

Climate change policy

Climate change policy

Policy no. POL013

Purpose

The Executive Risk Committee has approved this Climate change policy (the “policy”) to set out the principles for managing the unavoidable impact of climate change on our business (‘adaptation’), combined with a reduction in our greenhouse gas emissions (‘mitigation’), to respond to the challenges that climate change represents.

Implementation of this policy and supporting standards, as part of our Enterprise Risk Management framework, will help to mitigate the principal risks of “we fail to protect biodiversity and mitigate the effect of climate change and population growth” and “we fail to engage, and gain the trust of, customers, communities and stakeholders in our plans”, where such failures may involve financial penalty, enforcement action and/or reputational damage.

This policy was approved on 31 May 2023 by the Executive Risk Committee.

Scope

This policy covers climate change regulation, obligations and commitments, managed by Thames Water Utilities Limited, and its associated subsidiaries. It applies to all Thames Water employees, contractors and business partners working with Thames Water.

Key principles - describing our approach

We’re committed to understanding the potential impact of climate change on our business and customer service. To develop resilient responses to minimise the impacts of climate change impact, we will:

- Continue to assess how climate change affects our operations and operational sites and develop appropriate responses.
- Incorporate the latest climate change understanding, such as the UKCP18 climate projections, into our business planning processes.
- Make sure climate change adaptation and resilience is appropriately reflected in our statutory Water Resource Management Plan.
- Make sure climate change adaptation and resilience is appropriately reflected in our Drainage and Wastewater Management Plan.
- Work with our business partners, contractors and supply chain to increase resilience to the impacts of climate change.
- Engage with and seek support from our customers for our adaptation, mitigation and resilience responses.

To minimise our carbon footprint and reduce our consumption of resources, we will:

- Work towards reducing our operational greenhouse gas emissions (carbon dioxide equivalent 'CO₂e') to net zero by 2030, and our ambition is to go beyond this by 2040.
- Continue working to reduce the amount of energy we take from the grid by delivering energy efficient solutions across all our activities.
- Aim to increase the amount of energy we generate and use from renewable sources to at least 517 GWh by 2025.
- Include embodied and operational carbon assessments in our Water Resource Management Plan and Drainage and Wastewater Management Plan and work to decarbonising our capital programmes.
- Work with our capital delivery partners and supply chain contractors to reduce our embodied carbon emissions.

Responsibilities

All employees, contractors and business partners are responsible for ensuring their actions are consistent with this policy.

Managers in relevant positions are responsible for communicating the details of this policy to employees, contractors and business partners, promoting a compliant working environment.

The Executive is responsible for conducting all business in line with this policy and our core values.

Sharing our progress

Doing the right thing for society and the environment is the responsibility of everyone working at and with Thames Water. We will make our employees, contractors, business partners and our wider supply chain aware of this policy and work with them to promote positive climate change responses.

We will calculate and annually report our greenhouse gas emissions in an open and transparent way.

We will report regularly to the Board on our performance against this policy and will share our plans and the progress made within our annual Sustainability Report.
