Keston Parish Church	Our Lady Of Hartley Roman	Green Street Green Primary	Roman Catholic Church Of The	Catholic Primary School	School	Holy Family	Blenheim Primary School And	Amherst School	St Alban'S Church	Nursery	Lessness Heath Primary School	None, Playing fields	The Anthony Roper Primary	Bedonwell Infant And Nursery	The Copse And The	School	School	Firs Children'S Play Area	St Philomena'S Roman Catholic	Bedonwell Junior School	Hill Rise Playground	Primary School	Ide Hill Church Of England	Playground	Fawkham Church Of England	Primary School	Jessamine Place Play Area	(Voluntary Controlled) Primary	Churchill Church Of England	Attlee Drive Play Area	School	Voluntary Controlled Primary	None, Sports facility	Crockenhill Primary School	School	Bromley Bowling Club	High

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 150 Communities at Risk Areas (flooding) Contains 31 Flood Warning Areas Contains 18 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 1401 Listed Buildings Intersects 27 areas designated as Scheduled Monuments Intersects 16 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Kent Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 6 % of LONG REACH STW catchment is designated either AONB or National Park.	High

1.7. MOGDEN STW Catchment

SEA Topic	Commentary	Sensitivity assigned																
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 3 Internationally designated sites (SPA, SAC, Ramsar) South West London Waterbodies, RAMSAR site Richmond Park, (SAC) South West London Waterbodies, (SPA) Intersects 15 Nationally designated sites (SSSI and NNR) <table><tr><td>Bushy Park And Home Park, SSSI</td><td>Harrow Weald, SSSI</td></tr><tr><td>Ruislip Woods, SSSI</td><td>Richmond Park, SSSI</td></tr><tr><td>Harefield Pit, SSSI</td><td>Syon Park, SSSI</td></tr><tr><td>Old Park Wood, SSSI</td><td>Bentley Priory, SSSI</td></tr><tr><td>Mid Colne Valley, SSSI</td><td>Brent Reservoir, SSSI</td></tr><tr><td>Barn Elms Wetland Centre, SSSI</td><td>Staines Moor, SSSI</td></tr><tr><td>Wraysbury No. 1 Gravel Pit, SSSI</td><td>Ruislip Woods, NNR</td></tr><tr><td></td><td>Richmond Park, NNR</td></tr></table> Intersects 30 Locally designated sites (LNR) Denham Quarry Park (Mapped Boundary Not Stanmore Common, LNR Verified), LNR Stanmore Country Park, LNR	Bushy Park And Home Park, SSSI	Harrow Weald, SSSI	Ruislip Woods, SSSI	Richmond Park, SSSI	Harefield Pit, SSSI	Syon Park, SSSI	Old Park Wood, SSSI	Bentley Priory, SSSI	Mid Colne Valley, SSSI	Brent Reservoir, SSSI	Barn Elms Wetland Centre, SSSI	Staines Moor, SSSI	Wraysbury No. 1 Gravel Pit, SSSI	Ruislip Woods, NNR		Richmond Park, NNR	High
Bushy Park And Home Park, SSSI	Harrow Weald, SSSI																	
Ruislip Woods, SSSI	Richmond Park, SSSI																	
Harefield Pit, SSSI	Syon Park, SSSI																	
Old Park Wood, SSSI	Bentley Priory, SSSI																	
Mid Colne Valley, SSSI	Brent Reservoir, SSSI																	
Barn Elms Wetland Centre, SSSI	Staines Moor, SSSI																	
Wraysbury No. 1 Gravel Pit, SSSI	Ruislip Woods, NNR																	
	Richmond Park, NNR																	

	Oxhey Woods, LNR Brent Reservoir / Welsh Harp, LNR Yeading Meadows (Mapped Boundary Not Verified), LNR Yeading Brook Meadows (Mapped Boundary Not Verified), LNR Scratchwood And Moat Mount Open Spaces, LNR Fryent Country Park, LNR Litten Nature Reserve, LNR Hounslow Heath, LNR Oak Avenue Hampton, LNR Cranebank, LNR Pevensey Road, LNR Masons Field, LNR Kempton Nature Reserves, LNR Within 10km there are 10 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Lee Valley, RAMSAR site Richmond Park, (SAC) Windsor Forest & Great Park, (SAC) Wimbledon Common, (SAC) Within 2km there are 30 no. SSSI and/or NNR sites Bushy Park And Home Park, SSSI Ruislip Woods, SSSI Harefield Pit, SSSI Old Park Wood, SSSI Mid Colne Valley, SSSI Barn Elms Wetland Centre, SSSI Wraysbury No. 1 Gravel Pit, SSSI Harrow Weald, SSSI Richmond Park, SSSI Syon Park, SSSI Bentley Priory, SSSI Brent Reservoir, SSSI Staines Moor, SSSI Kempton Park Reservoirs, SSSI Wraysbury & Hythe End Gravel Pits, SSSI As a whole less than 1% of MOGDEN STW catchment, is designated either at an International, National or Local level. Intersects 2597 areas of Priority Habitat which makes up 1 % of the MOGDEN STW catchment area.	Long Wood, LNR Islip Manor, LNR Grove Farm, LNR Northolt Manor, LNR Blondin Nature Area, LNR Leg Of Mutton Reservoir, LNR Big Wood & Little Wood, LNR Arthur Jacob Nature Reserve, LNR Ham Common, Richmond, London, LNR Fox Wood, LNR Barnes Common, LNR Ruislip, LNR Bentley Priory, LNR Yeading Woods (Mapped Boundary Not Verified), LNR Thursley, Ash, Pirbright & Chobham, (SAC) Burnham Beeches, (SAC) South West London Waterbodies, (SPA) Thames Basin Heaths, (SPA) Lee Valley, (SPA) Wraysbury Reservoir, SSSI Fray'S Farm Meadows, SSSI Old Rectory Meadows, SSSI Thorpe Hay Meadow, SSSI Denham Lock Wood, SSSI Knight & Bessborough Reservoirs, SSSI Kingcup Meadows And Oldhouse Wood, SSSI Hampstead Heath Woods, SSSI Langham Pond, SSSI Dumsey Meadow, SSSI Windsor Forest And Great Park, SSSI Thorpe Park No. 1 Gravel Pit, SSSI Wimbledon Common, SSSI Ruislip Woods, NNR Richmond Park, NNR
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2260 areas currently utilised for recreation or which benefit the community. This includes 256 allotments, 213 religious grounds, 749 playing fields, 88 sports facility, 63 golf courses, 390 public parks and 67 cemeteries. Also within the catchment are 434 areas where vulnerable population groups would be expected. This includes 409 Schools and education centres, 25 hospitals, and 0 residential care homes. This is also reflected in the designation of 195 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MOGDEN STW catchment 97% is classified as urban.	High

Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 8 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 103 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Fray'S River, Watercourses Grand Union Canal, Watercourses Yeading Brook, Watercourses River Ash, Watercourses Duke Of Northumberland'S River, Watercourses Portlane Brook, Watercourses River Crane, Watercourses Longford River, Watercourses River Brent, Watercourses River Thames, Watercourses Dean'S Brook, Watercourses River Pinn, Watercourses Colne Brook, Watercourses River Colne, Watercourses County Ditch, Watercourses Wraysbury River, Watercourses Poyle Channel, Watercourses Dollis Brook, Watercourses Yeading Brook (Eastern Arm), Watercourses Wealdstone Brook, Watercourses Shire Ditch, Watercourses Edgware Brook, Watercourses River Misbourne, Watercourses Silk Stream, Watercourses Beverley Brook, Watercourses The Roxbourne, Watercourses Bigley Ditch, Watercourses River Pinn At Pinner, Flood Warning Areas River Colne At Willowbank, Flood Warning Areas River Thames At Hampton And Hampton Wick, Flood Warning Areas Properties Closest To The River Thames From Platts Eyot To Hampton Court Bridge, Flood Warning Areas Properties Closest To The River Thames At Sunbury, Flood Warning Areas River Brent In The London Borough Of Brent, Flood Warning Areas Tidal Thames From Richmond Bridge To Teddington Weir, Flood Warning Areas Tidal Thames From Putney Bridge To The Hogarth Lane Roundabout, Flood Warning Areas River Brent In The London Borough Of Barnet, Flood Warning Areas River Pinn At Ruislip, Flood Warning Areas Tidal Thames From The River Brent To The River Crane, Flood Warning Areas Edgware Brook At Stanmore, Flood Warning Areas Dollis Brook From Barnet To Hendon, Flood Warning Areas River Ash At Ashford And Staines, Flood Warning Areas Colne Brook At Colnbrook, Flood Warning Areas Tidal Thames From The Hogarth Lane Roundabout To The River Brent, Flood Warning Areas River Crane At Twickenham, Flood Warning Areas Yeading Brook East At South Ruislip, Flood Warning Areas Properties Closest To The River Thames At Wraysbury From Old Windsor Weir To Magna Carta Island, Flood Warning Areas Tidal River Crane At Isleworth, Flood Warning Areas Deans Brook At Edgware, Flood Warning Areas River Crane At Southall, Flood Warning Areas Beverley Brook At Barnes, Flood Warning Areas River Pinn At Ickenham, Flood Warning Areas Tidal River Brent At Brentford, Flood Warning Areas	High

River Pinn At Uxbridge, Flood Warning Areas
 River Misbourne At The Chalfonts, Flood Warning Areas
 River Pinn At Eastcote Village, Flood Warning Areas
 Yeading Brook At Hillingdon, Flood Warning Areas
 Tidal Thames From Mortlake High Street East To Richmond Bridge, Flood Warning Areas
 Tidal Thames From The River Crane To Teddington Weir, Flood Warning Areas
 Yeading Brook West At Ruislip Manor, Flood Warning Areas
 River Pinn At Yiewsley, Flood Warning Areas
 River Colne And Frays River At West Drayton And Stanwell Moor, Flood Warning Areas
 River Brent In The London Boroughs Of Ealing And Hounslow, Flood Warning Areas
 River Thames At Hamm Court, Flood Warning Areas
 River Thames At Shepperton And Lower Halliford, Flood Warning Areas
 Colne Brook At Iver, Flood Warning Areas
 Properties Closest To The River Thames From Littleton Lane, Shepperton Green To Shepperton Lock, Flood Warning Areas
 River Thames At Staines And Egham, Flood Warning Areas
 River Thames At Laleham, Flood Warning Areas
 River Thames At Horton, Flood Warning Areas
 River Thames At Kingston-Upon-Thames, Flood Warning Areas
 Tidal Thames At Chiswick, Flood Warning Areas
 Beverley Brook At Wimbledon Common And Richmond Park, Flood Warning Areas
 River Thames At Shepperton Green, Flood Warning Areas
 Woodridings Stream At Pinner Green, Flood Warning Areas
 River Thames At Trowlock Island, Flood Warning Areas
 Mutton Brook At Hampstead Garden Suburb, Flood Warning Areas
 Tidal Thames To The South Of Hammersmith Bridge, Flood Warning Areas
 Tidal Thames From Putney Bridge To Mortlake High Street East, Flood Warning Areas
 River Crane At Cranford And Feltham, Flood Warning Areas
 River Thames At Teddington, Flood Warning Areas
 Wealdstone Brook At Kenton, Flood Warning Areas
 River Thames At Sunbury, Flood Warning Areas
 Properties Closest To The River Thames From Runnymede Pleasure Grounds, Staines To Penton Hook, Flood Warning Areas
 River Thames At Wraysbury, Flood Warning Areas
 River Thames At East And West Molesey, Flood Warning Areas
 Properties Closest To The River Thames From Shepperton Lock To Beasley'S Ait, Flood Warning Areas
 Silk Stream At Edgware And Colindale, Flood Warning Areas
 River Thames From Datchet To Shepperton Green, Flood Alert Areas
 Tidal Thames In The Boroughs Of Kensington And Chelsea, Hammersmith And Fulham, Ealing And Hounslow, Flood Alert Areas
 Beverley Brook Area In Merton, Sutton, Kingston Upon Thames, Richmond Upon Thames And Wandsworth, Flood Alert Areas
 River Thames From Hampton And Thames Ditton To Teddington, Flood Alert Areas
 Tidal River Brent, Flood Alert Areas
 Yeading Brooks In London Boroughs Of Harrow And Hillingdon, Flood Alert Areas
 Tidal Thames Riverside From Putney Bridge To Teddington Weir, Flood Alert Areas
 River Pinn And Woodridings Stream, Flood Alert Areas
 Silk Stream And The Deans, Edgware, Dollis, Mutton And Wealdstone Brooks, Flood Alert Areas
 River Misbourne, Flood Alert Areas
 Tidal River Crane, Flood Alert Areas
 Colne Brook At Iver And Colnbrook, Flood Alert Areas
 River Ash In The Borough Of Spelthorne, Flood Alert Areas
 Fluvial River Crane, Flood Alert Areas
 River Thames From Shepperton To Molesey, Flood Alert Areas
 Tidal Thames In The Boroughs Of Wandsworth And Richmond-Upon-Thames, Flood Alert Areas
 River Thames At Trowlock Island, Flood Alert Areas
 Middle River Colne, Flood Alert Areas
 Lower River Colne And Frays River, Flood Alert Areas
 River Brent From Hendon To Brentford, Flood Alert Areas
 Of the total area of the catchment, 10 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.

Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 1, Soil grade 1 Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 94 % of MOGDEN STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	High
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 17 no. areas designated as Air Quality Management Area as follows: Barnet Aqma, AQMA Richmond Aqma, AQMA Brent Aqma, AQMA Slough Aqma No.2., AQMA South Bucks Aqma, AQMA Hertsmere Aqma No. 6, AQMA Kingston Upon Thames Aqma, AQMA South Bucks District Council Aqma No 2, AQMA Wandsworth Aqma, AQMA Harrow Aqma, AQMA Wraysbury/M25, AQMA Spelthorne Aqma, AQMA Hillingdon Aqma, AQMA Hammersmith And Fulham Aqma, AQMA Hounslow Aqma, AQMA Ealing Aqma, AQMA Camden Aqma, AQMA AQMA's constitute 88 % area of MOGDEN STW catchment. Intersects 30 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 381 no. sensitive receptors. This includes 360 Schools and education centres, 21 hospitals, and 0 residential care homes Intersects 1359 no areas utilised for recreation or which benefit the community. This includes 217 Allotments, 195 religious grounds, 459 playing fields, 50 sports facility, 48 golf course, 333 public park and 57 cemeteries Within 200 meters, there are 22 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) South West London Waterbodies, RAMSAR site Richmond Park, Special Area of Conservation (SAC) South West London Waterbodies, Special Protection Area (SPA) Ruislip Woods, NNR Richmond Park, NNR Bushy Park And Home Park, SSSI Ruislip Woods, SSSI Harefield Pit, SSSI Old Park Wood, SSSI Mid Colne Valley, SSSI Barn Elms Wetland Centre, SSSI Wraysbury No. 1 Gravel Pit, SSSI Harrow Weald, SSSI Richmond Park, SSSI Syon Park, SSSI Bentley Priory, SSSI Brent Reservoir, SSSI Staines Moor, SSSI Kempton Park Reservoirs, SSSI Wraysbury & Hythe End Gravel Pits, SSSI Wraysbury Reservoir, SSSI Fray'S Farm Meadows, SSSI Within 200 meters, there are 817 sensitive receptors (School and education centres, hospitals or residential care homes) Kew Riverside Primary School Strand On The Green Junior And Infant School Darell Primary And Nursery School Holy Trinity Church Of England Primary School The Queen'S Church Of England Primary School Sheen Mount Primary School Green Dragon Primary School St Paul'S Church Of England Primary School St Richard'S With Primary School St Andrew'S Church Of England Primary School Oriel Academy West London Meadlands Primary School Stanley Primary School St James'S Roman Catholic Primary School Garden Suburb Junior School Garden Suburb Infant School St Mary'S Hampton Church Of England Primary School Beauclerc Infant And Nurserv St Hugh'S Church St Mary West Twyford Church Church Of The Holy Family St Dunstan'S Church St Albans Church None, Playing fields King George'S Field, Playing fields Wades Lane Ground, Playing fields Deansbrook Playground Fairway Playground Alf Kings Play Ground	High

Our Lady And St John'S Roman Catholic Primary School	School	Wood End Recreation Ground
Grove Park Primary School	St John The Baptist Church Of England Junior School	Jubilee Park Playground
Westbrook Primary School	Wraysbury Primary School	Composers Park Play Area
Wellington Primary And Nursery School	Trafalgar Infants School	Pinemartin Activity Park
St Michael And St Martin Roman Catholic Primary School	Trafalgar Junior School	None, Sports facility
Wellington Primary School	Crane Park Primary School	Hounslow Indoor Bowls Club
Norwood Green Infant And Nursery School	Frith Manor Primary School	Indoor Bowling Green
Edison Primary School	Etz Chaim Jewish Primary School	Richmond Indoor Bowls Club
Norwood Green Junior School	St Vincent'S Roman Catholic Primary School	Hanworth Bowling Club
East Sheen Primary School	St Paul'S Church Of England Primary School Nw7	Hendon Golf Club
William Hogarth Primary School	Dollis Infants School	Pinner Hill Golf Club
Cavendish Primary School	Bell Lane Primary School	Uxbridge Golf Course
St Mary'S Roman Catholic Primary School	St Agnes Roman Catholic School	Northwood Golf Course
St Mary Magdalen'S Roman Catholic Primary School	Childs Hill Primary School	Haste Hill Golf Course
Thomson House School	All Saints' Church Of England School	Northolt Golf Club
Marlborough Primary School And Nursery	Claremont Primary School	Grims Dyke Golf Club
Botwell House Rc Primary School	Rimon Jewish Primary School	Ealing Golf Range
West Drayton Primary School	Dollis Junior School	Fulwell Golf Course
St Catherine Roman Catholic Primary School	Weald Rise Primary School	Twickenham Golf Course
Clifton Primary School	St Mary'S And St Peter'S Church Of England Primary School	None, Golf course
Featherstone Primary And Nursery School	Parkfield Primary School	Strawberry Hill Golf Club
Laurel Lane Primary School	Sunnyfields Primary School	Sudbrook Park, Golf course
St Martins Church Of England Primary School	St Mary'S And St John'S Church Of England Primary School	Royal Mid-Surrey Golf Club
Pinkwell Primary School	Belmont School	Finchley Golf Course
Cherry Lane Primary School	Highfield Primary School	Brent Valley Municipal Golf Course
Cranford Park Academy	St Josephs Roman Catholic Primary School	Stockley Park, Golf course
William Byrd Primary School	Edward Pauling Primary School	West Middlesex Golf Course
Heathrow Primary School	St Lawrence Roman Catholic Primary School	Ashford Manor Golf Club
Harmondsworth Primary School	Fairholme Primary School	Mill Hill Golf Club
Berkeley Primary School	Cardinal Road Infant And Nursery School	Mill Hill Golf Course
Beaconsfield Primary And Nursery School	Southville Junior School	Sudbury Golf Club
Blair Peach Primary School	St Robert Southwell Roman Catholic Primary School	Northwick Park, Golf course
Minet Nursery And Infant School	The Hyde School	Ruislip Golf Course

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 12 Communities at Risk Areas (flooding) Contains 115 Flood Warning Areas Contains 74 Flood Alert Areas			High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 1 World Heritage Sites Intersects 2529 Listed Buildings Intersects 33 areas designated as Scheduled Monuments Intersects 35 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 1 World Heritage Sites Royal Botanic Gardens, Kew, World heritage sites			High
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of MOGDEN STW catchment is designated either AONB or National Park.			Low

1.8. RIVERSIDE STW Catchment

SEA Topic	Commentary	Sensitivity assigned																				
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 3 Nationally designated sites (SSSI and NNR) Hornchurch Cutting, SSSI Inner Thames Marshes, SSSI Ingrebourne Marshes, SSSI Intersects 12 Locally designated sites (LNR) <table><tr><td>East Brookend Country Park, LNR</td><td>Chigwell Row Wood, LNR</td></tr><tr><td>The Manor, LNR</td><td>Cranham Marsh, LNR</td></tr><tr><td>Hainault Lodge, LNR</td><td>Ingrebourne Valley, LNR</td></tr><tr><td>Scrattons Ecopark Amd Extension, LNR</td><td>Rainham Marshes, LNR</td></tr><tr><td>Beam Valley, LNR</td><td>Dagenham Village Churchyard, LNR</td></tr><tr><td>The Chase, LNR</td><td>Hainault Forest, LNR</td></tr></table> Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites <table><tr><td>Lee Valley, RAMSAR site</td><td>Lee Valley, (SPA)</td></tr></table> Epping Forest, (SAC) Within 2km there are 6 no. SSSI and/or NNR sites <table><tr><td>Hornchurch Cutting, SSSI</td><td>Hainault Forest, SSSI</td></tr><tr><td>Inner Thames Marshes, SSSI</td><td>Curtismill Green, SSSI</td></tr><tr><td>Ingrebourne Marshes, SSSI</td><td>Purfleet Road, Aveley, SSSI</td></tr></table> As a whole less than 1% of RIVERSIDE STW catchment, is designated either at an International, National or Local level. Intersects 477 areas of Priority Habitat which makes up 1 % of the RIVERSIDE STW catchment area. Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 415 areas currently utilised for recreation or which benefit the community. This includes 43 allotments, 49 religious grounds, 116 playing fields, 14 sports facility, 14 golf courses, 67 public parks and 14 cemeteries. Also within the catchment are 98 areas where vulnerable population groups would be expected. This includes 95 Schools and education centres, 3 hospitals, and 0 residential care homes. This is also reflected in the designation of 21 no. Noise Important Areas within the catchment.	High																				
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of RIVERSIDE STW catchment 93% is classified as urban.	High																				
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2	Medium																				

	Intersects 0 Drinking Water Safeguard Zones Intersects 34 statutory rivers / unnamed water bodies. Water environment features intersected include: <table><tr><td>Ingrebourne River, Watercourses</td><td>River Rom At Romford, Flood Warning Areas</td></tr><tr><td>, Watercourses</td><td>River</td></tr><tr><td>River Rom, Watercourses</td><td>Beam At Dagenham, Flood Warning Areas</td></tr><tr><td>Black'S Brook, Watercourses</td><td>Tidal Thames From The Mardyke To Barking Creek, Flood Warning Areas</td></tr><tr><td>Beam River, Watercourses</td><td>River Rom At Collier Row, Flood Warning Areas</td></tr><tr><td>Rainham Creek, Watercourses</td><td>Lower River Roding, Flood Alert Areas</td></tr><tr><td>Wantz Stream, Watercourses</td><td>Tidal Thames Riverside From Dartford Creek And The Mardyke To The Thames Barrier, Flood Alert Areas</td></tr><tr><td>Paine'S Brook, Watercourses</td><td>Tidal Thames In The Boroughs Of Havering, Barking And Dagenham, And Newham, Flood Alert Areas</td></tr><tr><td>Common Watercourse, Watercourses</td><td>Rivers Beam And Rom, Flood Alert Areas</td></tr><tr><td>Carter'S Brook, Watercourses</td><td>River Ingrebourne At Harold Park And Hornchurch, Flood Alert Areas</td></tr><tr><td>The Gores, Watercourses</td><td></td></tr><tr><td>The Ravensbourne, Watercourses</td><td></td></tr><tr><td>Bourne Brook, Watercourses</td><td></td></tr><tr><td>River Ingrebourne At Hornchurch, Flood Warning Areas</td><td></td></tr><tr><td>River Ingrebourne At Harold Park, Flood Warning Areas</td><td></td></tr></table> Of the total area of the catchment, 11 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk. Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 5 Communities at Risk Areas (flooding) Contains 9 Flood Warning Areas Contains 5 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 130 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of RIVERSIDE STW catchment is designated either AONB or National Park.	Low

2. London Risk Zones

This section of the document presents all proformas for the London Risk Zones. These are environmental baseline proformas that cover the nine SEA topics. Also reported is the sensitivity assigned to the SEA topic based on the rules presented in Table 4-2 of the Main Report.

Note that not all risk zones have solutions proposed within them. They are, nevertheless, included here as they inform part of the environmental baseline gathering exercise.

Furthermore, GSOs listed in the Catchment Proformas are those briefed for the catchment. Significance of effect for each have therefore been generated and are presented in Appendix E. Please see Chapter 11 of the Environmental Report and Appendix E which highlights those GSOs promoted in the Final Plan.

2.1. BECKTON STW - CA(CAMDEN)

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Hampstead Heath Woods, Site of Special Scientific Interest Intersects 5 Locally designated sites (LNR) Adelaide, Local Nature Reserve Westbere Copse, Local Nature Reserve Camley Street Nature Park, Local Nature Reserve St John'S Wood Church Grounds, Local Nature Reserve Belsize Wood, Local Nature Reserve Within 10km there are 5 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Wimbledon Common, Special Area of Conservation (SAC) Richmond Park, Special Area of Conservation (SAC) Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 1 no. SSSI and/or NNR sites Hampstead Heath Woods, Site of Special Scientific Interest As a whole less than 1% of BECKTON STW - CA(CAMDEN) catchment, is designated either at an International, National or Local level. Intersects 1918 areas of Priority Habitat which makes up 13 % of the BECKTON STW - CA(CAMDEN) catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 664 areas currently utilised for recreation or which benefit the community. This includes 13 allotments, 32 religious grounds, 278 playing fields, 8 sports facility, 2 golf courses, 160 public parks and 11 cemeteries. Also within the catchment are 160 areas where vulnerable population groups would be expected. This includes 127 Schools and education centres, 33 hospitals, and 0 residential care homes. This is also reflected in the designation of 87 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of BECKTON STW - CA(CAMDEN) catchment 99% is classified as urban.	High

Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 3 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 32 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses The Westbourn, Watercourses River Thames, Watercourses Grand Union Canal, Watercourses The Fountains, Watercourses Tidal Thames From London Bridge To Hungerford Bridge, Flood Warning Areas Tidal Thames At Westminster, Flood Warning Areas Tidal Thames From Vauxhall Bridge To Battersea Bridge, Flood Warning Areas Tidal Thames From Blackfriars Bridge To Vauxhall Bridge, Flood Warning Areas Tidal Thames From Battersea Power Station To Battersea Bridge, Flood Warning Areas Tidal Thames From Hungerford Bridge To Battersea Power Station, Flood Warning Areas Tidal Thames Riverside From The Thames Barrier To Putney Bridge, Flood Alert Areas Tidal Thames In The Boroughs Of Tower Hamlets, City Of London, City Of Westminster, Ken And Chelsea, Flood Alert Areas Tidal Thames In The Boroughs Of Greenwich, Lewisham, Southwark, Lambeth And Wandsworth, Flood Alert Areas Of the total area of the catchment, 9 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 89 % of BECKTON STW - CA(CAMDEN) catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 9 no. areas designated as Air Quality Management Area as follows: Haringey Aqma, AQMA Camden Aqma, AQMA Westminster Aqma, AQMA Islington Aqma, AQMA Lambeth Aqma, AQMA Barnet Aqma, AQMA Brent Aqma, AQMA City Of London Aqma, AQMA Kensington And Chelsea Aqma, AQMA AQMAs constitute 100 % area of BECKTON STW - CA(CAMDEN) catchment. Intersects 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	High

	Intersects 121 no. sensitive receptors. This includes 92 Schools and education centres, 29 hospitals, and 0 residential care homes Intersects 358 no areas utilised for recreation or which benefit the community. This includes 10 Allotments, 26 religious grounds, 183 playing fields, 7 sports facility, 0 golf course, 127 public park and 5 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Hampstead Heath Woods, Site of Special Scientific Interest Within 200 meters, there are 243 sensitive receptors (School and education centres, hospitals or residential care homes) St Luke'S Church Of England Primary School St George The Martyr Church Of England Primary School Argyle Primary School King'S Cross Academy St Alban'S C Of E Primary And Nursery School Queen'S Park Primary School Our Lady Of Dolours Roman Catholic Primary School St Augustine'S C Of E Primary School Ark Atwood Primary Academy St Stephen'S Church Of England Primary School Essendine Primary School St Peter'S Church Of England School St Mary Of The Angels Roman Catholic Primary School Atwood Primary Academy Wilberforce Primary School Holy Trinity And St Silas C Of E Primary School St Paul'S Church Of England Primary School Primrose Hill Primary School George Eliot Primary School Robinsfield Infant School Netley Primary School Edith Neville Primary School St Aloysius Roman Catholic Infant School St Mary Magdalene Church Of England Primary School St Aloysius Roman Catholic Junior School Richard Cobden Primary School All Souls Church Of England Primary School Edward Wilson Primary School St James'S And St Michael'S Church Of England (Voluntary Aided) Primary School St George'S Hanover Square Church Of England Primary School St Peter'S Eaton Square Church Of England Primary School St Josephs Primary School St Clement Danes Church Of England Primary School St Gabriel'S Church Of England Primary School Churchill Gardens Primary School The Western Eye Hospital University College Hospital At Westmoreland Street St Mary'S Hospital The Princess Grace Hospital The Portland Hospital For Women And Children Capio Nightingale Hospital Hospital Of St John And St Elizabeth Queen Mary'S House, Hospitals The Royal Free Hospital The Wellington Hospital Whittington Hospital St Thomas' Hospital None, Allotments Adelaide Community Garden, Allotments London Central Mosque St Marks Church St Marylebone Church St Peter'S Church St John'S Church St Anne'S Church St Luke'S Church St Benet And All Saints' Church St Mark'S Church St Saviour'S Church St Dominic'S Priory, Religious grounds None, Religious grounds St Martin'S Church Westminster Abbey, Religious grounds St Cuthberts Parish Church St Augustine'S Church St Mary'S Church St Giles-In-The-Fields Church The Danish Church St Pancras Church Church Of Christ The King None, Playing fields Parliament Hill Playground Kilburn Grange Park Adventure Playground Coram'S Fields Playground The Diana Princess Of Wales Memorial Playground Adventure Play Area None, Sports facility Mansfield Bowling Club Hampstead Golf Club None, Public park Grosvenor Square Gardens, Public park

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 107 Communities at Risk Areas (flooding) Contains 6 Flood Warning Areas Contains 3 Flood Alert Areas	High	
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 1 World Heritage Sites Intersects 5908 Listed Buildings Intersects 5 areas designated as Scheduled Monuments Intersects 54 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 1 World Heritage Sites Palace Of Westminster, Westminster Abbey And St. Margaret'S Church, World heritage sites	High	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in	Low	

	addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of BECKTON STW - CA(CAMDEN) catchment is designated either AONB or National Park.	

2.2. BECKTON STW - HK(HACKNEY)

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Hampstead Heath Woods, Site of Special Scientific Interest Intersects 6 Locally designated sites (LNR) Parkland Walk, Local Nature Reserve Abney Park Cemetery, Local Nature Reserve Alexandra Palace & Park, Local Nature Reserve Queen'S Wood, Local Nature Reserve Railway Fields, Local Nature Reserve Springfield Park, Local Nature Reserve Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 3 no. SSSI and/or NNR sites Hampstead Heath Woods, Site of Special Scientific Interest Walthamstow Reservoirs, Site of Special Scientific Interest Walthamstow Marshes, Site of Special Scientific Interest As a whole 3% of BECKTON STW - HK(HACKNEY) catchment, is designated either at an International, National or Local level. Intersects 684 areas of Priority Habitat which makes up 6 % of the BECKTON STW - HK(HACKNEY) catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 672 areas currently utilised for recreation or which benefit the community. This includes 36 allotments, 33 religious grounds, 322 playing fields, 11 sports facility, 2 golf courses, 114 public parks and 10 cemeteries.	High

	Also within the catchment are 144 areas where vulnerable population groups would be expected. This includes 137 Schools and education centres, 7 hospitals, and 0 residential care homes. This is also reflected in the designation of 64 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of BECKTON STW - HK(HACKNEY) catchment 95% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 5 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 12 statutory rivers / unnamed water bodies. Water environment features intersected include: The Moselle, Watercourses River Lea Or Lee, Watercourses New River, Watercourses Grand Union Canal, Watercourses Coppermill Stream, Watercourses Lower River Lee At Stratford, Flood Warning Areas Lower River Lee At Enfield, Flood Warning Areas Lower River Lee At Hackney And Walthamstow, Flood Warning Areas Pymmes Brook At Upper Edmonton And Tottenham, Flood Warning Areas Tidal Thames At Mill Meads And East Plaistow, Flood Warning Areas Lower Lee Tributaries, Flood Alert Areas Lower River Lee From Hoddesdon To Canning Town, Flood Alert Areas Tidal Thames In The Boroughs Of Havering, Barking And Dagenham, And Newham, Flood Alert Areas Of the total area of the catchment, 6 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 96 % of BECKTON STW - HK(HACKNEY) catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 9 no. areas designated as Air Quality Management Area as follows: Hackney Aqma, AQMA Haringey Aqma, AQMA Camden Aqma, AQMA Islington Aqma, AQMA Tower Hamlets Aqma, AQMA	High

	Barnet Aqma, AQMA Waltham Forest Aqma, AQMA City Of London Aqma, AQMA Newham Aqma, AQMA AQMAs constitute 100 % area of BECKTON STW - HK(HACKNEY) catchment. Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 98 no. sensitive receptors. This includes 95 Schools and education centres, 3 hospitals, and 0 residential care homes Intersects 360 no areas utilised for recreation or which benefit the community. This includes 22 Allotments, 23 religious grounds, 220 playing fields, 6 sports facility, 1 golf course, 81 public park and 7 cemeteries Within 200 meters, there are 5 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Lee Valley, RAMSAR site Lee Valley, Special Protection Area (SPA) Hampstead Heath Woods, Site of Special Scientific Interest Walthamstow Reservoirs, Site of Special Scientific Interest Walthamstow Marshes, Site of Special Scientific Interest Within 200 meters, there are 214 sensitive receptors (School and education centres, hospitals or residential care homes) Sebright School Southwold Primary School Simon Marks Jewish Primary School Jubilee Primary School Harrington Hill Primary School Tyssen Community School And Children'S Centre Northwold Primary School Shacklewell Primary School Princess May Primary School St Matthias Ce Primary School Mossbourne Riverside Academy St Scholastica'S Roman Catholic Primary School Benthal Primary School South Haringay Junior School South Haringay Infants School Highgate Primary School St Michael'S Church Of England Primary School Tetherdown Primary School St James'S Church Of England Primary School Muswell Hill Primary School Gainsborough Primary School Rushmore Infants School Rushmore Primary School Millfields Community School Nightingale Primary School Baden-Powell School Mandeville Primary School Grasmere Primary School North Haringay Primary School Betty Layward Primary School Brook Community Primary School St John And St James Church Of England Primary School Morningside Primary School Berger Primary School St Dominic'S Catholic Primary School Mowlem Primary School Our Lady Of Muswell Roman Catholic Primary School St Jude And St Paul'S Church Of England Primary School Welbourne Primary School St Joseph'S Roman Catholic Primary School St Luke'S Primary School Belmont Junior School St Paul'S Roman Catholic Primary School St Jude'S And St Paul'S Church Of England Primary School Annexe Columbia Primary School Highgate Private Hospital Homerton University Hospital St Ann'S Hospital Moorfields Eye Hospital Mildmay Mission Hospital Whittington Hospital None, Allotments Shepherd'S Hill Allotments St Luke'S Church Woodberry Down Baptist Church St Ann'S Church Community Church Of God St Mark'S Church St Leonard'S Church All Saints Church St Saviour'S Priory, Religious grounds St Michael And All Angels' Church St Bartholomew'S Church Cathedral Church Of The Good Shepherd St Mary'S Church St Mary'S Old Church Christ Church All Saints' Church None, Religious grounds St Andrew'S Church

There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 709 areas currently utilised for recreation or which benefit the community. This includes 43 allotments, 48 religious grounds, 290 playing fields, 22 sports facility, 0 golf courses, 121 public parks and 23 cemeteries. Also within the catchment are 162 areas where vulnerable population groups would be expected. This includes 150 Schools and education centres, 12 hospitals, and 0 residential care homes. This is also reflected in the designation of 102 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of BECKTON STW - KC(KENSINGTON AN catchment 98% is classified as urban.	High

Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 16 statutory rivers / unnamed water bodies. Water environment features intersected include: River Brent, Watercourses River Thames, Watercourses Beverley Brook, Watercourses Wealdstone Brook, Watercourses , Watercourses Silk Stream, Watercourses Grand Union Canal, Watercourses Tidal Thames At Chiswick, Flood Warning Areas Tidal Thames From Battersea Bridge To Putney Bridge, Flood Warning Areas Tidal Thames At North Fulham, Flood Warning Areas Tidal Thames At South Fulham, Flood Warning Areas Tidal Thames From Battersea Power Station To Battersea Bridge, Flood Warning Areas Tidal Thames From Battersea Bridge To Wandsworth Bridge, Flood Warning Areas River Brent In The London Borough Of Brent, Flood Warning Areas Tidal Thames From Vauxhall Bridge To Battersea Bridge, Flood Warning Areas Tidal Thames At Hammersmith And West Kensington, Flood Warning Areas Tidal Thames From Putney Bridge To The Hogarth Lane Roundabout, Flood Warning Areas Wealdstone Brook At Kenton, Flood Warning Areas Tidal Thames To The South Of Hammersmith Bridge, Flood Warning Areas Tidal Thames From Putney Bridge To Mortlake High Street East, Flood Warning Areas Tidal Thames To The North Of Hammersmith Bridge, Flood Warning Areas Tidal Thames From Wandsworth Bridge To Putney Bridge, Flood Warning Areas Tidal Thames In The Boroughs Of Wandsworth And Richmond-Upon-Thames, Flood Alert Areas River Brent From Hendon To Brentford, Flood Alert Areas Tidal Thames Riverside From The Thames Barrier To Putney Bridge, Flood Alert Areas Silk Stream And The Deans, Edgware, Dollis, Mutton And Wealdstone Brooks, Flood Alert Areas Tidal Thames In The Boroughs Of Tower Hamlets, City Of London, City Of Westminster, Ken And Chelsea, Flood Alert Areas Tidal Thames Riverside From Putney Bridge To Teddington Weir, Flood Alert Areas Tidal Thames In The Boroughs Of Greenwich, Lewisham, Southwark, Lambeth And Wandsworth, Flood Alert Areas Tidal Thames In The Boroughs Of Kensington And Chelsea, Hammersmith And Fulham, Ealing And Hounslow, Flood Alert Areas Of the total area of the catchment, 22 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 99 % of BECKTON STW - KC(KENSINGTON AN catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel	High

	and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 9 no. areas designated as Air Quality Management Area as follows: <table><tr><td>Camden Aqma, AQMA</td><td>Kensington And Chelsea Aqma, AQMA</td></tr><tr><td>Westminster Aqma, AQMA</td><td>Barnet Aqma, AQMA</td></tr><tr><td>Hounslow Aqma, AQMA</td><td>Brent Aqma, AQMA</td></tr><tr><td>Hammersmith And Fulham Aqma, AQMA</td><td>Richmond Aqma, AQMA</td></tr><tr><td>Ealing Aqma, AQMA</td><td></td></tr></table>	Camden Aqma, AQMA	Kensington And Chelsea Aqma, AQMA	Westminster Aqma, AQMA	Barnet Aqma, AQMA	Hounslow Aqma, AQMA	Brent Aqma, AQMA	Hammersmith And Fulham Aqma, AQMA	Richmond Aqma, AQMA	Ealing Aqma, AQMA

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter,	High

	drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 7 Communities at Risk Areas (flooding) Contains 23 Flood Warning Areas Contains 36 Flood Alert Areas	
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 1873 Listed Buildings Intersects 5 areas designated as Scheduled Monuments Intersects 40 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of BECKTON STW - KC(KENSINGTON AN catchment is designated either AONB or National Park.	Low

2.5. BECKTON STW - NW(NEWHAM)

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 3 Internationally designated sites (SPA, SAC, Ramsar) Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Intersects 4 Nationally designated sites (SSSI and NNR) Epping Forest, Site of Special Scientific Interest Walthamstow Reservoirs, Site of Special Scientific Interest Chingford Reservoirs, Site of Special Scientific Interest Walthamstow Marshes, Site of Special Scientific Interest Intersects 4 Locally designated sites (LNR) Ackroyd Drive, Local Nature Reserve Tower Hamlets Cemetery Park, Local Nature Reserve Ainslie Wood, Local Nature Reserve Mudchute Park Farm, Local Nature Reserve Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites	High

	Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 5 no. SSSI and/or NNR sites Epping Forest, Site of Special Scientific Interest Walthamstow Reservoirs, Site of Special Scientific Interest Chingford Reservoirs, Site of Special Scientific Interest Walthamstow Marshes, Site of Special Scientific Interest Gilbert'S Pit (Charlton), Site of Special Scientific Interest As a whole 6% of BECKTON STW - NW(NEWHAM) catchment, is designated either at an International, National or Local level. Intersects 1514 areas of Priority Habitat which makes up 7 % of the BECKTON STW - NW(NEWHAM) catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1198 areas currently utilised for recreation or which benefit the community. This includes 63 allotments, 57 religious grounds, 541 playing fields, 24 sports facility, 10 golf courses, 224 public parks and 25 cemeteries. Also within the catchment are 254 areas where vulnerable population groups would be expected. This includes 243 Schools and education centres, 11 hospitals, and 0 residential care homes. This is also reflected in the designation of 95 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of BECKTON STW - NW(NEWHAM) catchment 80% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 16 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 57 statutory rivers / unnamed water bodies. Water environment features intersected include: River Lea Or Lee, Watercourses , Watercourses Waterworks River, Watercourses Coppermill Stream, Watercourses Cuckoo Brook, Watercourses River Lee Navigation, Watercourses River Thames, Watercourses Prescott Channel, Watercourses Channelsea River, Watercourses Bow Creek, Watercourses Three Mills Wall River, Watercourses Deptford Creek, Watercourses River Roding, Watercourses The Ching, Watercourses	High

	Grand Union Canal, Watercourses Alders Brook, Watercourses Tidal Thames From Deptford Creek To Rotherhithe Station, Flood Warning Areas Tidal Thames At Beckton, Flood Warning Areas Tidal Thames At Mill Meads And East Plaistow, Flood Warning Areas Tidal Thames At The Isle Of Dogs North Of South Dock, Flood Warning Areas Tidal Thames At Beckton Sewage Works, Flood Warning Areas Tidal Thames From Thamesmead To Woolwich Arsenal, Flood Warning Areas Tidal Thames From Woolwich Arsenal To Deptford Creek, Flood Warning Areas Ching Brook In The London Borough Of Waltham Forest, Flood Warning Areas Tidal Thames From Rotherhithe Station To London Bridge, Flood Warning Areas Lower River Lee At Hackney And Walthamstow, Flood Warning Areas Lower River Lee At Enfield, Flood Warning Areas Tidal Thames From The Limehouse Basin To Blackfriars Bridge, Flood Warning Areas Lower River Lee From West Ham And Canning Town, Flood Warning Areas Lower River Lee At Stratford, Flood Warning Areas Tidal Thames From The Mardyke To Barking Creek, Flood Warning Areas Tidal Thames At The Isle Of Dogs South Of South Dock, Flood Warning Areas River Roding In Redbridge, Flood Warning Areas River Roding In Barking, Flood Warning Areas Pymmes Brook At Upper Edmonton And Tottenham, Flood Warning Areas Tidal Thames From Beckton Sewage Works To The River Lee, Flood Warning Areas Tidal Thames Riverside From The Thames Barrier To Putney Bridge, Flood Alert Areas Lower Lee Tributaries, Flood Alert Areas Tidal Thames Riverside From Dartford Creek And The Mardyke To The Thames Barrier, Flood Alert Areas Tidal Thames In The Boroughs Of Havering, Barking And Dagenham, And Newham, Flood Alert Areas Tidal Thames In The Boroughs Of Bexley And Greenwich, Flood Alert Areas Lower River Roding, Flood Alert Areas Groundwater Flooding In South East London, Flood Alert Areas Tidal Thames In The Boroughs Of Tower Hamlets, City Of London, City Of Westminster, Ken And Chelsea, Flood Alert Areas Tidal Thames In The Boroughs Of Greenwich, Lewisham, Southwark, Lambeth And Wandsworth, Flood Alert Areas Lower River Lee From Hoddesdon To Canning Town, Flood Alert Areas Of the total area of the catchment, 34 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 88 % of BECKTON STW - NW(NEWHAM) catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows:		High

	Intersects 8 Communities at Risk Areas (flooding) Contains 26 Flood Warning Areas Contains 52 Flood Alert Areas	
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 2 World Heritage Sites Intersects 1155 Listed Buildings Intersects 11 areas designated as Scheduled Monuments Intersects 9 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 2 World Heritage Sites Tower Of London, World heritage sites Maritime Greenwich, World heritage sites	High
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of BECKTON STW - NW(NEWHAM) catchment is designated either AONB or National Park.	Low

2.6. BECKTON STW - RD(REDBRIDGE)

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 1 Internationally designated sites (SPA, SAC, Ramsar) Epping Forest, Special Area of Conservation (SAC) Intersects 3 Nationally designated sites (SSSI and NNR) Hainault Forest, Site of Special Scientific Interest Epping Forest, Site of Special Scientific Interest Roding Valley Meadows, Site of Special Scientific Interest Intersects 9 Locally designated sites (LNR) Hainault Forest, Local Nature Reserve Ripple, Local Nature Reserve Parsloe'S Park Squatts, Local Nature Reserve Roding Valley Meadows, Local Nature Reserve Chigwell Row Wood, Local Nature Reserve Home Mead, Local Nature Reserve Hainault Lodge, Local Nature Reserve	High

	Linders Field, Local Nature Reserve Mayesbrook Park, South, Local Nature Reserve Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 3 no. SSSI and/or NNR sites Hainault Forest, Site of Special Scientific Interest Epping Forest, Site of Special Scientific Interest Roding Valley Meadows, Site of Special Scientific Interest As a whole 7% of BECKTON STW - RD(REDBRIDGE) catchment, is designated either at an International, National or Local level. Intersects 1555 areas of Priority Habitat which makes up 12 % of the BECKTON STW - RD(REDBRIDGE) catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 550 areas currently utilised for recreation or which benefit the community. This includes 56 allotments, 56 religious grounds, 169 playing fields, 24 sports facility, 12 golf courses, 87 public parks and 20 cemeteries. Also within the catchment are 126 areas where vulnerable population groups would be expected. This includes 118 Schools and education centres, 8 hospitals, and 0 residential care homes. This is also reflected in the designation of 41 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of BECKTON STW - RD(REDBRIDGE) catchment 59% is classified as urban.	Medium
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 7 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 76 statutory rivers / unnamed water bodies. Water environment features intersected include: The Ching, Watercourses , Watercourses Chigwell Brook, Watercourses River Roding, Watercourses Cran Brook, Watercourses Mayes Brook, Watercourses River Thames, Watercourses Cuckoo Brook, Watercourses The Lake, Watercourses Alders Brook, Watercourses Loughton Brook, Watercourses Spurgate Brook, Watercourses	Medium

	Seven Kings Water, Watercourses Loxford Water, Watercourses River Roding At Abridge, Flood Warning Areas Tidal Thames At Beckton Sewage Works, Flood Warning Areas Tidal Thames From Thamesmead To Woolwich Arsenal, Flood Warning Areas Tidal Thames From Erith High Street To Thamesmead, Flood Warning Areas Tidal Thames From The Mardyke To Barking Creek, Flood Warning Areas Ching Brook In The London Borough Of Waltham Forest, Flood Warning Areas River Roding In Barking, Flood Warning Areas River Roding At Loughton, Flood Warning Areas River Roding In Redbridge, Flood Warning Areas Lower Lee Tributaries, Flood Alert Areas Tidal Thames Riverside From Dartford Creek And The Mardyke To The Thames Barrier, Flood Alert Areas Tidal Thames In The Boroughs Of Havering, Barking And Dagenham, And Newham, Flood Alert Areas Tidal Thames In The Boroughs Of Bexley And Greenwich, Flood Alert Areas Lower River Roding, Flood Alert Areas Middle River Roding, Flood Alert Areas Of the total area of the catchment, 12 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 82 % of BECKTON STW - RD(REDBRIDGE) catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 6 no. areas designated as Air Quality Management Area as follows: Bexley Aqma, AQMA Havering Aqma, AQMA Waltham Forest Aqma, AQMA Redbridge Aqma, AQMA Barking And Dagenham Aqma, AQMA Newham Aqma, AQMA AQMAs constitute 65 % area of BECKTON STW - RD(REDBRIDGE) catchment. Intersects 35 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 107 no. sensitive receptors. This includes 99 Schools and education centres, 8 hospitals, and 0 residential care homes Intersects 355 no areas utilised for recreation or which benefit the community. This includes 47 Allotments, 48 religious grounds, 134 playing fields, 22 sports facility, 12 golf course, 74 public park and 18 cemeteries Within 200 meters, there are 4 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Epping Forest, Special Area of Conservation (SAC) Hainault Forest, Site of Special Scientific Interest	High

Epping Forest, Site of Special Scientific Interest		
Roding Valley Meadows, Site of Special Scientific Interest		
Within 200 meters, there are 222 sensitive receptors (School and education centres, hospitals or residential care homes)		
Grove Primary School	Mossford Green Primary School	Roman Catholic Church Of St Teresa

SEA Topic	Commentary	Sensitivity assigned

Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 3 Nationally designated sites (SSSI and NNR) Oxleas Woodlands, Site of Special Scientific Interest Abbey Wood, Site of Special Scientific Interest Gilbert'S Pit (Charlton), Site of Special Scientific Interest Intersects 5 Locally designated sites (LNR) Oxleas Wood, Local Nature Reserve Crossness, Local Nature Reserve Lesnes Abbey Woods, Local Nature Reserve Sutcliffe Park, Local Nature Reserve Maryon Wilson Park & Gilbert'S Pit, Local Nature Reserve Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 5 no. SSSI and/or NNR sites Oxleas Woodlands, Site of Special Scientific Interest Abbey Wood, Site of Special Scientific Interest Gilbert'S Pit (Charlton), Site of Special Scientific Interest Inner Thames Marshes, Site of Special Scientific Interest Elmstead Pit, Site of Special Scientific Interest As a whole 4% of CROSSNESS STW GR(GREENWICH) catchment, is designated either at an International, National or Local level. Intersects 1552 areas of Priority Habitat which makes up 12 % of the CROSSNESS STW GR(GREENWICH) catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 547 areas currently utilised for recreation or which benefit the community. This includes 39 allotments, 43 religious grounds, 193 playing fields, 12 sports facility, 7 golf courses, 121 public parks and 11 cemeteries. Also within the catchment are 121 areas where vulnerable population groups would be expected. This includes 116 Schools and education centres, 5 hospitals, and 0 residential care homes. This is also reflected in the designation of 28 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of CROSSNESS STW GR(GREENWICH) catchment 87% is classified as urban.	High

Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 41 statutory rivers / unnamed water bodies. Water environment features intersected include: Quaggy River, Watercourses , Watercourses River Thames, Watercourses Ravensbourne River, Watercourses Deptford Creek, Watercourses River Roding, Watercourses River Shuttle, Watercourses Tidal Thames At Beckton Sewage Works, Flood Warning Areas River Quaggy At Chinbrook, Mottingham And Eltham, Flood Warning Areas Tidal Thames From The Mardyke To Barking Creek, Flood Warning Areas Tidal Thames From Woolwich Arsenal To Deptford Creek, Flood Warning Areas Tidal Thames At The Isle Of Dogs South Of South Dock, Flood Warning Areas Tidal Thames From Thamesmead To Woolwich Arsenal, Flood Warning Areas Ravensbourne At Lewisham, Flood Warning Areas Tidal Thames From Erith High Street To Thamesmead, Flood Warning Areas River Quaggy At Kidbrooke, Lee And Hither Green, Flood Warning Areas Ravensbourne At Deptford, Flood Warning Areas Tidal Thames From Deptford Creek To Rotherhithe Station, Flood Warning Areas Tidal Thames From Beckton Sewage Works To The River Lee, Flood Warning Areas Tidal Thames At The Isle Of Dogs North Of South Dock, Flood Warning Areas Tidal Thames Riverside From Dartford Creek And The Mardyke To The Thames Barrier, Flood Alert Areas Tidal Thames In The Boroughs Of Greenwich, Lewisham, Southwark, Lambeth And Wandsworth, Flood Alert Areas Ravensbourne Area In The London Boroughs Of Lewisham, Bromley, Greenwich And Croydon, Flood Alert Areas Tidal Thames In The Boroughs Of Tower Hamlets, City Of London, City Of Westminster, Ken And Chelsea, Flood Alert Areas Tidal Thames In The Boroughs Of Havering, Barking And Dagenham, And Newham, Flood Alert Areas Tidal Thames In The Boroughs Of Bexley And Greenwich, Flood Alert Areas Tidal Thames Riverside From The Thames Barrier To Putney Bridge, Flood Alert Areas Groundwater Flooding In South East London, Flood Alert Areas Of the total area of the catchment, 35 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 87 % of CROSSNESS STW GR(GREENWICH) catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on	High

	consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 6 no. areas designated as Air Quality Management Area as follows: Barking And Dagenham Aqma, AQMA Bexley Aqma, AQMA Tower Hamlets Aqma, AQMA Lewisham Aqma, AQMA Newham Aqma, AQMA Greenwich Aqma, AQMA AQMAs constitute 95 % area of CROSSNESS STW GR(GREENWICH) catchment. Intersects 6 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 89 no. sensitive receptors. This includes 85 Schools and education centres, 4 hospitals, and 0 residential care homes Intersects 318 no areas utilised for recreation or which benefit the community. This includes 29 Allotments, 31 religious grounds, 141 playing fields, 9 sports facility, 6 golf course, 95 public park and 7 cemeteries Within 200 meters, there are 3 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Oxleas Woodlands, Site of Special Scientific Interest Abbey Wood, Site of Special Scientific Interest Gilbert'S Pit (Charlton), Site of Special Scientific Interest Within 200 meters, there are 190 sensitive receptors (School and education centres, hospitals or residential care homes) <table><tr><td>James Wolfe Primary School And Centre For The Deaf</td><td>Memorial Hospital</td></tr><tr><td>Kidbrooke Park Primary School</td><td>Queen Elizabeth Hospital</td></tr><tr><td>Woodhill Primary School</td><td>Goldie Leigh Hospital</td></tr><tr><td>Cardwell Primary School</td><td>Eltham Community Hospital</td></tr><tr><td>Morden Mount Primary School</td><td>Blackheath Hospital/40 - 42</td></tr><tr><td>Middle Park Primary School</td><td>None, Allotments</td></tr><tr><td>Horn Park Primary School</td><td>Benefice Of Charlton St Thomas'S Church</td></tr><tr><td>Cherry Orchard Primary School</td><td>St George'S Garrison Church</td></tr><tr><td>St Alfege With St Peter'S Church Of England Primary School</td><td>Woolwich Evangelical Church</td></tr><tr><td>Windrush Primary School</td><td>Holy Trinity Church</td></tr><tr><td>St Margaret'S Church Of England Primary School</td><td>None, Religious grounds</td></tr><tr><td>Brooklands Primary School</td><td>William Temple Church</td></tr><tr><td>Waterside Primary School</td><td>St Alban'S Church</td></tr><tr><td>South Rise Primary School</td><td>St John The Baptist'S Church</td></tr><tr><td>Heronsgate Primary School</td><td>Eltham United Reformed Church</td></tr><tr><td>Thorntree Primary School</td><td>Eltham Park, Religious grounds</td></tr><tr><td>Conway Primary School</td><td>Christchurch Roman Catholic Church</td></tr><tr><td>Discovery Primary School</td><td>Christ Church</td></tr><tr><td>Bannockburn Primary School</td><td>St John Fisher And St Thomas More Roman Catholic Church</td></tr><tr><td>Gallions Mount Primary School</td><td>St Barnabas Church</td></tr><tr><td>Our Lady Of Grace Roman Catholic School</td><td>Abbey Wood Methodist Church</td></tr><tr><td>Fossdene Primary School</td><td>St Michael'S Church</td></tr><tr><td>Our Lady Of Grace Catholic Primary School</td><td>Woolwich Central Baptist Church</td></tr><tr><td>St Patrick'S Catholic Primary School</td><td>St Nicholas' Church</td></tr><tr><td>Foxfield Primary School</td><td>The Roman Catholic Church Of The Holy Cross</td></tr><tr><td>Christ Church Church Of England Primary School</td><td>St Augustine'S Church</td></tr><tr><td>Invicta Primay School</td><td>All Saint'S Church</td></tr><tr><td>Eastcote Primary School</td><td>Wesley Hall Methodist Church</td></tr><tr><td>Deansfield Primary School</td><td>St Alfege Church</td></tr><tr><td>St Thomas More Roman Catholic Primary School</td><td>St Michael And All Angels' Church</td></tr><tr><td></td><td>St Nicholas Church</td></tr><tr><td></td><td>St George'S Church</td></tr></table>	James Wolfe Primary School And Centre For The Deaf	Memorial Hospital	Kidbrooke Park Primary School	Queen Elizabeth Hospital	Woodhill Primary School	Goldie Leigh Hospital	Cardwell Primary School	Eltham Community Hospital	Morden Mount Primary School	Blackheath Hospital/40 - 42	Middle Park Primary School	None, Allotments	Horn Park Primary School	Benefice Of Charlton St Thomas'S Church	Cherry Orchard Primary School	St George'S Garrison Church	St Alfege With St Peter'S Church Of England Primary School	Woolwich Evangelical Church	Windrush Primary School	Holy Trinity Church	St Margaret'S Church Of England Primary School	None, Religious grounds	Brooklands Primary School	William Temple Church	Waterside Primary School	St Alban'S Church	South Rise Primary School	St John The Baptist'S Church	Heronsgate Primary School	Eltham United Reformed Church	Thorntree Primary School	Eltham Park, Religious grounds	Conway Primary School	Christchurch Roman Catholic Church	Discovery Primary School	Christ Church	Bannockburn Primary School	St John Fisher And St Thomas More Roman Catholic Church	Gallions Mount Primary School	St Barnabas Church	Our Lady Of Grace Roman Catholic School	Abbey Wood Methodist Church	Fossdene Primary School	St Michael'S Church	Our Lady Of Grace Catholic Primary School	Woolwich Central Baptist Church	St Patrick'S Catholic Primary School	St Nicholas' Church	Foxfield Primary School	The Roman Catholic Church Of The Holy Cross	Christ Church Church Of England Primary School	St Augustine'S Church	Invicta Primay School	All Saint'S Church	Eastcote Primary School	Wesley Hall Methodist Church	Deansfield Primary School	St Alfege Church	St Thomas More Roman Catholic Primary School	St Michael And All Angels' Church		St Nicholas Church		St George'S Church

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 107 Communities at Risk Areas (flooding) Contains 8 Flood Warning Areas Contains 6 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 944 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 9 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 1 World Heritage Sites Palace Of Westminster, Westminster Abbey And St. Margaret'S Church, World heritage sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of CROSSNESS STW LB(LAMBETH) catchment is designated either AONB or National Park.	Low

2.13. CROSSNESS STW LW(LEWISHAM)

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 6 Locally designated sites (LNR)	Medium

	Brookmill Road, Local Nature Reserve Beckenham Place Park, Local Nature Reserve Downham Woodland Walk, Local Nature Reserve Burnt Ash Pond, Local Nature Reserve Sue Godfrey Nature Park, Local Nature Reserve Dacres Wood, Local Nature Reserve Within 10km there are 4 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Wimbledon Common, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 1 no. SSSI and/or NNR sites Elmstead Pit, Site of Special Scientific Interest As a whole 2% of CROSSNESS STW LW(LEWISHAM) catchment, is designated either at an International, National or Local level. Intersects 608 areas of Priority Habitat which makes up 5 % of the CROSSNESS STW LW(LEWISHAM) catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 554 areas currently utilised for recreation or which benefit the community. This includes 65 allotments, 42 religious grounds, 198 playing fields, 17 sports facility, 5 golf courses, 109 public parks and 10 cemeteries. Also within the catchment are 108 areas where vulnerable population groups would be expected. This includes 106 Schools and education centres, 2 hospitals, and 0 residential care homes. This is also reflected in the designation of 45 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of CROSSNESS STW LW(LEWISHAM) catchment 100% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 2 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 16 statutory rivers / unnamed water bodies. Water environment features intersected include: Ravensbourne River, Watercourses , Watercourses Deptford Creek, Watercourses River Thames, Watercourses Quaggy River, Watercourses Pool River, Watercourses The Beck, Watercourses Chaffinch Brook, Watercourses Tidal Thames At Deptford And Southwark Park, Flood Warning Areas	Medium

	Ravensbourne At Bromley, Flood Warning Areas Ravensbourne At Lewisham, Flood Warning Areas Tidal Thames From Deptford Creek To Rotherhithe Station, Flood Warning Areas Chaffinch Brook And St James Stream At Elmers End, Flood Warning Areas River Quaggy At Kidbrooke, Lee And Hither Green, Flood Warning Areas Pool River At Bell Green And New Beckenham, Flood Warning Areas Beck At Beckenham, Flood Warning Areas Properties Around Chinbrook Meadows, Flood Warning Areas River Quaggy At Chinbrook, Mottingham And Eltham, Flood Warning Areas Ravensbourne At Deptford, Flood Warning Areas Tidal Thames At South Bermondsey, Flood Warning Areas Ravensbourne From Bellingham To Catford, Flood Warning Areas Tidal Thames From Woolwich Arsenal To Deptford Creek, Flood Warning Areas Tidal Thames At The Isle Of Dogs South Of South Dock, Flood Warning Areas Tidal Thames In The Boroughs Of Tower Hamlets, City Of London, City Of Westminster, Ken And Chelsea, Flood Alert Areas Ravensbourne Area In The London Boroughs Of Lewisham, Bromley, Greenwich And Croydon, Flood Alert Areas Groundwater Flooding In South East London, Flood Alert Areas Tidal Thames In The Boroughs Of Bexley And Greenwich, Flood Alert Areas Tidal Thames In The Boroughs Of Greenwich, Lewisham, Southwark, Lambeth And Wandsworth, Flood Alert Areas Tidal Thames Riverside From The Thames Barrier To Putney Bridge, Flood Alert Areas Of the total area of the catchment, 15 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 96 % of CROSSNESS STW LW(LEWISHAM) catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 7 no. areas designated as Air Quality Management Area as follows: Greenwich Aqma, AQMA Crofton Park And Honor Oak Park Air Quality Management Area, AQMA Lewisham Aqma, AQMA Southwark Aqma, AQMA Tower Hamlets Aqma, AQMA Croydon Aqma, AQMA Bromley Aqma, AQMA AQMAs constitute 59 % area of CROSSNESS STW LW(LEWISHAM) catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 80 no. sensitive receptors. This includes 78 Schools and education centres, 2 hospitals, and 0 residential care homes Intersects 330 no areas utilised for recreation or which benefit the community. This includes 50 Allotments, 31 religious grounds, 144 playing fields, 11 sports facility, 2 golf course, 86 public park and 6 cemeteries	Medium

Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)		
Within 200 meters, there are 195 sensitive receptors (School and education centres, hospitals or residential care homes)

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 107 Communities at Risk Areas (flooding) Contains 18 Flood Warning Areas Contains 8 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 282 Listed Buildings Intersects 4 areas designated as Scheduled Monuments Intersects 4 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of CROSSNESS STW MR(MERTON) catchment is designated either AONB or National Park.	Low

2.15. CROSSNESS STW SW(SOUTHWARK)

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 7 Locally designated sites (LNR) Stave Hill Ecology Park, Local Nature Reserve Russia Dock Woodland, Local Nature Reserve Sydenham Hill Wood And Fern Bank, Local Nature Reserve Nunhead Cemetery, Local Nature Reserve One Tree Hill, Local Nature Reserve	Medium

	Lavender Pond, Local Nature Reserve Dulwich Upper Wood, Local Nature Reserve Within 10km there are 4 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Wimbledon Common, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 0 no. SSSI and/or NNR sites As a whole 2% of CROSSNESS STW SW(SOUTHWARK) catchment, is designated either at an International, National or Local level. Intersects 524 areas of Priority Habitat which makes up 5 % of the CROSSNESS STW SW(SOUTHWARK) catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 709 areas currently utilised for recreation or which benefit the community. This includes 27 allotments, 36 religious grounds, 346 playing fields, 9 sports facility, 1 golf courses, 148 public parks and 13 cemeteries. Also within the catchment are 129 areas where vulnerable population groups would be expected. This includes 116 Schools and education centres, 13 hospitals, and 0 residential care homes. This is also reflected in the designation of 45 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of CROSSNESS STW SW(SOUTHWARK) catchment 97% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 2 statutory rivers / unnamed water bodies. Water environment features intersected include: River Thames, Watercourses Tidal Thames From Hungerford Bridge To Battersea Power Station, Flood Warning Areas Tidal Thames From Rotherhithe Station To London Bridge, Flood Warning Areas Tidal Thames At Deptford And Southwark Park, Flood Warning Areas Tidal Thames At Walworth, Flood Warning Areas Tidal Thames At Camberwell, Flood Warning Areas Tidal Thames At The Isle Of Dogs North Of South Dock, Flood Warning Areas Tidal Thames From The Limehouse Basin To Blackfriars Bridge, Flood Warning Areas Tidal Thames At South Bermondsey, Flood Warning Areas Tidal Thames From London Bridge To Hungerford Bridge, Flood Warning Areas Tidal Thames At The Isle Of Dogs South Of South Dock, Flood Warning Areas Tidal Thames From Deptford Creek To Rotherhithe Station, Flood Warning Areas	Medium

	Tidal Thames Riverside From The Thames Barrier To Putney Bridge, Flood Alert Areas Groundwater Flooding In South East London, Flood Alert Areas Tidal Thames In The Boroughs Of Tower Hamlets, City Of London, City Of Westminster, Ken And Chelsea, Flood Alert Areas Tidal Thames In The Boroughs Of Greenwich, Lewisham, Southwark, Lambeth And Wandsworth, Flood Alert Areas Of the total area of the catchment, 48 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.																											
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 95 % of CROSSNESS STW SW(SOUTHWARK) catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low																										
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 6 no. areas designated as Air Quality Management Area as follows: Crofton Park And Honor Oak Park Air Quality Management Area, AQMA Bromley Aqma, AQMA Lambeth Aqma, AQMA Lewisham Aqma, AQMA Southwark Aqma, AQMA Tower Hamlets Aqma, AQMA AQMAs constitute 91 % area of CROSSNESS STW SW(SOUTHWARK) catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 91 no. sensitive receptors. This includes 79 Schools and education centres, 12 hospitals, and 0 residential care homes Intersects 392 no areas utilised for recreation or which benefit the community. This includes 18 Allotments, 26 religious grounds, 242 playing fields, 7 sports facility, 1 golf course, 88 public park and 10 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 206 sensitive receptors (School and education centres, hospitals or residential care homes) <table><tr><td>Boutcher Church Of England Primary School</td><td>None, Religious grounds</td></tr><tr><td>Victory Primary School</td><td>St Barnabas Church</td></tr><tr><td>Townsend Primary School</td><td>St Clement'S Church</td></tr><tr><td>English Martyrs Catholic Primary School</td><td>St Peter'S Church</td></tr><tr><td>English Martyrs Roman Catholic Primary School</td><td>St John'S Church</td></tr><tr><td>Crampton Primary School</td><td>St Margaret Clitherow'S Church</td></tr><tr><td>Surrey Square Primary School</td><td>St Paul'S Church</td></tr><tr><td>Robert Browning Primary School</td><td>St Antony With St Silas Church</td></tr><tr><td>St Peter'S Church Of England Primary School</td><td>St Giles Church</td></tr><tr><td>Keyworth Primary School</td><td>All Hallows' Church</td></tr><tr><td>St John'S Walworth Church Of England Primary School</td><td>The Cathedral And Collegiate Church Of St Saviour And St Mary Overie, Southwark</td></tr><tr><td></td><td>St George Of England Church Of England Church</td></tr><tr><td></td><td>The Church Of The Lord</td></tr></table>	Boutcher Church Of England Primary School	None, Religious grounds	Victory Primary School	St Barnabas Church	Townsend Primary School	St Clement'S Church	English Martyrs Catholic Primary School	St Peter'S Church	English Martyrs Roman Catholic Primary School	St John'S Church	Crampton Primary School	St Margaret Clitherow'S Church	Surrey Square Primary School	St Paul'S Church	Robert Browning Primary School	St Antony With St Silas Church	St Peter'S Church Of England Primary School	St Giles Church	Keyworth Primary School	All Hallows' Church	St John'S Walworth Church Of England Primary School	The Cathedral And Collegiate Church Of St Saviour And St Mary Overie, Southwark		St George Of England Church Of England Church		The Church Of The Lord	Medium

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 3 Internationally designated sites (SPA, SAC, Ramsar) Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Intersects 6 Nationally designated sites (SSSI and NNR) Epping Forest, SSSI Cornmill Stream And Old River Lea, SSSI Northaw Great Wood, SSSI Chingford Reservoirs, SSSI	High

	Hampstead Heath Woods, SSSI Turnford & Cheshunt Pits, SSSI Intersects 9 Locally designated sites (LNR) Ainslie Wood, LNR Alexandra Palace & Park, LNR Big Wood & Little Wood, LNR Railway Fields, LNR Coppetts Wood And Glebelands, LNR Coldfall Wood, LNR Cheshunt Park, LNR Northaw Great Wood Country Park, LNR Oak Hill Wood, LNR Within 10km there are 4 no. SPAs, SACs and/or Ramsar sites Lee Valley, RAMSAR site Epping Forest, Special Area of Conservation (SAC) Wormley-Hoddesdonpark Woods, Special Area of Conservation (SAC) Lee Valley, Special Protection Area (SPA) Within 2km there are 12 no. SSSI and/or NNR sites Epping Forest, SSSI Cornmill Stream And Old River Lea, SSSI Northaw Great Wood, SSSI Chingford Reservoirs, SSSI Hampstead Heath Woods, SSSI Turnford & Cheshunt Pits, SSSI Walthamstow Reservoirs, SSSI Waltham Abbey, SSSI Wormley-Hoddesdonpark Wood South, SSSI Walthamstow Marshes, SSSI Wormley-Hoddesdonpark Woods North, SSSI Broxbourne Woods, NNR As a whole less than 1% of DEEPHAMS STW catchment, is designated either at an International, National or Local level. Intersects 2075 areas of Priority Habitat which makes up 3 % of the DEEPHAMS STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1131 areas currently utilised for recreation or which benefit the community. This includes 140 allotments, 88 religious grounds, 320 playing fields, 53 sports facility, 35 golf courses, 227 public parks and 32 cemeteries. Also within the catchment are 236 areas where vulnerable population groups would be expected. This includes 225 Schools and education centres, 11 hospitals, and 0 residential care homes. This is also reflected in the designation of 97 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of DEEPHAMS STW catchment 91% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 16 areas of Source Protections Zones 1 and 2 Intersects 5 Drinking Water Safeguard Zones Intersects 95 statutory rivers / unnamed water bodies. Water environment features intersected include:	High

	Small River Lea Or Lee, Watercourses , Watercourses The Moselle, Watercourses Pymme'S Brook, Watercourses River Lea Or Lee, Watercourses Dollis Brook, Watercourses Grimes Brook, Watercourses Salmon'S Brook, Watercourses Turkey Brook, Watercourses Turnford Brook, Watercourses Cobbin'S Brook, Watercourses The Ching, Watercourses Rags Brook, Watercourses Theobalds Brook, Watercourses College Brook, Watercourses Merryhills Brook, Watercourses Bounds Green Brook, Watercourses Hempshill Brook, Watercourses Northaw Brook, Watercourses Cuffley Brook, Watercourses Houndsden Gutter, Watercourses New River, Watercourses Monken Mead Brook, Watercourses Trinity Marsh Ditch, Watercourses Old River Lea Or Lee, Watercourses Cornmill Stream, Watercourses Shirebourne, Watercourses Folly Brook, Watercourses Leeging Beech Gutter, Watercourses Pymmes Brook At East Barnet, Flood Warning Areas Turkey Brook At Enfield, Flood Warning Areas Of the total area of the catchment, 9 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Small River Lee At Cheshunt, Flood Warning Areas Rags Brook At Flamstead End, Flood Warning Areas Pymmes Brook At Upper Edmonton And Tottenham, Flood Warning Areas Lower River Lee At Hoddesdon And Cheshunt, Flood Warning Areas Lower River Lee At Hackney And Walthamstow, Flood Warning Areas Lower River Lee At Enfield, Flood Warning Areas Pymmes Brook From Bowes Park To Edmonton, Flood Warning Areas Cobbins Brook At Waltham Abbey, Flood Warning Areas Ching Brook In The London Borough Of Waltham Forest, Flood Warning Areas Salmons Brook At Grange Park And Lower Edmonton, Flood Warning Areas Dollis Brook From Barnet To Hendon, Flood Warning Areas Trinity Marsh Ditch At Waltham Cross, Flood Warning Areas Mutton Brook At Hampstead Garden Suburb, Flood Warning Areas Lower Lee Tributaries, Flood Alert Areas Silk Stream And The Deans, Edgware, Dollis, Mutton And Wealdstone Brooks, Flood Alert Areas Lower River Lee From Hoddesdon To Canning Town, Flood Alert Areas										
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 96 % of DEEPHAMS STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium										
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 12 no. areas designated as Air Quality Management Area as follows: <table><tr><td>Hackney Aqma, AQMA</td><td>Barnet Aqma, AQMA</td></tr><tr><td>Aqma No.4 Eleanor Cross Road / Monarchs Way, AQMA</td><td>Aqma 7 High Road In Wormley (A1170), AQMA</td></tr><tr><td>Extension To Aqma 1, AQMA</td><td>Waltham Forest Aqma, AQMA</td></tr><tr><td>Monarchs Way / Winston Churchill Way, AQMA</td><td>Camden Aqma, AQMA</td></tr><tr><td>Redbridge Aqma, AQMA</td><td></td></tr></table>	Hackney Aqma, AQMA	Barnet Aqma, AQMA	Aqma No.4 Eleanor Cross Road / Monarchs Way, AQMA	Aqma 7 High Road In Wormley (A1170), AQMA	Extension To Aqma 1, AQMA	Waltham Forest Aqma, AQMA	Monarchs Way / Winston Churchill Way, AQMA	Camden Aqma, AQMA	Redbridge Aqma, AQMA		High
Hackney Aqma, AQMA	Barnet Aqma, AQMA											
Aqma No.4 Eleanor Cross Road / Monarchs Way, AQMA	Aqma 7 High Road In Wormley (A1170), AQMA											
Extension To Aqma 1, AQMA	Waltham Forest Aqma, AQMA											
Monarchs Way / Winston Churchill Way, AQMA	Camden Aqma, AQMA											
Redbridge Aqma, AQMA												

Aqma 6 Great Cambridge Road (A10), AQMA		Haringey Aqma, AQMA Enfield Aqma, AQMA
AQMA's constitute 83 % area of DEEPHAMS STW catchment.		
Intersects 47 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)		
Intersects 216 no. sensitive receptors. This includes 206 Schools and education centres, 10 hospitals, and 0 residential care homes		
Intersects 738 no areas utilised for recreation or which benefit the community. This includes 117 Allotments, 81 religious grounds, 238 playing fields, 44 sports facility, 28 golf course, 207 public park and 23 cemeteries		
Within 200 meters, there are 11 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)		
Lee Valley, RAMSAR site	Northaw Great Wood, SSSI	
Epping Forest, Special Area of Conservation (SAC)	Chingford Reservoirs, SSSI	
Lee Valley, Special Protection Area (SPA)	Hampstead Heath Woods, SSSI	
Epping Forest, SSSI	Turnford & Cheshunt Pits, SSSI	
Cornmill Stream And Old River Lea, SSSI	Walthamstow Reservoirs, SSSI	
	Waltham Abbey, SSSI	
Within 200 meters, there are 437 sensitive receptors (School and education centres, hospitals or residential care homes)		
St Francis De Sales Roman Catholic Infant School	Millbrook School	None, Playing fields
Bounds Green Junior And Infants Schools	Dewhurst St Mary Church Of England Primary School	Grovelands Park Play Area, Playing fields
Hollickwood School	Andrew'S Lane Primary And Nursery School	Oakleigh Grove Play Area, Playing fields

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 10 Communities at Risk Areas (flooding) Contains 42 Flood Warning Areas Contains 60 Flood Alert Areas		High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 852 Listed Buildings Intersects 13 areas designated as Scheduled Monuments Intersects 10 areas designated as Registered parks and gardens Intersects 1 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites		High
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of DEEPHAMS STW catchment is designated either AONB or National Park.		Low

Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, less than 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 93 % of HOGSMILL STW RZ02 catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 2 no. areas designated as Air Quality Management Area as follows: Kingston Upon Thames Aqma, AQMA Richmond Aqma, AQMA AQMAs constitute 100 % area of HOGSMILL STW RZ02 catchment. Intersects 3 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 4 no. sensitive receptors. This includes 4 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 13 no areas utilised for recreation or which benefit the community. This includes 2 Allotments, 1 religious grounds, 4 playing fields, 0 sports facility, 4 golf course, 2 public park and 0 cemeteries Within 200 meters, there are 3 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Richmond Park, Special Area of Conservation (SAC) Richmond Park, National Nature Reserve Richmond Park, Site of Special Scientific Interest Within 200 meters, there are 14 sensitive receptors (School and education centres, hospitals or residential care homes) King'S Oak Primary School, Schools and Education centres Corpus Christi Roman Catholic Primary School, Schools and Education centres Coombe Hill Infants School, Schools and Education centres Coombe Hill Junior School, Schools and Education centres Christ Church New Malden Primary School, Schools and Education centres Kingston Hospital, Hospitals None, Allotments Christ Church, Religious grounds None, Playing fields None, Sports facility Coombe Wood Golf Course, Golf course Malden Golf Course, Golf course Coombe Hill Golf Course, Golf course Richmond Park, Public park	High

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 107 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 11 Listed Buildings Intersects 4 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of HOGSMILL STW RZ02 catchment is designated either AONB or National Park.	Low

2.20. HOGSMILL STW RZ03

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Banstead Downs, Site of Special Scientific Interest Intersects 7 Locally designated sites (LNR) Belmont Pastures, Local Nature Reserve Elmbridge Open Space, Local Nature Reserve Devonshire Avenue Nature Area, Local Nature Reserve Raeburn Open Space, Local Nature Reserve Rose Walk, Local Nature Reserve Morden Park, Local Nature Reserve Cuddington Meadows, Local Nature Reserve Within 10km there are 5 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Mole Gap To Reigate Escarpment, Special Area of Conservation (SAC) Richmond Park, Special Area of Conservation (SAC) Wimbledon Common, Special Area of Conservation (SAC) South West London Waterbodies, Special Protection Area (SPA)	High

	Within 2km there are 4 no. SSSI and/or NNR sites Banstead Downs, Site of Special Scientific Interest Mole Gap To Reigate Escarpment, Site of Special Scientific Interest Chipstead Downs, Site of Special Scientific Interest Stones Road Pond, Site of Special Scientific Interest As a whole less than 1% of HOGSMILL STW RZ03 catchment, is designated either at an International, National or Local level. Intersects 282 areas of Priority Habitat which makes up less than 1 % of the HOGSMILL STW RZ03 catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 232 areas currently utilised for recreation or which benefit the community. This includes 35 allotments, 20 religious grounds, 63 playing fields, 14 sports facility, 13 golf courses, 29 public parks and 8 cemeteries. Also within the catchment are 50 areas where vulnerable population groups would be expected. This includes 44 Schools and education centres, 6 hospitals, and 0 residential care homes. This is also reflected in the designation of 14 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of HOGSMILL STW RZ03 catchment 99% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 2 areas of Source Protections Zones 1 and 2 Intersects 6 Drinking Water Safeguard Zones Intersects 2 statutory rivers / unnamed water bodies. Water environment features intersected include: Pyl Brook, Watercourses , Watercourses Pyl Brook At North Cheam, Flood Warning Areas Surbiton Stream At Kingston, Flood Warning Areas East Pyl Brook At Morden Park, Flood Warning Areas River Hogsmill At Ewell Court, Ruxley And Old Malden, Flood Warning Areas Beverley Brook At Worcester Park, Flood Warning Areas River Hogsmill Area From Ewell To Kingston Upon Thames, Flood Alert Areas Groundwater Flooding In South East London, Flood Alert Areas Beverley Brook Area In Merton, Sutton, Kingston Upon Thames, Richmond Upon Thames And Wandsworth, Flood Alert Areas Of the total area of the catchment, 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	High
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and	Medium

	operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 95 % of HOGSMILL STW RZ03 catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.

Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 541 areas currently utilised for recreation or which benefit the community. This includes 67 allotments, 56 religious grounds, 168 playing fields, 19 sports facility, 10 golf courses, 94 public parks and 22 cemeteries. Also within the catchment are 105 areas where vulnerable population groups would be expected. This includes 97 Schools and education centres, 8 hospitals, and 0 residential care homes. This is also reflected in the designation of 49 no. Noise Important Areas within the catchment.	High																		
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of LONG REACH STW RZ CENTRAL catchment 50% is classified as urban.	Medium																		
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 19 areas of Source Protections Zones 1 and 2 Intersects 7 Drinking Water Safeguard Zones Intersects 93 statutory rivers / unnamed water bodies. Water environment features intersected include: River Cray, Watercourses , Watercourses Stanham River, Watercourses River Darent, Watercourses Wyncham Stream, Watercourses River Shuttle, Watercourses	High																		

	River Thames, Watercourses Beam River, Watercourses Mar Dyke, Watercourses River Darent From Otford To Darenth, Flood Warning Areas Properties Seaward Side Of Tidal Defences From Greenhithe To Gravesend, Flood Warning Areas River Cray In St Marys Cray, Sidcup, Bexley And Crayford, Flood Warning Areas Dartford, Crayford And Greenhithe, Flood Warning Areas Tidal Thames From Dartford Creek To Erith High Street East, Flood Warning Areas Tidal Thames From The Mardyke To Barking Creek, Flood Warning Areas Tidal Thames From Erith High Street To Thamesmead, Flood Warning Areas River Shuttle At Blackfen, Sidcup, Old Bexley And Crayford, Flood Warning Areas Gravesend And Northfleet, Flood Warning Areas River Darent At Dartford Trade Park, Brooklands And Dartford To The Thames Estuary, Flood Warning Areas Shuttle And Cray, Flood Alert Areas Tidal Thames In The Boroughs Of Bexley And Greenwich, Flood Alert Areas Tidal Thames In The Boroughs Of Havering, Barking And Dagenham, And Newham, Flood Alert Areas Tidal Thames Riverside From Dartford Creek And The Mardyke To The Thames Barrier, Flood Alert Areas River Darent From Westerham To Dartford, Flood Alert Areas Groundwater Flooding In South East London, Flood Alert Areas Coast From Dartford To Allhallows, Flood Alert Areas Of the total area of the catchment, 17 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.											
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 83 % of LONG REACH STW RZ CENTRAL catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium										
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 10 no. areas designated as Air Quality Management Area as follows: <table><tr><td>Barking And Dagenham Aqma, AQMA</td><td>Northfleet Industrial Area Aqma, AQMA</td></tr><tr><td>Dartford Aqma No.4, AQMA</td><td>Dartford Aqma No.1, AQMA</td></tr><tr><td>Dartford Aqma No.3, AQMA</td><td>Bexley Aqma, AQMA</td></tr><tr><td>Gravesham A2 Aqma, AQMA</td><td>Dartford Aqma No.2, AQMA</td></tr><tr><td>Aqma No.2 (M25), AQMA</td><td>Greenwich Aqma, AQMA</td></tr></table> AQMAs constitute 44 % area of LONG REACH STW RZ CENTRAL catchment. Intersects 21 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 93 no. sensitive receptors. This includes 85 Schools and education centres, 8 hospitals, and 0 residential care homes Intersects 365 no areas utilised for recreation or which benefit the community. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 7 Nationally designated sites (SSSI and NNR) Saltbox Hill, SSSI Elmstead Pit, SSSI Lullingstone Park, SSSI Keston And Hayes Commons, SSSI Downe Bank And High Elms, SSSI Crofton Woods, SSSI Ruxley Gravel Pits, SSSI Intersects 8 Locally designated sites (LNR) Jubilee Country Park, Local Nature Reserve Scadbury Park, Local Nature Reserve High Elms Country Park, Local Nature Reserve South Norwood Country Park, Local Nature Reserve Beckenham Place Park, Local Nature Reserve Hutchinson'S Bank, Local Nature Reserve Selsdon Wood, Local Nature Reserve Bramley Bank, Local Nature Reserve Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Wimbledon Common, Special Area of Conservation (SAC) Within 2km there are 11 no. SSSI and/or NNR sites Saltbox Hill, SSSI Elmstead Pit, SSSI Lullingstone Park, SSSI Keston And Hayes Commons, SSSI Ruxley Gravel Pits, SSSI Riddlesdown, SSSI Croham Hurst, SSSI	High

	Downe Bank And High Elms, SSSI Westerham Wood, SSSI Crofton Woods, SSSI Titsey Woods, SSSI As a whole 3% of LONG REACH STW RZ WEST catchment, is designated either at an International, National or Local level. Intersects 3938 areas of Priority Habitat which makes up 17 % of the LONG REACH STW RZ WEST catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 691 areas currently utilised for recreation or which benefit the community. This includes 77 allotments, 83 religious grounds, 148 playing fields, 33 sports facility, 34 golf courses, 163 public parks and 18 cemeteries. Also within the catchment are 135 areas where vulnerable population groups would be expected. This includes 126 Schools and education centres, 9 hospitals, and 0 residential care homes. This is also reflected in the designation of 49 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of LONG REACH STW RZ WEST catchment 52% is classified as urban.	Medium
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 5 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 57 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Ravens Bourne, Watercourses The Beck, Watercourses Quaggy River, Watercourses Kyd Brook, Watercourses River Cray, Watercourses Ravensbourne River, Watercourses Pool River, Watercourses Chaffinch Brook, Watercourses Pool River At Bell Green And New Beckenham, Flood Warning Areas Kyd Brook At Petts Wood, Flood Warning Areas Ravensbourne From Bellingham To Catford, Flood Warning Areas Beck At Beckenham, Flood Warning Areas Properties Around Chinbrook Meadows, Flood Warning Areas River Quaggy At Chinbrook, Mottingham And Eltham, Flood Warning Areas River Cray In St Marys Cray, Sidcup, Bexley And Crayford, Flood Warning Areas Kyd Brook At Sundridge Park, Flood Warning Areas Chaffinch Brook And St James Stream At Elmers End, Flood Warning Areas Ravensbourne At Bromley, Flood Warning Areas Ravensbourne Area In The London Boroughs Of Lewisham, Bromley, Greenwich And Croydon, Flood Alert Areas	High

	Shuttle And Cray, Flood Alert Areas Groundwater Flooding In South East London, Flood Alert Areas Of the total area of the catchment, 3 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.																			
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 95 % of LONG REACH STW RZ WEST catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium																		
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 6 no. areas designated as Air Quality Management Area as follows: Aqma No.4 (A20(T)), AQMA Bromley Aqma, AQMA Greenwich Aqma, AQMA Bexley Aqma, AQMA Aqma No.2 (M25), AQMA Croydon Aqma, AQMA AQMA's constitute 25 % area of LONG REACH STW RZ WEST catchment. Intersects 15 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 111 no. sensitive receptors. This includes 103 Schools and education centres, 8 hospitals, and 0 residential care homes Intersects 460 no areas utilised for recreation or which benefit the community. This includes 62 Allotments, 72 religious grounds, 109 playing fields, 28 sports facility, 31 golf course, 143 public park and 15 cemeteries Within 200 meters, there are 7 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Saltbox Hill, SSSI Elmstead Pit, SSSI Lullingstone Park, SSSI Keston And Hayes Commons, SSSI Downe Bank And High Elms, SSSI Crofton Woods, SSSI Ruxley Gravel Pits, SSSI Within 200 meters, there are 262 sensitive receptors (School and education centres, hospitals or residential care homes) <table><tr><td>Perry Hall School</td><td>Rosary Catholic Church</td></tr><tr><td>Crofton Infant School</td><td>St Mark'S Church</td></tr><tr><td>Crofton Junior School</td><td>New Addington Baptist Church</td></tr><tr><td>Mead Road Infants School</td><td>St Edward'S Church</td></tr><tr><td>Chislehurst (St Nicholas) Church Of</td><td>All Saints' Church</td></tr><tr><td>England (Aided) Primary School</td><td>Christ Church</td></tr><tr><td>Valley Primary School</td><td>St Francis Church</td></tr><tr><td>Poverest Primary School</td><td>St Peter And St Paul Church</td></tr><tr><td>Clare House Primary School</td><td>St Margaret'S Church</td></tr></table>	Perry Hall School	Rosary Catholic Church	Crofton Infant School	St Mark'S Church	Crofton Junior School	New Addington Baptist Church	Mead Road Infants School	St Edward'S Church	Chislehurst (St Nicholas) Church Of	All Saints' Church	England (Aided) Primary School	Christ Church	Valley Primary School	St Francis Church	Poverest Primary School	St Peter And St Paul Church	Clare House Primary School	St Margaret'S Church	High

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 121 Communities at Risk Areas (flooding) Contains 17 Flood Warning Areas Contains 11 Flood Alert Areas		High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 470 Listed Buildings Intersects 11 areas designated as Scheduled Monuments Intersects 8 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites		Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Kent Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 5 % of LONG REACH STW RZ WEST catchment is designated either AONB or National Park.		High

Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 365 areas currently utilised for recreation or which benefit the community. This includes 57 allotments, 37 religious grounds, 111 playing fields, 15 sports facility, 17 golf courses, 46 public parks and 12 cemeteries. Also within the catchment are 70 areas where vulnerable population groups would be expected. This includes 66 Schools and education centres, 4 hospitals, and 0 residential care homes. This is also reflected in the designation of 15 no. Noise Important Areas within the catchment.	High												
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MOGDEN STW NORTH catchment 70% is classified as urban.	High												
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 6 areas of Source Protections Zones 1 and 2 Intersects 3 Drinking Water Safeguard Zones Intersects 50 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Yeading Brook, Watercourses Yeading Brook (Eastern Arm), Watercourses The Roxbourne, Watercourses Fray'S River, Watercourses River Colne, Watercourses River Pinn, Watercourses Grand Union Canal, Watercourses River Pinn At Ickenham, Flood Warning Areas Yeading Brook East At South Ruislip, Flood Warning Areas Yeading Brook At Hillingdon, Flood Warning Areas River Pinn At Eastcote Village, Flood Warning Areas River Pinn At Uxbridge, Flood Warning Areas	High												

	Yeading Brook West At Ruislip Manor, Flood Warning Areas Woodridings Stream At Pinner Green, Flood Warning Areas River Pinn At Ruislip, Flood Warning Areas River Colne At Willowbank, Flood Warning Areas River Pinn At Pinner, Flood Warning Areas Lower River Colne And Frays River, Flood Alert Areas Fluvial River Crane, Flood Alert Areas Middle River Colne, Flood Alert Areas River Pinn And Woodridings Stream, Flood Alert Areas Yeading Brooks In London Boroughs Of Harrow And Hillingdon, Flood Alert Areas Of the total area of the catchment, 9 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 1, Soil grade 1 Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 81 % of MOGDEN STW NORTH catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	High
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 3 no. areas designated as Air Quality Management Area as follows: Hillingdon Aqma, AQMA Ealing Aqma, AQMA Harrow Aqma, AQMA AQMAs constitute 48 % area of MOGDEN STW NORTH catchment. Intersects 14 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 55 no. sensitive receptors. This includes 51 Schools and education centres, 4 hospitals, and 0 residential care homes Intersects 236 no areas utilised for recreation or which benefit the community. This includes 50 Allotments, 26 religious grounds, 88 playing fields, 13 sports facility, 16 golf course, 36 public park and 7 cemeteries Within 200 meters, there are 8 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Ruislip Woods, National Nature Reserve Ruislip Woods, SSSI Denham Lock Wood, SSSI Fray'S Farm Meadows, SSSI Mid Colne Valley, SSSI Old Park Wood, SSSI Harefield Pit, SSSI Harrow Weald, SSSI Within 200 meters, there are 143 sensitive receptors (School and education centres, hospitals or residential care homes) Cedars Manor School Welldon Park Primary School Glebe Primary School St John The Baptist'S Church Church Of St Alban Rayners Lane Baptist Church	High

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 110 Communities at Risk Areas (flooding) Contains 12 Flood Warning Areas Contains 14 Flood Alert Areas		High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 336 Listed Buildings Intersects 18 areas designated as Scheduled Monuments Intersects 4 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites		Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of MOGDEN STW NORTH catchment is designated either AONB or National Park.		Low

2.27. MOGDEN STW- Weald

Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar)	High

	Intersects 2 Nationally designated sites (SSSI and NNR) Bentley Priory, Site of Special Scientific Interest Harrow Weald, Site of Special Scientific Interest Intersects 5 Locally designated sites (LNR) Bentley Priory, Local Nature Reserve Fryent Country Park, Local Nature Reserve Masons Field, Local Nature Reserve Stanmore Country Park, Local Nature Reserve Stanmore Common, Local Nature Reserve Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 3 no. SSSI and/or NNR sites Bentley Priory, Site of Special Scientific Interest Harrow Weald, Site of Special Scientific Interest Brent Reservoir, Site of Special Scientific Interest As a whole 5% of MOGDEN STW- Weald catchment, is designated either at an International, National or Local level. Intersects 724 areas of Priority Habitat which makes up 9 % of the MOGDEN STW- Weald catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 237 areas currently utilised for recreation or which benefit the community. This includes 28 allotments, 30 religious grounds, 58 playing fields, 12 sports facility, 7 golf courses, 33 public parks and 8 cemeteries. Also within the catchment are 61 areas where vulnerable population groups would be expected. This includes 54 Schools and education centres, 7 hospitals, and 0 residential care homes. This is also reflected in the designation of 25 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MOGDEN STW- Weald catchment 87% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 17 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Wealdstone Brook, Watercourses Edgware Brook, Watercourses River Brent, Watercourses Wealdstone Brook At Kenton, Flood Warning Areas Edgware Brook At Stanmore, Flood Warning Areas River Brent In The London Borough Of Brent, Flood Warning Areas	Medium

	Silk Stream At Edgware And Colindale, Flood Warning Areas River Brent From Hendon To Brentford, Flood Alert Areas Silk Stream And The Deans, Edgware, Dollis, Mutton And Wealdstone Brooks, Flood Alert Areas Of the total area of the catchment, 3 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 107 Communities at Risk Areas (flooding) Contains 25 Flood Warning Areas Contains 63 Flood Alert Areas		High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 849 Listed Buildings Intersects 1 areas designated as Scheduled Monuments Intersects 8 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites		Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of MOGDEN STW-NE catchment is designated either AONB or National Park.		Low

2.29. MOGDEN STW-South

SEA Topic	Commentary	Sensitivity assigned																																																								
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 3 Internationally designated sites (SPA, SAC, Ramsar) South West London Waterbodies, RAMSAR site Richmond Park, Special Area of Conservation (SAC) South West London Waterbodies, Special Protection Area (SPA) Intersects 12 Nationally designated sites (SSSI and NNR) <table><tr><td>Bushy Park And Home Park, SSSI</td><td>Syon Park, SSSI</td></tr><tr><td>Richmond Park, SSSI</td><td>Thorpe Hay Meadow, SSSI</td></tr><tr><td>Wraysbury No. 1 Gravel Pit, SSSI</td><td>Kempton Park Reservoirs, SSSI</td></tr><tr><td>Wraysbury & Hythe End Gravel Pits, SSSI</td><td>Wraysbury Reservoir, SSSI</td></tr><tr><td>Staines Moor, SSSI</td><td>Knight & Bessborough Reservoirs, SSSI</td></tr><tr><td>Barn Elms Wetland Centre, SSSI</td><td>Richmond Park, NNR</td></tr></table> Intersects 17 Locally designated sites (LNR) <table><tr><td>Chertsey Meads, LNR</td><td>Hounslow Heath, LNR</td></tr><tr><td>Kempton Nature Reserves, LNR</td><td>Chiswick Eyot, LNR</td></tr><tr><td>Leg Of Mutton Reservoir, LNR</td><td>Ham Lands, LNR</td></tr><tr><td>Isleworth Ait, LNR</td><td>Pevensey Road, LNR</td></tr><tr><td>Ham Common, Richmond, London, LNR</td><td>Blondin Nature Area, LNR</td></tr><tr><td>Duke'S Hollow, LNR</td><td>Arthur Jacob Nature Reserve, LNR</td></tr><tr><td>Crane Park Island, LNR</td><td>Bedfont Lakes, LNR</td></tr><tr><td>Oak Avenue Hampton, LNR</td><td>Barnes Common, LNR</td></tr><tr><td>Gunnersbury Triangle, LNR</td><td></td></tr></table> Within 10km there are 8 no. SPAs, SACs and/or Ramsar sites <table><tr><td>South West London Waterbodies, RAMSAR site</td><td>Thursley, Ash, Pirbright & Chobham, (SAC)</td></tr><tr><td>Richmond Park, (SAC)</td><td>Burnham Beeches, (SAC)</td></tr><tr><td>Windsor Forest & Great Park, (SAC)</td><td>South West London Waterbodies, (SPA)</td></tr><tr><td>Wimbledon Common, (SAC)</td><td>Thames Basin Heaths, (SPA)</td></tr></table> Within 2km there are 17 no. SSSI and/or NNR sites <table><tr><td>Bushy Park And Home Park, SSSI</td><td>Kempton Park Reservoirs, SSSI</td></tr><tr><td>Richmond Park, SSSI</td><td>Wraysbury Reservoir, SSSI</td></tr><tr><td>Wraysbury No. 1 Gravel Pit, SSSI</td><td>Knight & Bessborough Reservoirs, SSSI</td></tr><tr><td>Wraysbury & Hythe End Gravel Pits, SSSI</td><td>Langham Pond, SSSI</td></tr><tr><td>Staines Moor, SSSI</td><td>Dumsey Meadow, SSSI</td></tr><tr><td>Barn Elms Wetland Centre, SSSI</td><td>Thorpe Park No. 1 Gravel Pit, SSSI</td></tr><tr><td>Syon Park, SSSI</td><td>Windsor Forest And Great Park, SSSI</td></tr><tr><td>Thorpe Hay Meadow, SSSI</td><td>Wimbledon Common, SSSI</td></tr><tr><td></td><td>Richmond Park, NNR</td></tr></table> As a whole 11% of MOGDEN STW-South catchment, is designated either at an International, National or Local level. Intersects 2909 areas of Priority Habitat which makes up 10 % of the MOGDEN STW-South catchment area.	Bushy Park And Home Park, SSSI	Syon Park, SSSI	Richmond Park, SSSI	Thorpe Hay Meadow, SSSI	Wraysbury No. 1 Gravel Pit, SSSI	Kempton Park Reservoirs, SSSI	Wraysbury & Hythe End Gravel Pits, SSSI	Wraysbury Reservoir, SSSI	Staines Moor, SSSI	Knight & Bessborough Reservoirs, SSSI	Barn Elms Wetland Centre, SSSI	Richmond Park, NNR	Chertsey Meads, LNR	Hounslow Heath, LNR	Kempton Nature Reserves, LNR	Chiswick Eyot, LNR	Leg Of Mutton Reservoir, LNR	Ham Lands, LNR	Isleworth Ait, LNR	Pevensey Road, LNR	Ham Common, Richmond, London, LNR	Blondin Nature Area, LNR	Duke'S Hollow, LNR	Arthur Jacob Nature Reserve, LNR	Crane Park Island, LNR	Bedfont Lakes, LNR	Oak Avenue Hampton, LNR	Barnes Common, LNR	Gunnersbury Triangle, LNR		South West London Waterbodies, RAMSAR site	Thursley, Ash, Pirbright & Chobham, (SAC)	Richmond Park, (SAC)	Burnham Beeches, (SAC)	Windsor Forest & Great Park, (SAC)	South West London Waterbodies, (SPA)	Wimbledon Common, (SAC)	Thames Basin Heaths, (SPA)	Bushy Park And Home Park, SSSI	Kempton Park Reservoirs, SSSI	Richmond Park, SSSI	Wraysbury Reservoir, SSSI	Wraysbury No. 1 Gravel Pit, SSSI	Knight & Bessborough Reservoirs, SSSI	Wraysbury & Hythe End Gravel Pits, SSSI	Langham Pond, SSSI	Staines Moor, SSSI	Dumsey Meadow, SSSI	Barn Elms Wetland Centre, SSSI	Thorpe Park No. 1 Gravel Pit, SSSI	Syon Park, SSSI	Windsor Forest And Great Park, SSSI	Thorpe Hay Meadow, SSSI	Wimbledon Common, SSSI		Richmond Park, NNR	High

Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and	High																																																								

	growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 957 areas currently utilised for recreation or which benefit the community. This includes 96 allotments, 89 religious grounds, 334 playing fields, 37 sports facility, 15 golf courses, 180 public parks and 37 cemeteries. Also within the catchment are 169 areas where vulnerable population groups would be expected. This includes 158 Schools and education centres, 11 hospitals, and 0 residential care homes. This is also reflected in the designation of 80 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MOGDEN STW-South catchment 59% is classified as urban.	Medium
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 2 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 195 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Thames, Watercourses Felthamhill Brook, Watercourses Portlane Brook, Watercourses Duke Of Northumberland'S River, Watercourses River Crane, Watercourses Longford River, Watercourses River Mole, Watercourses River Wey, Watercourses Woburn Park Stream, Watercourses The Bourne, Watercourses River Brent, Watercourses Engine River, Watercourses River Ash, Watercourses County Ditch, Watercourses River Colne, Watercourses Colne Brook, Watercourses Thames Intake, Watercourses Wraysbury River, Watercourses Abbey River, Watercourses Staines Reservoirs Aqueduct, Watercourses The Creek, Watercourses River Ember, Watercourses Grand Union Canal, Watercourses Beverley Brook, Watercourses Hogsmill River, Watercourses River Mole At Esher And East Molesey, Flood Warning Areas Areas Of Chertsey Closest To The Chertsey Bourne, Flood Warning Areas River Colne And Frays River At West Drayton And Stanwell Moor, Flood Warning Areas River Thames At Hampton And Hampton Wick, Flood Warning Areas Properties Closest To The River Thames From Platts Eyot To Hampton Court Bridge, Flood Warning Areas River Thames At Chertsey, Flood Warning Areas Properties Closest To The River Thames At Old Windsor, From Friday Island To Magna	High

	Carta Island, Flood Warning Areas Tidal Thames From Richmond Bridge To Teddington Weir, Flood Warning Areas Tidal Thames From Putney Bridge To The Hogarth Lane Roundabout, Flood Warning Areas Tidal Thames From The River Brent To The River Crane, Flood Warning Areas River Hogsmill At Kingston, Flood Warning Areas River Ash At Ashford And Staines, Flood Warning Areas Colne Brook At Colnbrook, Flood Warning Areas Properties Closest To The River Thames At Wraysbury From Old Windsor Weir To Magna Carta Island, Flood Warning Areas Tidal River Crane At Isleworth, Flood Warning Areas Beverley Brook At Barnes, Flood Warning Areas Tidal River Brent At Brentford, Flood Warning Areas Tidal Thames From Mortlake High Street East To Richmond Bridge, Flood Warning Areas Tidal Thames From The River Crane To Teddington Weir, Flood Warning Areas Tidal Thames From The Hogarth Lane Roundabout To The River Brent, Flood Warning Areas River Crane At Cranford And Feltham, Flood Warning Areas River Crane At Twickenham, Flood Warning Areas River Brent In The London Boroughs Of Ealing And Hounslow, Flood Warning Areas River Thames At Trowlock Island, Flood Warning Areas Tidal Thames At Hammersmith And West Kensington, Flood Warning Areas Tidal Thames At Chiswick, Flood Warning Areas Properties Closest To The River Thames From Runnymede Pleasure Grounds, Staines To Penton Hook, Flood Warning Areas Properties Closest To The River Thames From Shepperton Lock To Beasley'S Ait, Flood Warning Areas Properties Closest To The River Thames At Sunbury, Flood Warning Areas River Thames At Shepperton And Lower Halliford, Flood Warning Areas River Thames At Staines And Egham, Flood Warning Areas River Thames At Laleham, Flood Warning Areas River Thames At Horton, Flood Warning Areas River Thames At Kingston-Upon-Thames, Flood Warning Areas Properties Closest To The River Thames From Raven'S Ait To Teddington Weir, Flood Warning Areas River Wey At Weybridge, Flood Warning Areas Beverley Brook At Wimbledon Common And Richmond Park, Flood Warning Areas Tidal Thames To The North Of Hammersmith Bridge, Flood Warning Areas River Thames At Thames Ditton, Flood Warning Areas River Thames At Hamm Court, Flood Warning Areas River Thames At Shepperton Green, Flood Warning Areas Properties Closest To The River Thames From Littleton Lane, Shepperton Green To Shepperton Lock, Flood Warning Areas Tidal Thames From Putney Bridge To Mortlake High Street East, Flood Warning Areas Tidal Thames To The South Of Hammersmith Bridge, Flood Warning Areas River Thames At East And West Molesey, Flood Warning Areas River Thames At Teddington, Flood Warning Areas River Thames At Old Windsor, Flood Warning Areas River Thames At Sunbury, Flood Warning Areas River Thames At Walton, Flood Warning Areas River Thames At Wraysbury, Flood Warning Areas Chertsey Bourne At Chertsey, Flood Warning Areas Lower River Mole Area At Esher And East Molesey, Flood Alert Areas Tidal Thames In The Boroughs Of Kensington And Chelsea, Hammersmith And Fulham, Ealing And Hounslow, Flood Alert Areas Beverley Brook Area In Merton, Sutton, Kingston Upon Thames, Richmond Upon Thames And Wandsworth, Flood Alert Areas River Thames From Hampton And Thames Ditton To Teddington, Flood Alert Areas Windle Brook And Hale, Mill And Addlestone Bournes, Flood Alert Areas Groundwater Flooding In Egham, Flood Alert Areas Tidal River Brent, Flood Alert Areas Tidal Thames Riverside From Putney Bridge To Teddington Weir, Flood Alert Areas	

	Tidal River Crane, Flood Alert Areas River Hogsmill Area From Ewell To Kingston Upon Thames, Flood Alert Areas River Thames From Datchet To Shepperton Green, Flood Alert Areas Fluvial River Crane, Flood Alert Areas River Brent From Hendon To Brentford, Flood Alert Areas Lower River Colne And Frays River, Flood Alert Areas Chertsey Bourne, Flood Alert Areas River Thames At Trowlock Island, Flood Alert Areas Tidal Thames In The Boroughs Of Wandsworth And Richmond-Upon-Thames, Flood Alert Areas Lower River Wey, Flood Alert Areas River Thames From Shepperton To Molesey, Flood Alert Areas Colne Brook At Iver And Colnbrook, Flood Alert Areas River Ash In The Borough Of Spelthorne, Flood Alert Areas Of the total area of the catchment, 37 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 1, Soil grade 1 Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 65 % of MOGDEN STW-South catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	High
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 12 no. areas designated as Air Quality Management Area as follows: Wandsworth Aqma, AQMA Walton Aqma, AQMA Wraysbury/M25, AQMA Kingston Upon Thames Aqma, AQMA Hampton Court Aqma, AQMA Ealing Aqma, AQMA M25 Aqma, AQMA Hillingdon Aqma, AQMA Hammersmith And Fulham Aqma, AQMA Hounslow Aqma, AQMA Richmond Aqma, AQMA Spelthorne Aqma, AQMA AQMAs constitute 86 % area of MOGDEN STW-South catchment. Intersects 36 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 132 no. sensitive receptors. This includes 123 Schools and education centres, 9 hospitals, and 0 residential care homes Intersects 650 no areas utilised for recreation or which benefit the community. This includes 76 Allotments, 72 religious grounds, 268 playing fields, 31 sports facility, 14 golf course, 157 public park and 32 cemeteries Within 200 meters, there are 16 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	High

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 116 Communities at Risk Areas (flooding) Contains 101 Flood Warning Areas Contains 78 Flood Alert Areas		High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 1 World Heritage Sites Intersects 1742 Listed Buildings Intersects 23 areas designated as Scheduled Monuments Intersects 26 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 1 World Heritage Sites Royal Botanic Gardens, Kew, World heritage sites		High
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of MOGDEN STW-South catchment is designated either AONB or National Park.		Low

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar)	High

	Intersects 4 Nationally designated sites (SSSI and NNR) Kingcup Meadows And Oldhouse Wood, SSSI Old Rectory Meadows, SSSI Fray'S Farm Meadows, SSSI Denham Lock Wood, SSSI Intersects 7 Locally designated sites (LNR) Hounslow Heath, Local Nature Reserve Denham Quarry Park (Mapped Boundary Not Verified), Local Nature Reserve Yeading Meadows (Mapped Boundary Not Verified), Local Nature Reserve Yeading Brook Meadows (Mapped Boundary Not Verified), Local Nature Reserve Denham Country Park (Mapped Boundary Not Verified), Local Nature Reserve Frays Valley, Local Nature Reserve Cranebank, Local Nature Reserve Within 10km there are 6 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Richmond Park, Special Area of Conservation (SAC) Windsor Forest & Great Park, Special Area of Conservation (SAC) Burnham Beeches, Special Area of Conservation (SAC) Wimbledon Common, Special Area of Conservation (SAC) South West London Waterbodies, Special Protection Area (SPA) Within 2km there are 8 no. SSSI and/or NNR sites Kingcup Meadows And Oldhouse Wood, SSSI Old Rectory Meadows, SSSI Fray'S Farm Meadows, SSSI Denham Lock Wood, SSSI Wraysbury Reservoir, SSSI Staines Moor, SSSI Mid Colne Valley, SSSI Black Park, SSSI As a whole 1% of MOGDEN STW-WEST catchment, is designated either at an International, National or Local level. Intersects 1360 areas of Priority Habitat which makes up 7 % of the MOGDEN STW-WEST catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 483 areas currently utilised for recreation or which benefit the community. This includes 44 allotments, 36 religious grounds, 192 playing fields, 15 sports facility, 23 golf courses, 71 public parks and 12 cemeteries. Also within the catchment are 90 areas where vulnerable population groups would be expected. This includes 88 Schools and education centres, 2 hospitals, and 0 residential care homes. This is also reflected in the designation of 41 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of MOGDEN STW-WEST catchment 69% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many	High

	of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 67 statutory rivers / unnamed water bodies. Water environment features intersected include: <table><tr><td>Grand Union Canal, Watercourses</td><td>River Colne And Frays River At West</td></tr><tr><td>River Colne, Watercourses</td><td>Drayton And Stanwell Moor, Flood</td></tr><tr><td>, Watercourses</td><td>Warning Areas</td></tr><tr><td>Alder Bourne, Watercourses</td><td>River Colne At Willowbank, Flood</td></tr><tr><td>Shire Ditch, Watercourses</td><td>Warning Areas</td></tr><tr><td>Fray'S River, Watercourses</td><td>Yeading Brook At Hillingdon, Flood</td></tr><tr><td>Colne Brook, Watercourses</td><td>Warning Areas</td></tr><tr><td>River Misbourne, Watercourses</td><td>River Crane At Cranford And Feltham,</td></tr><tr><td>Yeading Brook, Watercourses</td><td>Flood Warning Areas</td></tr><tr><td>River Pinn, Watercourses</td><td>Colne Brook At Colnbrook, Flood Warning</td></tr><tr><td>River Crane, Watercourses</td><td>Areas</td></tr><tr><td>Frogs Ditch, Watercourses</td><td>River Pinn At Uxbridge, Flood Warning</td></tr><tr><td>Bigley Ditch, Watercourses</td><td>Areas</td></tr><tr><td>Wraysbury River, Watercourses</td><td>Lower River Colne And Frays River, Flood</td></tr><tr><td>Poyle Channel, Watercourses</td><td>Alert Areas</td></tr><tr><td>Colne Brook At Iver, Flood Warning Areas</td><td>Fluvial River Crane, Flood Alert Areas</td></tr><tr><td>River Crane At Southall, Flood Warning</td><td>Colne Brook At Iver And Colnbrook, Flood</td></tr><tr><td>Areas</td><td>Alert Areas</td></tr><tr><td>River Misbourne At The Chalfonts, Flood</td><td>River Misbourne, Flood Alert Areas</td></tr><tr><td>Warning Areas</td><td>River Pinn And Woodridings Stream,</td></tr><tr><td>River Pinn At Yiewsley, Flood Warning</td><td>Flood Alert Areas</td></tr><tr><td>Areas</td><td></td></tr></table> Of the total area of the catchment, 10 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk. Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 5 Communities at Risk Areas (flooding) Contains 4 Flood Warning Areas Contains 4 Flood Alert Areas	High																																																																								
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are	Low																																																																								

	recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 12 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of RIVERSIDE - RA01 catchment is designated either AONB or National Park.	Low

2.32. RIVERSIDE - RA02

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Epping Forest, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Curtismill Green, Site of Special Scientific Interest Hainault Forest, Site of Special Scientific Interest As a whole 0% of RIVERSIDE - RA02 catchment, is designated either at an International, National or Local level. Intersects 60 areas of Priority Habitat which makes up less than 1 % of the RIVERSIDE - RA02 catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 96 areas currently utilised for recreation or which benefit the community. This includes 9 allotments, 13 religious grounds, 26 playing fields, 4 sports facility, 7 golf courses, 15 public parks and 2 cemeteries.	High

	Also within the catchment are 20 areas where vulnerable population groups would be expected. This includes 17 Schools and education centres, 3 hospitals, and 0 residential care homes. This is also reflected in the designation of 6 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of RIVERSIDE - RA02 catchment 98% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 8 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Black'S Brook, Watercourses River Rom, Watercourses Bourne Brook, Watercourses River Rom At Collier Row, Flood Warning Areas River Rom At Romford, Flood Warning Areas Rivers Beam And Rom, Flood Alert Areas Of the total area of the catchment, 5 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Grade 2, Soil grades 2 and 3a Urban, Urban Land As a whole 100 % of RIVERSIDE - RA02 catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 2 no. areas designated as Air Quality Management Area as follows: Havering Aqma, AQMA Barking And Dagenham Aqma, AQMA AQMAs constitute 95 % area of RIVERSIDE - RA02 catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 14 no. sensitive receptors. This includes 14 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 39 no areas utilised for recreation or which benefit the community. This includes 7 Allotments, 10 religious grounds, 8 playing fields, 0 sports facility, 3 golf course, 10 public park and 1 cemeteries	Medium

	Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 47 sensitive receptors (School and education centres, hospitals or residential care homes) <table><tr><td>St Peter'S Roman Catholic Primary School</td><td>Church Of St John The Divine</td></tr><tr><td>Parklands Infant And Junior Schools</td><td>St Edward The Confessor'S Church</td></tr><tr><td>Crownfield Infant School</td><td>Corpus Christi Roman Catholic Church</td></tr><tr><td>Crownfield Junior School</td><td>Church Of The Good Shepherd</td></tr><tr><td>St Patrick'S Roman Catholic Primary School</td><td>None, Religious grounds</td></tr><tr><td>Rise Park Junior School</td><td>Play Ground, Playing fields</td></tr><tr><td>Rise Park Infants School</td><td>None, Playing fields</td></tr><tr><td>Clockhouse Primary School</td><td>Chelmsford Avenue Play Area</td></tr><tr><td>Pinewood Primary School</td><td>None, Sports facility</td></tr><tr><td>Dame Tipping Church Of England Primary School</td><td>Romford Golf Course</td></tr><tr><td>St Edward'S Church Of England (Voluntary Aided) Primary School</td><td>None, Golf course</td></tr><tr><td>Gidea Park Primary School</td><td>Risebridge Golf Course</td></tr><tr><td>The Mawney School</td><td>The Warren Park Golf Centre</td></tr><tr><td>Crowlands Primary School</td><td>Cottons Park</td></tr><tr><td>Concordia Academy</td><td>The Green, Public park</td></tr><tr><td>None, Allotments</td><td>Raphael Park</td></tr><tr><td>St John'S Church</td><td>None, Public park</td></tr><tr><td>Church Of The Ascension</td><td>Havering Country Park</td></tr><tr><td>Havering Road Methodist Church</td><td>Rise Park</td></tr><tr><td>St James' Family Church</td><td>Coronation Garden, Public park</td></tr><tr><td>Collier Row Methodist Church</td><td>Lodge Farm Park</td></tr><tr><td>St Andrew'S Church</td><td>Educational Nature Reserve, Public park</td></tr><tr><td></td><td>Jubilee Park</td></tr><tr><td></td><td>Bedfords Park</td></tr><tr><td></td><td>None, Cemeteries</td></tr></table>	St Peter'S Roman Catholic Primary School	Church Of St John The Divine	Parklands Infant And Junior Schools	St Edward The Confessor'S Church	Crownfield Infant School	Corpus Christi Roman Catholic Church	Crownfield Junior School	Church Of The Good Shepherd	St Patrick'S Roman Catholic Primary School	None, Religious grounds	Rise Park Junior School	Play Ground, Playing fields	Rise Park Infants School	None, Playing fields	Clockhouse Primary School	Chelmsford Avenue Play Area	Pinewood Primary School	None, Sports facility	Dame Tipping Church Of England Primary School	Romford Golf Course	St Edward'S Church Of England (Voluntary Aided) Primary School	None, Golf course	Gidea Park Primary School	Risebridge Golf Course	The Mawney School	The Warren Park Golf Centre	Crowlands Primary School	Cottons Park	Concordia Academy	The Green, Public park	None, Allotments	Raphael Park	St John'S Church	None, Public park	Church Of The Ascension	Havering Country Park	Havering Road Methodist Church	Rise Park	St James' Family Church	Coronation Garden, Public park	Collier Row Methodist Church	Lodge Farm Park	St Andrew'S Church	Educational Nature Reserve, Public park		Jubilee Park		Bedfords Park		None, Cemeteries

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 2 Communities at Risk Areas (flooding) Contains 5 Flood Warning Areas Contains 2 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 27 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 1 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Medium
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of RIVERSIDE - RA04 catchment is designated either AONB or National Park.	Low

2.35. RIVERSIDE - RA05

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Inner Thames Marshes, Site of Special Scientific Interest Intersects 5 Locally designated sites (LNR) Beam Valley, Local Nature Reserve The Chase, Local Nature Reserve Rainham Marshes, Local Nature Reserve Ingrebourne Valley, Local Nature Reserve East Brookend Country Park, Local Nature Reserve Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites	High

	Epping Forest, Special Area of Conservation (SAC) Within 2km there are 4 no. SSSI and/or NNR sites Inner Thames Marshes, Site of Special Scientific Interest Ingrebourne Marshes, Site of Special Scientific Interest Hornchurch Cutting, Site of Special Scientific Interest Purfleet Road, Aveley, Site of Special Scientific Interest As a whole less than 1% of RIVERSIDE - RA05 catchment, is designated either at an International, National or Local level. Intersects 41 areas of Priority Habitat which makes up less than 1 % of the RIVERSIDE - RA05 catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 174 areas currently utilised for recreation or which benefit the community. This includes 17 allotments, 18 religious grounds, 54 playing fields, 5 sports facility, 6 golf courses, 31 public parks and 7 cemeteries. Also within the catchment are 36 areas where vulnerable population groups would be expected. This includes 33 Schools and education centres, 3 hospitals, and 0 residential care homes. This is also reflected in the designation of 10 no. Noise Important Areas within the catchment.	High
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of RIVERSIDE - RA05 catchment 96% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 9 statutory rivers / unnamed water bodies. Water environment features intersected include: River Rom, Watercourses Beam River, Watercourses Rainham Creek, Watercourses , Watercourses Black'S Brook, Watercourses Tidal Thames From The Mardyke To Barking Creek, Flood Warning Areas River Ingrebourne At Hornchurch, Flood Warning Areas River Beam At Dagenham, Flood Warning Areas River Rom At Romford, Flood Warning Areas River Ingrebourne At Harold Park And Hornchurch, Flood Alert Areas Tidal Thames Riverside From Dartford Creek And The Mardyke To The Thames Barrier, Flood Alert Areas Tidal Thames In The Boroughs Of Havering, Barking And Dagenham, And Newham, Flood Alert Areas Lower River Roding, Flood Alert Areas Rivers Beam And Rom, Flood Alert Areas	Medium

	Of the total area of the catchment, 24 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.																																													
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 1, Soil grade 1 Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 86 % of RIVERSIDE - RA05 catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	High																																												
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 2 no. areas designated as Air Quality Management Area as follows: Havering Aqma, AQMA Barking And Dagenham Aqma, AQMA AQMAs constitute 100 % area of RIVERSIDE - RA05 catchment. Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 20 no. sensitive receptors. This includes 17 Schools and education centres, 3 hospitals, and 0 residential care homes Intersects 62 no areas utilised for recreation or which benefit the community. This includes 11 Allotments, 9 religious grounds, 18 playing fields, 2 sports facility, 1 golf course, 18 public park and 3 cemeteries Within 200 meters, there are 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Inner Thames Marshes, Site of Special Scientific Interest Ingrebourne Marshes, Site of Special Scientific Interest Within 200 meters, there are 61 sensitive receptors (School and education centres, hospitals or residential care homes) <table><tr><td>Parsonage Farm Primary School</td><td>St Matthews Church</td></tr><tr><td>John Perry Primary School</td><td>Roman Catholic Church Of Christ The</td></tr><tr><td>Suttons Primary School</td><td>Eternal High Priest</td></tr><tr><td>Newtons Primary School</td><td>St Helens And St Giles Church</td></tr><tr><td>Concordia Academy</td><td>Rainham Methodist Church</td></tr><tr><td>Hacton Primary School</td><td>None, Religious grounds</td></tr><tr><td>La Salette Presbytery School</td><td>St Mary And St Peter'S Church</td></tr><tr><td>Brady Primary School</td><td>Church Of Our Lady Of La Salette</td></tr><tr><td>Hylands Primary School</td><td>Gidea Park Methodist Church</td></tr><tr><td>Wykeham Primary School/Harrow Lodge</td><td>St Edward The Confessor'S Church</td></tr><tr><td>Primary School</td><td>St Andrew'S Church</td></tr><tr><td>Squirrels Heath Infant And Junior School</td><td>St Peter And St Paul'S Church</td></tr><tr><td>Rush Green Primary School</td><td>None, Playing fields</td></tr><tr><td>The Leys Primary School</td><td>None, Sports facility</td></tr><tr><td>St Mary'S Roman Catholic Primary School</td><td>None, Golf course</td></tr><tr><td>Elm Park Primary School</td><td>Central Park</td></tr><tr><td>The R J Mitchell Primary School</td><td>None, Public park</td></tr><tr><td>Scotts Primary School</td><td>Grenfell Park</td></tr><tr><td>Scargill Junior School</td><td>Harrow Lodge Park</td></tr><tr><td>Scargill Infant School</td><td>Hornchurch Country Park</td></tr><tr><td>Beam Primary School</td><td>Jubilee Park</td></tr><tr><td>Whybridge Infants School</td><td>Lodge Farm Park</td></tr></table>	Parsonage Farm Primary School	St Matthews Church	John Perry Primary School	Roman Catholic Church Of Christ The	Suttons Primary School	Eternal High Priest	Newtons Primary School	St Helens And St Giles Church	Concordia Academy	Rainham Methodist Church	Hacton Primary School	None, Religious grounds	La Salette Presbytery School	St Mary And St Peter'S Church	Brady Primary School	Church Of Our Lady Of La Salette	Hylands Primary School	Gidea Park Methodist Church	Wykeham Primary School/Harrow Lodge	St Edward The Confessor'S Church	Primary School	St Andrew'S Church	Squirrels Heath Infant And Junior School	St Peter And St Paul'S Church	Rush Green Primary School	None, Playing fields	The Leys Primary School	None, Sports facility	St Mary'S Roman Catholic Primary School	None, Golf course	Elm Park Primary School	Central Park	The R J Mitchell Primary School	None, Public park	Scotts Primary School	Grenfell Park	Scargill Junior School	Harrow Lodge Park	Scargill Infant School	Hornchurch Country Park	Beam Primary School	Jubilee Park	Whybridge Infants School	Lodge Farm Park	High

Appendix I. Existing STW

This document presents all proformas for the Existing STW sites. These are environmental baseline proformas that cover the nine SEA topics. Also reported is the sensitivity assigned to the SEA topic based on the rules presented in Table 4-2 of the Main Report.

GSOs listed in the Catchment Proformas are those briefed for the catchment. Significance of effect for each GSO indicated has therefore been generated and are presented in Appendix E. Where no entry is made against the 'GSO Proposed' row, no GSO has been promoted for this location. They are, nevertheless, included here as they inform part of the environmental baseline gathering exercise. Please see Chapter 11 of the Environmental Report and Appendix E which highlights those GSOs promoted in the Final Plan.

1.2. Abbess Roding STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Abbess Roding STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Abbess Roding STW catchment area.	Low
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Abbess Roding STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and	Medium

	operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a As a whole 100 % of Abbess Roding STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Abbess Roding STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Abbess Roding STW catchment is designated either AONB or National Park.	Low

1.3. ABINGDON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites Cothill Fen, Special Area of Conservation (SAC) Little Wittenham, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Culham Brake, Site of Special Scientific Interest As a whole 0% of ABINGDON STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the ABINGDON STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Alton STW catchment is designated either AONB or National Park.	Low

1.7. Andoversford STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Andoversford STW catchment, is designated either at an International, National or Local level. Intersects 2 areas of Priority Habitat which makes up 51 % of the Andoversford STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Andoversford STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: River Coln, Watercourses River Coln And Its Tributaries, Flood Alert Areas Of the total area of the catchment, 75 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and	Medium

	operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Andoversford STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Andoversford STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low

Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 1 Locally designated sites (LNR) Snaky Lane, Local Nature Reserve Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 2 no. SSSI and/or NNR sites Basingstoke Canal, Site of Special Scientific Interest Ash To Brookwood Heaths, Site of Special Scientific Interest As a whole less than 1% of Ash Vale STW catchment, is designated either at an International, National or Local level. Intersects 4 areas of Priority Habitat which makes up 16 % of the Ash Vale STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 6 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 0 religious grounds, 3 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 2 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Ash Vale STW catchment 100% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: Blackwater River, Watercourses River Blackwater At Aldershot And Farnborough, Flood Warning Areas River Blackwater And The Cove Brook, Flood Alert Areas Of the total area of the catchment, 66 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium

Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 62 % of Ash Vale STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Ash Vale STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 1 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 4 sensitive receptors (School and education centres, hospitals or residential care homes) Holly Lodge Primary School, Schools and Education centres , Allotments , Playing fields Sandy Lane Nature Reserve, Public park	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park	Low

As a whole 0 % of Ash Vale STW catchment is designated either AONB or National Park.

1.13. Ashton Keynes STW Catchment

Also within the catchment are 2 areas where vulnerable population groups would be expected. This includes 2 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of BANBURY STW catchment 33% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of	Medium

	the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Cherwell At Banbury, Flood Warning Areas River Cherwell From Below Banbury To Just Above Upper Heyford, Flood Warning Areas River Cherwell From Charwelton To Just Above Upper Heyford, Flood Alert Areas Of the total area of the catchment, 5 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of BANBURY STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of BANBURY STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 2 sensitive receptors (School and education centres, hospitals or residential care homes) , Allotments , Public park	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 2 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields	Low

	Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of BANBURY STW catchment is designated either AONB or National Park.	Low

1.18. Barford STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Barford STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Barford STW catchment area.	Low
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing	High

	pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of BAYDON STW catchment is designated either AONB or National Park.	

1.23. Beckley STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Oxford Meadows, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Otmoor, Site of Special Scientific Interest As a whole 0% of Beckley STW catchment, is designated either at an International, National or Local level. Intersects 2 areas of Priority Habitat which makes up 63 % of the Beckley STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Beckley STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following:	Medium

	Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Beckley STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Beckley STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Berkhamsted STW catchment is designated either AONB or National Park.	Medium

1.28. Bibury STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Bibury STW catchment, is designated either at an International, National or Local level. Intersects 1 areas of Priority Habitat which makes up 1 % of the Bibury STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which	Low

	material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Bibury STW catchment 0% is classified as urban.	
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Low
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Bibury STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Bibury STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens	Low

	Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Cotswolds, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of Bibury STW catchment is designated either AONB or National Park. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level	Low

	of urbanisation within it. In respect of BLETCHINGDON STW catchment 0% is classified as urban.	
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of BLETCHINGDON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of BLETCHINGDON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens	Low

	Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of BLETCHINGDON STW catchment is designated either AONB or National Park.	Low

1.34. BLOXHAM STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of BLOXHAM STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the BLOXHAM STW catchment area.	Low
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 3 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 2 playing fields, 1 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low

The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Bourton-on-the-Water STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments	Low

	Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Cotswolds, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of Bourton-on-the-Water STW catchment is designated either AONB or National Park.	High

1.39. Boxford STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 1 Nationally designated sites (SSSI and NNR) Boxford Chalk Pit, Site of Special Scientific Interest Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Kennet & Lambourn Floodplain, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Kennet Valley Alderwoods, Special Area of Conservation (SAC) Within 2km there are 6 no. SSSI and/or NNR sites Boxford Chalk Pit, Site of Special Scientific Interest Boxford Water Meadows, Site of Special Scientific Interest River Lambourn, Site of Special Scientific Interest Easton Farm Meadow, Site of Special Scientific Interest Winterbourne Chalk Pit, Site of Special Scientific Interest Kennet And Lambourn Floodplain, Site of Special Scientific Interest As a whole 99% of Boxford STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Boxford STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes.	Low

	This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Boxford STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Low
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a As a whole 100 % of Boxford STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of Boxford STW catchment. Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 5 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Kennet & Lambourn Floodplain, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Boxford Chalk Pit, Site of Special Scientific Interest Boxford Water Meadows, Site of Special Scientific Interest River Lambourn, Site of Special Scientific Interest Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Medium

Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Brickendon STW catchment is designated either AONB or National Park.	Low

1.44. Broadwell STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Broadwell STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Broadwell STW catchment area.	Low
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries.	Low

	Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Broadwell STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 36 % of Broadwell STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of Broadwell STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from	Low

	infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites

This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Burstow STW catchment 0% is classified as urban.	Low

Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 3 statutory rivers / unnamed water bodies. Water environment features intersected include: Burstow Stream, Watercourses , Watercourses Burstow Stream At East And North Horley, Flood Warning Areas Upper River Mole, Ifield Brook, Gatwick Stream And Burstow Stream, Flood Alert Areas Of the total area of the catchment, 100 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 20 % of Burstow STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Burstow STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments	Low

	Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Burstow STW catchment is designated either AONB or National Park.	Low

1.50. Buscot STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Buscot STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Buscot STW catchment area.	Low
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites Cothill Fen, Special Area of Conservation (SAC) Hackpen Hill, Special Area of Conservation (SAC) Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Charney Bassett STW catchment, is designated either at an International, National or Local level. Intersects 1 areas of Priority Habitat which makes up less than 1 % of the Charney Bassett STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level	Low

	of urbanisation within it. In respect of Charney Bassett STW catchment 0% is classified as urban.	
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Charney Bassett STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Charney Bassett STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens	Low

	Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Charney Bassett STW catchment is designated either AONB or National Park.	Low

Sensitive receptors within the catchment have been identified and include the following; 2 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes.	Low

	This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Chieveley STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Lambourn And Its Tributaries From Upper Lambourn Down To Newbury, Flood Alert Areas Of the total area of the catchment, 28 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Chieveley STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of Chieveley STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are	Low

	recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of Chieveley STW catchment is designated either AONB or National Park.	High

The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a As a whole 100 % of Chipping Warden STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of Chipping Warden STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are	Low

	recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Chipping Warden STW catchment is designated either AONB or National Park.	Low

1.71. Chobham STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 5 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Windsor Forest & Great Park, Special Area of Conservation (SAC) Thames Basin Heaths, Special Protection Area (SPA) South West London Waterbodies, Special Protection Area (SPA) Within 2km there are 3 no. SSSI and/or NNR sites Horsell Common, Site of Special Scientific Interest Chobham Common, Site of Special Scientific Interest Chobham Common, National Nature Reserve As a whole 0% of Chobham STW catchment, is designated either at an International, National or Local level. Intersects 2 areas of Priority Habitat which makes up 3 % of the Chobham STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following;	Low

	1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 2 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Chobham STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: The Bourne, Watercourses Hale Bourne And Addlestone Bourne At Chobham, Flood Warning Areas Windle Brook And Hale, Mill And Addlestone Bournes, Flood Alert Areas Of the total area of the catchment, 52 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of Chobham STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low

Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Clanfield STW catchment is designated either AONB or National Park.	Low

1.76. CLAVERING STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of CLAVERING STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the CLAVERING STW catchment area.	Low
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following;	Low

	4 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 2 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of CLAVERING STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Stort At Clavering And Manuden, Flood Warning Areas River Stort And Stansted Brook Catchment, Flood Alert Areas Of the total area of the catchment, 63 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of CLAVERING STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of CLAVERING STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 3 sensitive receptors (School and education centres, hospitals or residential care homes) Clavering Primary School, Schools and Education centres , Allotments , Religious grounds	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier	Medium

	summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. 	1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of COTTERED STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Beane Catchment, Flood Alert Areas Of the total area of the catchment, 24 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of COTTERED STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of COTTERED STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas	Medium

	Contains 1 Flood Alert Areas	
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of COTTERED STW catchment is designated either AONB or National Park. Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 96 % of Crossness STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 1 no. areas designated as Air Quality Management Area as follows: Bexley Aqma, AQMA AQMAs constitute 100 % area of Crossness STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 1 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 1 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Within 200 meters, there are 2 sensitive receptors (School and education centres, hospitals or residential care homes) , Golf course Southmere Park, Public park	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 3 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 3 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Crossness STW catchment is designated either AONB or National Park.	Low

1.87. Cropredy STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Cropredy STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Cropredy STW catchment area.	Low

Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Cropredy STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, less than 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 73 % of Cropredy STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Didcot STW catchment is designated either AONB or National Park.	Low

1.92. Dorchester STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Little Wittenham, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Little Wittenham, Site of Special Scientific Interest As a whole 0% of Dorchester STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Dorchester STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following;	Low

	3 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 2 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Dorchester STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Thames From Days Lock Down To South Stoke, Flood Warning Areas River Thame At Dorchester, Flood Warning Areas River Thame And Chalgrove Brook, Flood Alert Areas River Thames And Its Tributaries From Days Lock To Above Pangbourne, Flood Alert Areas Of the total area of the catchment, 100 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 1, Soil grade 1 As a whole 98 % of Dorchester STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	High
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Dorchester STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier	Medium

	summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 2 Flood Warning Areas Contains 2 Flood Alert Areas	
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low

A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Mole Gap To Reigate Escarpment, Special Area of Conservation (SAC)	Medium

	Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Earlswood STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Earlswood STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 6 areas currently utilised for recreation or which benefit the community. This includes 3 allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 1 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 1 hospitals, and 0 residential care homes. This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Earlswood STW catchment 4% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: Earlswood Brook, Watercourses River Mole And Its Tributaries From Kinnersley Manor To South Hersham, Flood Alert Areas Of the total area of the catchment, 14 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of Earlswood STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Earlswood STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 1 no areas utilised for recreation or which benefit the community. This includes 1 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 3 sensitive receptors (School and education centres, hospitals or residential care homes) , Allotments , Playing fields Redhill And Reigate Golf Course, Golf course	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Earlswood STW catchment is designated either AONB or National Park.	Low

1.98. East Grafton STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR)	Medium

	Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites River Avon, Special Area of Conservation (SAC) Salisbury Plain, Special Area of Conservation (SAC) Salisbury Plain, Special Protection Area (SPA) Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of East Grafton STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the East Grafton STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Ebrington STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Low
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of Ebrington STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter	Low

	controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Ebrington STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Cotswolds, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of Ebrington STW catchment is designated either AONB or National Park. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Eydon STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 2 sensitive receptors (School and education centres, hospitals or residential care homes) , Allotments The Green, Public park	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Eydon STW catchment is designated either AONB or National Park.	Low

1.108. Fairford STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites North Meadow & Clattinger Farm, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Cotswold Water Park, Site of Special Scientific Interest Whelford Meadow, Site of Special Scientific Interest As a whole 0% of Fairford STW catchment, is designated either at an International, National or Local level. Intersects 2 areas of Priority Habitat which makes up less than 1 % of the Fairford STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 3 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 2 religious grounds, 0 playing fields, 1 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Fairford STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and	Medium

	operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Fairford STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Fairford STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) , Religious grounds	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing	High

	pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Cotswolds, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of Finstock STW catchment is designated either AONB or National Park.	

1.113. Fleet STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 4 no. SSSI and/or NNR sites Castle Bottom To Yateley And Hawley Commons, Site of Special Scientific Interest West Minley Meadow, Site of Special Scientific Interest Foxlease And Ancells Meadows, Site of Special Scientific Interest Fleet Pond, Site of Special Scientific Interest As a whole 0% of Fleet STW catchment, is designated either at an International, National or Local level. Intersects 5 areas of Priority Habitat which makes up 2 % of the Fleet STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 5 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 1 golf courses, 2 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Fleet STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There	Medium

	are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 3 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Whitewater And River Hart, Flood Alert Areas Of the total area of the catchment, 25 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of Fleet STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Fleet STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low

Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Fleet STW catchment is designated either AONB or National Park. Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 1 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 1 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Gerrards Cross STW catchment 0% is classified as urban.	Low

Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: River Misbourne, Watercourses River Misbourne At The Chalfonts, Flood Warning Areas River Misbourne, Flood Alert Areas Of the total area of the catchment, less than 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Gerrards Cross STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Gerrards Cross STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens	Low

	Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Gerrards Cross STW catchment is designated either AONB or National Park.	Low

1.119. Goring STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites Hartslock Wood, Special Area of Conservation (SAC) Little Wittenham, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Moulsford Downs, Site of Special Scientific Interest As a whole 0% of Goring STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Goring STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Greatworth STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Greatworth STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing	Low

	pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Greatworth STW catchment is designated either AONB or National Park.	

1.124. Greenham Common STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Kennet & Lambourn Floodplain, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Kennet Valley Alderwoods, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Greenham And Crookham Commons, Site of Special Scientific Interest Bowdown And Chamberhouse Woods, Site of Special Scientific Interest As a whole 0% of Greenham Common STW catchment, is designated either at an International, National or Local level. Intersects 3 areas of Priority Habitat which makes up 14 % of the Greenham Common STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Greenham Common STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There	Medium

	are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Enborne From Gore End Down To Aldermaston, Flood Warning Areas River Enborne And Foudry Brook, Flood Alert Areas Of the total area of the catchment, 34 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of Greenham Common STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low

Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites	Low

	Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Haddenham STW catchment is designated either AONB or National Park.	Low

1.129. HAMBLEDEN STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Chilterns Beechwoods, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Rodbred Wood, Site of Special Scientific Interest Temple Island Meadows, Site of Special Scientific Interest As a whole 0% of HAMBLEDEN STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the HAMBLEDEN STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low

Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of HAMBLEDEN STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 1 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of HAMBLEDEN STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of HAMBLEDEN STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites	Low

	Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 6 no. SPAs, SACs and/or Ramsar sites Thursley & Ockley Bogs, RAMSAR site Woolmer Forest, Special Area of Conservation (SAC) Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Ebernoe Common, Special Area of Conservation (SAC) Wealden Heaths Phase II, Special Protection Area (SPA) Thursley, Hankley & Frensham Commons, Special Protection Area (SPA) Within 2km there are 2 no. SSSI and/or NNR sites Bramshott And Ludshott Commons, Site of Special Scientific Interest Devil's Punch Bowl, Site of Special Scientific Interest As a whole 0% of Haslemere STW catchment, is designated either at an International, National or Local level.	Medium

	Intersects 6 areas of Priority Habitat which makes up 49 % of the Haslemere STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 11 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 2 religious grounds, 5 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 2 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Haslemere STW catchment 97% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 2 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses River Wey, Watercourses Upper River Wey, Flood Alert Areas Of the total area of the catchment, 23 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 100 % of Haslemere STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Haslemere STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes	Medium

	Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 4 sensitive receptors (School and education centres, hospitals or residential care homes) , Allotments St Michael'S Church, Religious grounds , Playing fields , Cemeteries	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Haslemere STW catchment is designated either AONB or National Park.	Medium

1.135. Hatfield Heath STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR)	Low

	Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Hatfield Heath STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Hatfield Heath STW catchment area.

Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Hockford STW catchment 8% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 2 statutory rivers / unnamed water bodies. Water environment features intersected include: Congo Stream, Watercourses Stanford Brook, Watercourses Hoe Stream, Flood Alert Areas Of the total area of the catchment, 57 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of Hockford STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows:	Medium

	AQMAs constitute 0 % area of Hockford STW catchment. Intersects 3 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 1 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 3 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Thames Basin Heaths, Special Protection Area (SPA) Ash To Brookwood Heaths, Site of Special Scientific Interest Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) Fox Corner, Public park	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Hockford STW catchment is designated either AONB or National Park.	Low

1.140. Hogsmill STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR)	Medium

	Intersects 0 Locally designated sites (LNR) Within 10km there are 4 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Richmond Park, Special Area of Conservation (SAC) Wimbledon Common, Special Area of Conservation (SAC) South West London Waterbodies, Special Protection Area (SPA) Within 2km there are 3 no. SSSI and/or NNR sites Bushy Park And Home Park, Site of Special Scientific Interest Richmond Park, Site of Special Scientific Interest Richmond Park, National Nature Reserve As a whole 0% of Hogsmill STW catchment, is designated either at an International, National or Local level. Intersects 3 areas of Priority Habitat which makes up 2 % of the Hogsmill STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 17 areas currently utilised for recreation or which benefit the community. This includes 3 allotments, 0 religious grounds, 9 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 2 cemeteries. Also within the catchment are 3 areas where vulnerable population groups would be expected. This includes 3 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Medium
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Hogsmill STW catchment 100% is classified as urban.	High
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: Hogsmill River, Watercourses River Hogsmill At Kingston, Flood Warning Areas River Hogsmill Area From Ewell To Kingston Upon Thames, Flood Alert Areas Of the total area of the catchment, 52 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Urban, Urban Land As a whole 100 % of Hogsmill STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land. Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of Horton-Cum-Studley STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Horton-Cum-Studley STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park	Low

As a whole 0 % of Horton-Cum-Studley STW catchment is designated either AONB or National Park.

1.145. Hungerford STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Kennet & Lambourn Floodplain, Special Area of Conservation (SAC) Kennet Valley Alderwoods, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Within 2km there are 3 no. SSSI and/or NNR sites River Kennet, Site of Special Scientific Interest Kennet And Lambourn Floodplain, Site of Special Scientific Interest Freeman'S Marsh, Site of Special Scientific Interest As a whole 0% of Hungerford STW catchment, is designated either at an International, National or Local level. Intersects 2 areas of Priority Habitat which makes up 44 % of the Hungerford STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Hungerford STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones	Medium

	Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of Hungerford STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered;	Low

	Intersects 0 areas designated as Area of Outstanding Natural Beauty	
	Intersects 0 areas designated as National Park	
	As a whole 0 % of Iwer (North) STW catchment is designated either AONB or National Park.	

1.150. Kimpton STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Kimpton STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Kimpton STW catchment area.	Low
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Kimpton STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones	Low

	Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Groundwater Flooding In Kimpton And Lilley Bottom, Flood Alert Areas Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Kimpton STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of Kimpton STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. 	This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Little Berkhamsted STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Little Berkhamsted STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of Little Berkhamsted STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are	Low

	recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Little Berkhamsted STW catchment is designated either AONB or National Park.	Low

1.161. LITTLE COMPTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 1 no. SSSI and/or NNR sites Cross Hands Quarry, Site of Special Scientific Interest As a whole 0% of LITTLE COMPTON STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the LITTLE COMPTON STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low

This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) , Allotments	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low

Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Littleworth STW catchment is designated either AONB or National Park.	Low

1.166. Longborough STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 1 no. SSSI and/or NNR sites New Park Quarry, Site of Special Scientific Interest As a whole 0% of Longborough STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Longborough STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 3 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries.	Low

	Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Longborough STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Longborough STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of Longborough STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of LONGWATER LANE STW catchment, is designated either at an International, National or Local level. Intersects 2 areas of Priority Habitat which makes up 5 % of the LONGWATER LANE STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the	Low

	environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of LONGWATER LANE STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Blackwater At Camberley And Sandhurst, Flood Warning Areas River Blackwater And The Cove Brook, Flood Alert Areas Of the total area of the catchment, 100 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of LONGWATER LANE STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Low
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of LONGWATER LANE STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of LONGWATER LANE STW catchment is designated either AONB or National Park.	Low

Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 2 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Maple Lodge STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 1, Soil grade 1 As a whole 100 % of Maple Lodge STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	High
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Maple Lodge STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Low

	Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Maple Lodge STW catchment is designated either AONB or National Park.	Low

1.177. Markyate STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Chilterns Beechwoods, Special Area of Conservation (SAC)	Medium

	Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Markyate STW catchment, is designated either at an International, National or Local level. Intersects 1 areas of Priority Habitat which makes up 16 % of the Markyate STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 2 no. Noise Important Areas within the catchment.	Low

Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A	Medium

	breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 1 no. SSSI and/or NNR sites New Park Quarry, Site of Special Scientific Interest As a whole 0% of Mollington catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Mollington catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 3 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Mollington catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Mollington catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have	Medium

	the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Mollington catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) , Playing fields	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty Cotswolds, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of Mollington catchment is designated either AONB or National Park. Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: Ingrebourne River, Watercourses River Ingrebourne At Harold Park, Flood Warning Areas River Ingrebourne At Harold Park And Hornchurch, Flood Alert Areas Of the total area of the catchment, 14 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a Urban, Urban Land As a whole 100 % of Nags Head Lane STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have	Medium

	the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 1 no. areas designated as Air Quality Management Area as follows: Havering Aqma, AQMA AQMAs constitute 46 % area of Nags Head Lane STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 1 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 1 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) Maylands Field, Public park	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 1 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	High
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Nags Head Lane STW catchment is designated either AONB or National Park.	Low

1.193. Nettlebed STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below;	Medium

	Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Aston Rowant, Special Area of Conservation (SAC) Within 2km there are 3 no. SSSI and/or NNR sites Priest'S Hill, Site of Special Scientific Interest Bix Bottom, Site of Special Scientific Interest Berrick Trench, Site of Special Scientific Interest As a whole 0% of Nettlebed STW catchment, is designated either at an International, National or Local level. Intersects 1 areas of Priority Habitat which makes up 85 % of the Nettlebed STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Nettlebed STW catchment 0% is classified as urban.	Low

Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Nuneham Courtenay STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Nuneham Courtenay STW catchment is designated either AONB or National Park.	Low

1.198. Oxford STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Oxford Meadows, Special Area of Conservation (SAC) Cothill Fen, Special Area of Conservation (SAC) Little Wittenham, Special Area of Conservation (SAC) Within 2km there are 2 no. SSSI and/or NNR sites Littlemore Railway Cutting, Site of Special Scientific Interest Iffley Meadows, Site of Special Scientific Interest As a whole 0% of Oxford STW catchment, is designated either at an International, National or Local level. Intersects 2 areas of Priority Habitat which makes up 6 % of the Oxford STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 8 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 1 religious grounds, 3 playing fields, 0 sports facility, 0 golf courses, 2 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 2 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Oxford STW catchment 40% is classified as urban.	Medium
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, less than 1 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium

Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Oxford STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 1 no. areas designated as Air Quality Management Area as follows: The City Of Oxford, AQMA AQMAs constitute less than 1 % area of Oxford STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Medium

Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of Ramsbury STW catchment is designated either AONB or National Park.	High

1.203. Reading STW Catchment

SEA Topic	Commentary	Sensitivity assigned

Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Reading STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Reading STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 4 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 3 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 1 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Reading STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Foudry Brook From Stratfield Mortimer To Green Park, Flood Warning Areas River Enborne And Foudry Brook, Flood Alert Areas Of the total area of the catchment, 11 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades:	Low

	As a whole 0 % of Reading STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Reading STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Reading STW catchment is designated either AONB or National Park. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Rusper STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land.	Low

	The catchment intersects the following Agricultural Land Classification Grades: As a whole 0 % of Rusper STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Rusper STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Rusper STW catchment is designated either AONB or National Park.	Low

1.209. Rye Common STW Catchment

SEA Topic	Commentary	Sensitivity assigned

Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 1 no. SSSI and/or NNR sites Basingstoke Canal, Site of Special Scientific Interest As a whole 0% of Rye Common STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Rye Common STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Selborne STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMA's constitute 0 % area of Selborne STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 2 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) East Hampshire Hangers, Special Area of Conservation (SAC) Coombe Wood And The Lythe, Site of Special Scientific Interest Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are	Low

	recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 1 areas designated as National Park South Downs, National Park As a whole 100 % of Selborne STW catchment is designated either AONB or National Park.	High

1.214. Sevenhampton STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Sevenhampton STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Sevenhampton STW catchment area.	Low
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low

Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Sevenhampton STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: , Watercourses Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Sherborne St John STW catchment is designated either AONB or National Park.	Low

1.219. Sherfield-on-Loddon STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Sherfield-on-Loddon STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Sherfield-on-Loddon STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following;	Low

	3 areas currently utilised for recreation or which benefit the community. This includes 1 allotments, 0 religious grounds, 1 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Sherfield-on-Loddon STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: Bow Brook, Watercourses Upper River Loddon, Flood Alert Areas Of the total area of the catchment, 99 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole less than 1 % of Sherfield-on-Loddon STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Sherfield-on-Loddon STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows:	Medium

	Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. SPAs, SACs and/or Ramsar sites Within 2km there are 3 no. SSSI and/or NNR sites Pamber Forest And Silchester Common, Site of Special Scientific Interest Ron Ward'S Meadow With Tadley Pastures, Site of Special Scientific Interest Decoy Pit , Pools & Woods, Site of Special Scientific Interest As a whole 11% of Silchester STW catchment, is designated either at an International, National or Local level. Intersects 5 areas of Priority Habitat which makes up 12 % of the Silchester STW catchment area.	High
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with	Low

	differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Silchester STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Enborne And Foudry Brook, Flood Alert Areas Of the total area of the catchment, 13 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 78 % of Silchester STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Silchester STW catchment. Intersects 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 1 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Pamber Forest And Silchester Common, Site of Special Scientific Interest Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Medium

Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Silchester STW catchment is designated either AONB or National Park.	Low

1.225. Slough STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 5 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Windsor Forest & Great Park, Special Area of Conservation (SAC) Burnham Beeches, Special Area of Conservation (SAC) Chilterns Beechwoods, Special Area of Conservation (SAC) South West London Waterbodies, Special Protection Area (SPA) Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Slough STW catchment, is designated either at an International, National or Local level. Intersects 13 areas of Priority Habitat which makes up 41 % of the Slough STW catchment area.	Medium

Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 15 areas currently utilised for recreation or which benefit the community. This includes 2 allotments, 0 religious grounds, 10 playing fields, 0 sports facility, 0 golf courses, 2 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 4 no. Noise Important Areas within the catchment.	Medium

There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Thame From Chiselhampton To Drayton St Leonard, Flood Warning Areas River Thame And Chalgrove Brook, Flood Alert Areas Of the total area of the catchment, 10 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Stadhampton STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Stadhampton STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) , Playing fields	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Stadhampton STW catchment is designated either AONB or National Park.	Low

1.230. Standon STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 2 no. SPAs, SACs and/or Ramsar sites	Medium

	Lee Valley, RAMSAR site Lee Valley, Special Protection Area (SPA) Within 2km there are 1 no. SSSI and/or NNR sites Plashes Wood, Site of Special Scientific Interest As a whole 0% of Standon STW catchment, is designated either at an International, National or Local level. Intersects 2 areas of Priority Habitat which makes up 17 % of the Standon STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Standon STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium

Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar)	Medium

	Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Hartslock Wood, Special Area of Conservation (SAC) Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of Sulhamstead STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Sulhamstead STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Sulhamstead STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 100 % of Sulhamstead STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for	Low

	vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Sulhamstead STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Sulhamstead STW catchment is designated either AONB or National Park.	Low

Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a As a whole 2 % of Thame STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Thame STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Medium

	Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) , Playing fields	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Thame STW catchment is designated either AONB or National Park.	Low

1.246. THE STUBBLES ASHAMPSTEAD STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 1 no. SPAs, SACs and/or Ramsar sites Hartslock Wood, Special Area of Conservation (SAC)	Medium

	Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of THE STUBBLES ASHAMPSTEAD STW catchment, is designated either at an International, National or Local level. Intersects 2 areas of Priority Habitat which makes up 89 % of the THE STUBBLES ASHAMPSTEAD STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of THE STUBBLES ASHAMPSTEAD STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Thorpe Mandeville STW catchment is designated either AONB or National Park.	Low

1.251. TIDDINGTON STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites	Low

	Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of TIDDINGTON STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the TIDDINGTON STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 1 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 1 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of TIDDINGTON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a As a whole 100 % of TIDDINGTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of TIDDINGTON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes	Low

	Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)

Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites	Medium

	Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of UPPER HEYFORD STW catchment, is designated either at an International, National or Local level. Intersects 3 areas of Priority Habitat which makes up 22 % of the UPPER HEYFORD STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 4 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 2 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 1 public parks and 1 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of UPPER HEYFORD STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 1 statutory rivers / unnamed water bodies. Water environment features intersected include: Oxford Canal, Watercourses River Cherwell From Lower Heyford Down To Cherwell Bridge, Flood Warning Areas River Cherwell From Lower Heyford Down To And Including Oxford, Flood Alert Areas Of the total area of the catchment, 78 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 97 % of UPPER HEYFORD STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of UPPER HEYFORD STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Low

	Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 1 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of UPPER HEYFORD STW catchment is designated either AONB or National Park.	Low

1.257. Waddesdon STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 2 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 3, Soil grades 2 and 3a As a whole 41 % of Wash Water STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Wash Water STW catchment.	Low

	Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Wash Water STW catchment is designated either AONB or National Park.	Medium

1.262. Watlington STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites	Medium

	Aston Rowant, Special Area of Conservation (SAC) Chilterns Beechwoods, Special Area of Conservation (SAC) Little Wittenham, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Knightsbridge Lane, Site of Special Scientific Interest As a whole 0% of Watlington STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Watlington STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Watlington STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of Wheatley STW catchment is designated either AONB or National Park.	Low

1.267. WHITE RODING STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 0 no. SPAs, SACs and/or Ramsar sites	Low

	Within 2km there are 0 no. SSSI and/or NNR sites As a whole 0% of WHITE RODING STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the WHITE RODING STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of WHITE RODING STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Low
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a As a whole 100 % of WHITE RODING STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of WHITE RODING STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar)	Low

	Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 0 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of WILTON STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: River Kennet And Its Tributaries From Berwick Bassett Down To Newbury, Flood Alert Areas Of the total area of the catchment, 14 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a As a whole 100 % of WILTON STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of WILTON STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes	Low

	Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 1 Flood Alert Areas	Medium
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 1 areas designated as Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of WILTON STW catchment is designated either AONB or National Park.	High

1.273. Windsor STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 6 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Windsor Forest & Great Park, Special Area of Conservation (SAC) Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC)	Medium

	Burnham Beeches, Special Area of Conservation (SAC) South West London Waterbodies, Special Protection Area (SPA) Thames Basin Heaths, Special Protection Area (SPA) Within 2km there are 2 no. SSSI and/or NNR sites Wraysbury No. 1 Gravel Pit, Site of Special Scientific Interest Wraysbury & Hythe End Gravel Pits, Site of Special Scientific Interest As a whole 0% of Windsor STW catchment, is designated either at an International, National or Local level. Intersects 18 areas of Priority Habitat which makes up 78 % of the Windsor STW catchment area.	
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of WITNEY STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 1 Drinking Water Safeguard Zones Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	Medium
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and	Medium

	operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 20 % of WITNEY STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of WITNEY STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) , Allotments	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 0 % of WITNEY STW catchment is designated either AONB or National Park.	Low

1.278. Woking STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 4 no. SPAs, SACs and/or Ramsar sites South West London Waterbodies, RAMSAR site Thursley, Ash, Pirbright & Chobham, Special Area of Conservation (SAC) Thames Basin Heaths, Special Protection Area (SPA) South West London Waterbodies, Special Protection Area (SPA) Within 2km there are 1 no. SSSI and/or NNR sites Papercourt, Site of Special Scientific Interest As a whole 0% of Woking STW catchment, is designated either at an International, National or Local level. Intersects 7 areas of Priority Habitat which makes up 2 % of the Woking STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 1 golf courses, 0 public parks and 1 cemeteries. Also within the catchment are 0 areas where vulnerable population groups would be expected. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Worminghall STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 0 sensitive receptors (School and education centres, hospitals or residential care homes)	Low
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered; Intersects 0 areas designated as Area of Outstanding Natural Beauty	Low

	Intersects 0 areas designated as National Park	
	As a whole 0 % of Worminghall STW catchment is designated either AONB or National Park.	

1.283. Yattendon STW Catchment

SEA Topic	Commentary	Sensitivity assigned
Biodiversity	Infrastructure works can put pressure on sites designated for nature conservation and wider green infrastructure, particularly through construction impacts. Wider green infrastructure can however benefit from opportunities to deliver Biodiversity Net Gain through new development. Across England, there are sites internationally (SACs, SPAs, Ramsar sites) and nationally (e.g. SSSIs) designated for nature conservation. A breakdown of the sites designated for biodiversity within the wastewater catchment are as below; Intersects 0 Internationally designated sites (SPA, SAC, Ramsar) Intersects 0 Nationally designated sites (SSSI and NNR) Intersects 0 Locally designated sites (LNR) Within 10km there are 3 no. SPAs, SACs and/or Ramsar sites Hartslock Wood, Special Area of Conservation (SAC) Kennet & Lambourn Floodplain, Special Area of Conservation (SAC) River Lambourn, Special Area of Conservation (SAC) Within 2km there are 1 no. SSSI and/or NNR sites Coombe Wood, Frilsham, Site of Special Scientific Interest As a whole 0% of Yattendon STW catchment, is designated either at an International, National or Local level. Intersects 0 areas of Priority Habitat which makes up 0 % of the Yattendon STW catchment area.	Medium
Population and Human health	England has a growing population, with a general underlying trend towards an ageing population, though there are areas with younger population profiles. These demographic characteristics contribute to a complex pattern of highly-contrasting communities, with differing requirements for economic and social infrastructure. There is a role for the environment in enabling people to feel connected to place; and growing evidence that physical activity and access to nature and opportunities for community interaction is an important contributor to mental health and well-being. Sensitive receptors within the catchment have been identified and include the following; 2 areas currently utilised for recreation or which benefit the community. This includes 0 allotments, 1 religious grounds, 0 playing fields, 0 sports facility, 0 golf courses, 0 public parks and 0 cemeteries. Also within the catchment are 1 areas where vulnerable population groups would be expected. This includes 1 Schools and education centres, 0 hospitals, and 0 residential care homes. This is also reflected in the designation of 0 no. Noise Important Areas within the catchment.	Low
Material Assets	By their nature, wastewater catchments are anticipated to be relatively developed and contain a range of material assets. A high level characterisation of the extent to which material assets exist within a catchment is provided through understanding of the level of urbanisation within it. In respect of Yattendon STW catchment 0% is classified as urban.	Low
Water	Development related pollutants pose considerable risks to quality of water. Additional water demand from development will put further pressure on water resources. There are considerable pressures on water resources with resulting major impacts on many of the waterbodies across the UK. Water Quality and Flood Risk within this catchment is characterised by the following: Intersects 0 areas of Source Protections Zones 1 and 2 Intersects 0 Drinking Water Safeguard Zones	Low

	Intersects 0 statutory rivers / unnamed water bodies. Water environment features intersected include: Of the total area of the catchment, 0 % is covered by flood risk zones 2 or 3 and is therefore at elevated level of flood risk.	
Soil	Measures should be taken to avoid those areas of the highest quality agricultural soils and aim to protect soil and agricultural holdings through avoidance of impacts such as contamination or severance which might be expected through construction and operation of new infrastructure. Grades 1-3a are classed as the best and most versatile land. The catchment intersects the following Agricultural Land Classification Grades: Grade 2, Soil grades 2 and 3a Grade 3, Soil grades 2 and 3a As a whole 100 % of Yattendon STW catchment is classified as either Grades 1, 2 or 3 and therefore more likely to fall under a classification of Best and Most Versatile Land.	Medium
Air	Air quality has improved in the UK over the last sixty years as a result of the switch from coal to gas and electricity for heating of domestic and industrial premises, stricter controls on industrial emissions, higher standards for the composition of fuel and tighter regulations on emissions from motor vehicles. Construction practices in particular have the potential to increase pressure on air quality locally with knock on consequences for vulnerable population groups and biodiversity. The catchment is characterised as follows; Intersects 0 no. areas designated as Air Quality Management Area as follows: AQMAs constitute 0 % area of Yattendon STW catchment. Intersects 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Intersects 0 no. sensitive receptors. This includes 0 Schools and education centres, 0 hospitals, and 0 residential care homes Intersects 0 no areas utilised for recreation or which benefit the community. This includes 0 Allotments, 0 religious grounds, 0 playing fields, 0 sports facility, 0 golf course, 0 public park and 0 cemeteries Within 200 meters, there are 0 Nature Conservation sites (SAC, SPA, SSSI, NNR or Ramsar) Within 200 meters, there are 1 sensitive receptors (School and education centres, hospitals or residential care homes) Yattendon Church Of England Primary School, Schools and Education centres	Medium
Climate factors	Climate change represents a considerable and growing challenge for the UK which is more frequently associated with increased flood risk. The UK also anticipate hotter, drier summers; warmer, wetter winters; and rising sea levels. The catchment is characterised as follows: Intersects 0 Communities at Risk Areas (flooding) Contains 0 Flood Warning Areas Contains 0 Flood Alert Areas	Low
Cultural heritage	There is a substantial cultural heritage resource across England; however, there is considerable variation in the condition and integrity of assets and are at risk from infrastructure development where not sensitively considered. Those cultural heritage assets of the greatest recognition in England are World Heritage Sites. These sites are recognised as having Outstanding Universal Value. The World Heritage Sites and other cultural heritage designations in relation to this catchment are outlined below; Intersects 0 World Heritage Sites Intersects 0 Listed Buildings Intersects 0 areas designated as Scheduled Monuments Intersects 0 areas designated as Registered parks and gardens Intersects 0 areas designated as Registered Battlefields Within 500 meters, there are 0 World Heritage Sites	Low
Landscape	There are marked contrasts in the quality, character and distinctiveness of landscapes across England. There is a need to fully protect the highest quality locations, whilst integrating best practice principles through all infrastructure development in addressing pressures on landscape environments. In this catchment the following landscape designations have been considered;	High

	Intersects 1 areas designated as Area of Outstanding Natural Beauty North Wessex Downs, Area of Outstanding Natural Beauty Intersects 0 areas designated as National Park As a whole 100 % of Yattendon STW catchment is designated either AONB or National Park.

Glossary

Term	Description
1 in 30-year storm	A storm that has a 1 in 30 chance (3.33% probability) of being equalled or exceeded in any given year. This does not mean that a 30-year flood will happen regularly every 30 years, or only once in 30 years.
1 in 50-year storm	A storm that has a 1 in 50 chance (2% probability) of being equalled or exceeded in any given year. This does not mean that a 50-year flood will happen regularly every 50 years, or only once in 50 years.
Asset Management Plan (AMP)	A five-year planning cycle used by English and Welsh water industry regulators to set allowable price increases for privately owned water companies and for the assessment of performance indicators such as water quality and customer service.
Baseline Risk And Vulnerability Assessment (BRAVA)	Following Risk Based Catchment Screening (RBCS), more detailed risk assessments on those catchments where we believed there was an adverse risk to performance over time. We modelled their performance to 2020 (baseline), 2030, 2035 and 2050.
Business Plan	Business Plans are produced by water companies every 5 years. They set out their investment programme to ensure delivery of water and wastewater services to customers. These plans are drawn up through consultation with the regulators, stakeholders and customers and submitted to Ofwat for detailed scrutiny and review.
Catchment Strategic Plans (CSPs)	Summary reports to promote system thinking across large wastewater catchments. These provide early sight of our final plans enabling co-authoring opportunities for our stakeholders. Each document outlines the challenges that the catchment will face in the future and the long-term plans to address these issues.
Combined sewer	A sewer designed to receive both wastewater and surface water from domestic and industrial sources to a treatment works in a single pipe.
Customer Challenge Group (CCG)	An independent body that challenges both our current performance and our engagement with customers on building our future plans.
Cycle 1 and Cycle 2 DWMP	Our current DWMP is referred to as Cycle 1, it covers a planning period of 2025-2050. Our next plan will be published in five years' time and is referred to as our Cycle 2 DWMP, it will cover a planning period of 2030-2055.
Department for Environment, Food and Rural Affairs (Defra)	UK government department responsible for safeguarding the natural environment, food and farming industry, and the rural economy.
Drainage and Wastewater Management Plan (DWMP)	A Drainage and Wastewater Management Plan (DWMP) is 'a long-term strategic plan that sets out how wastewater systems, and the drainage networks that impact them, are to be extended, improved and maintained to ensure they are robust and resilient to future pressures'. The planning period is 25 years, from 2025 to 2050. DWMP is iterated every five years; the first known as 'Cycle 1', published as a final plan in May 2023.
dDWMP	The draft version of the Drainage and Wastewater Management Plan, published in June 2022 ¹ .
fDWMP	The final version of the Drainage and Wastewater Management Plan, to be published in May 2023.

¹ <https://www.thameswater.co.uk/about-us/regulation/drainage-and-wastewater-management>

Dry Weather Flow (DWF)	Dry Weather Flow is the average daily flow to a Sewage Treatment Works (STW) during a period without rain.
Environment Agency (EA)	UK government agency whose principal aim is to protect and enhance the environment in England and Wales.
EA Pollution Categories 1 to 3	Category 1 incidents have a serious, extensive or persistent impact on the environment, people or property. Category 2 incidents have a lesser, yet significant, impact. Category 3 incidents have a minor or minimal impact on the environment, people or property with only a limited or localised effect on water quality. Further Ofwat guidance available here: WatCoPerfEPAMethodology v3-Nov-2017-Final.pdf (ofwat.gov.uk)
Event Duration Monitoring (EDM)	Event duration monitoring (EDM) measures the frequency and duration of storm discharges to the environment from storm overflows.
External hydraulic sewer flooding	External flooding occurs within the curtilage of a property due to hydraulic sewer overload. Further Ofwat guidance available here: Reporting-guidance-sewer-flooding.pdf (ofwat.gov.uk)
Foul sewer	A foul sewer is designed to carry domestic or commercial wastewater to a sewage works for treatment. Typically, it takes wastewater from sources including toilets, baths, showers, kitchen sinks, washing machines and dishwashers from residential and commercial premises.
Grey infrastructure	New sewers, sewer upsizing and attenuation storage to provide additional capacity in the wastewater networks. Also covers new pumping stations, rising mains and/or civil structures at STWs.
Green infrastructure	Sustainable surface water management solutions, including sustainable drainage systems (SuDS), that are designed to mimic naturally draining surfaces. Typically applied to surface water or combined sewerage systems, but can also be applied to land, highway or other forms of surface drainage.
Historic England (HE)	A non-departmental public body of the government whose aim is to protect the historical environment of England by preserving and listing historic buildings, ancient monuments.
Hydraulic overload	Hydraulic overload occurs when a sewer or sewerage system is unable to cope with the receiving flow.
Internal hydraulic sewer flooding	Flooding which enters a building or passes below a suspended floor caused by flow from a sewer. Further Ofwat guidance available here: Reporting-guidance-sewer-flooding.pdf (ofwat.gov.uk)
L2 Area (Strategic Planning Area)	An aggregation of level 3 catchments (tactical planning units) into larger level 2 strategic planning areas. The level 2 strategic planning areas allow us to describe strategic drivers for change (relevant at the level 2 strategic planning area scale) as well as facilitating a more strategic level of planning above the detailed catchment assessments.
L3 Catchment (Tactical Planning Unit)	Geographical area in which a wastewater network drains to a single STW. Stakeholders may be specifically associated with this area. Includes for surface water sewerage that may exist which serves the wastewater geographical area but drains to a water course.
Lead Local Flood Authorities (LLFAs)	LLFAs are Risk Management Authorities as defined by the Flood and Water Management Act 2010. They have statutory duties with respect to flood risk management, investigating flooding and the compilation of surface water management plans.

Long-Term Delivery Strategy (LTDS)	A requirement by Ofwat on water companies, to ensure that short term expenditure meets long term objectives for customers, communities, and the environment. These will be submitted as part of the Price Review.
Misconnections	Misconnections are where either surface water drainage or foul water is connected to the wrong system e.g., surface water to foul only or foul to surface water systems.
Natural capital accounting	The process of calculating the total stocks and flows of natural resources in a given system, either in terms of monetary value or in physical terms.
Natural England (NE)	A non-departmental public body sponsored by the Department for Environment, Food and Rural Affairs to protect the natural environment in England, helping to protect England's nature and landscapes.
Non-governmental organisation (NGO)	An organisation that operates independently of any government, typically one whose purpose is to address a social or political issue.
Options Development and Appraisal (ODA)	A method to focus the level of planning effort, i.e., proportionate to the risks identified, with a view to providing a measure of consistency across the industry.
Ofwat	The regulatory body responsible for economic regulation of the privatised water and wastewater industry in England and Wales.
PR24	Every five years, water companies set out their plans for what they'll deliver and how much they'll charge customers². Their plans over the next five years should include how they will: • Provide a safe and clean water supply • Provide efficient sewerage pumping and treatment services • Control leaks • Install meters • Maintain pipes and sewers • Maintain and improve environmental standards This process is known as the price review, and the next one will be in 2024, when Ofwat will make its final decisions. We call this PR24.
Risk-Based Catchments Screening (RBCS)	A first-pass screening exercise of catchment vulnerability against 17 different risk indicators. To understand which catchments are low risk catchments and those that are likely to be at risk in the future if not supported by our long-term plan.
Risk Management Authorities (RMAs)	Authorities responsible for Flood Risk as defined in the Flood and Water Management Act 2010. These include, Lead Local Flood Authorities, Highway Authorities, Local Planning Authorities, Natural England and the Environment Agency.
Sewage Treatment Works (STW)	A sewage treatment works receives and treats wastewater to a standard legally agreed with the Environment Agency, before it is released back into the environment.
Specific, Measurable, Achievable, Relevant, and Time-Bound (SMART)	A framework for setting effective targets.
Storm overflow discharges	Storm overflows are used to manage excess flows, which typically occur as a result of heavy rainfall. Excess flow that may otherwise have caused flooding is released through a designated outfall to a water course, land area or alternative drainage system.

² <https://www.ccwater.org.uk/priorities/price-review/>

Strategic Environmental Assessment (SEA)	A systematic decision support process to ensure that environmental and other sustainability aspects are considered effectively in policy, plan and programme making.
Surface water sewer	A surface water sewer collects rainwater from domestic and commercial roofs, driveways, patios etc to a local watercourse or suitable surface water drainage system.
Sustainable Drainage systems (SuDS)	Drainage solutions that provide an alternative to the direct channelling of surface water through networks of pipes and sewers to nearby watercourses. SuDS aim to reduce surface water flooding, improve water quality, and enhance the amenity and biodiversity value of the environment. SuDS achieve this by lowering flow rates, increasing water storage capacity and reducing the transport of pollution to the water environment.
Thames Regional Flood and Coastal Committee (TRFCC) area	The TRFCC area was established by the Environment Agency under the Flood and Water Management Act 2010 that brings together members representing the Constituent Authority. Featured TRFCCs are listed here on our DWMP portal: Drainage and Wastewater Management Plan (arcgis.com)
Water Industry National Environmental Programme (WINEP)	The framework under which Defra and the EA require environmental improvements to be delivered by water companies. Guidance is released by regulators, which water companies interpret for their geographical area, and resubmit the outputs back to regulators for endorsement.

We've developed a comprehensive document suite to share our final DWMP. This includes five summary documents that contain increasing levels of detail. To help you to navigate around our document suite and to find key DWMP content, we provide a Navigation index below and on our DWMP webpage. The orange cells refer to where key DWMP content can be found across our final document suite.
